 **WARNING**

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

# 1 Safety Precautions

## 1.1 General Guidelines

### 1. IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by  in the Schematic Diagrams, Circuit Board Layout, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent X-RADIATION, shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

2. An Isolation Transformer should always be used during the servicing of AC Adaptor whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks. It will also protect AC Adaptor from being damaged by accidental shorting that may occur during servicing.
3. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
4. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
5. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.

## 1.2 Leakage Current Cold Check

1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
2. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the equipment such as screwheads, connectors, control shafts, etc. When the exposed metallic part has a return path to the chassis, the reading should be between  $1\text{ M}\Omega$  and  $5.2\text{ M}\Omega$ . When the exposed metal does not have a return path to the chassis, the reading must be infinity.

## 1.3 Leakage Current Hot Check (See Figure. 1)

1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
2. Connect a  $1.5\text{ k}\Omega$ ,  $10\text{ W}$  resistor, in parallel with a  $0.15\text{ }\mu\text{F}$  capacitor, between each exposed metallic part on the set and a good earth ground, as shown in Figure. 1.
3. Use an AC voltmeter, with  $1\text{ k}\Omega/\text{V}$  or more sensitivity, to measure the potential across the resistor.
4. Check each exposed metallic part, and measure the voltage at each point.
5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
6. The potential at any point should not exceed  $0.75\text{ V RMS}$ . A leakage current tester (Simpson Model 229 or equivalent) may be used to make the hot checks, leakage current must not exceed  $1/2\text{ mA}$ . In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the equipment should be repaired and rechecked before it is returned to the customer.

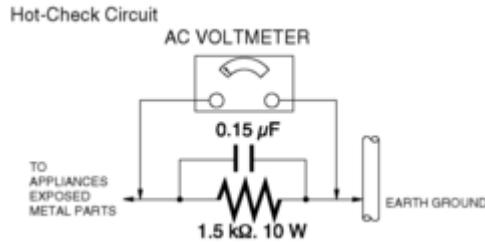

Figure. 1

## 1.4 How to Discharge the E.Capacitor on Flash P.C.B. Unit

### CAUTION:

- Be sure to discharge the E.Capacitor on Flash P.C.B. Unit before disassembling.
- Be careful of the high voltage circuit on Flash P.C.B. Unit when servicing.

### [Discharging procedure]

1. Put the insulation tube on the lead part of resistor (ERG5SJ102: 1kΩ / 5W).  
(An equivalent type of resistor may be used.)
2. Put the resistor between both terminals of E.Capacitor on the Flash P.C.B. Unit for approx. 5 seconds.
3. After discharging, confirm that the E.Capacitor voltage is lower than 10V by using a voltmeter.

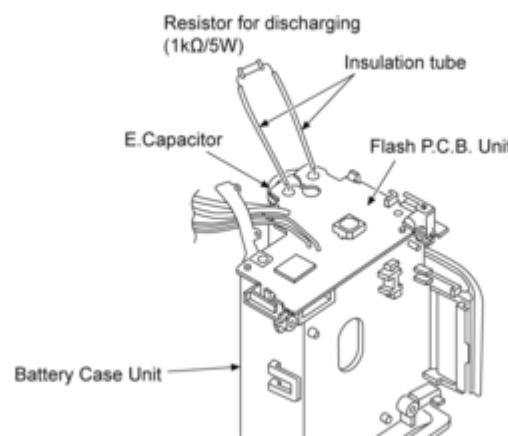

Fig. F1

## 2 Warning

### 2.1 Prevention of Electrostatic Discharge (ESD) to Electrostatically Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices.

Examples of typical ES devices are MOS image sensor, IC (integrated circuits) and some field-effect transistors and semiconductor "chip" components.

The following techniques should be used to help reduce the incidence of component damage caused by electrostatic discharge (ESD).

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any ESD on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging ESD wrist strap, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an antistatic solder removal device. Some solder removal devices not classified as "antistatic (ESD protected)" can generate electrical charge sufficient to damage ES devices.
5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

**CAUTION :**

Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity (ESD) sufficient to damage an ES device).

### 2.2 How to Recycle the Lithium Ion Battery (U.S. Only)

## ENGLISH

A lithium ion battery that is recyclable powers the product you have purchased. Please call 1-800-8-BATTERY for information on how to recycle this battery.

## FRANÇAIS

L'appareil que vous vous êtes procuré est alimenté par une batterie au lithium-ion recyclable. Pour des renseignements sur le recyclage de la batterie, veuillez composer le 1-800-8-BATTERY.

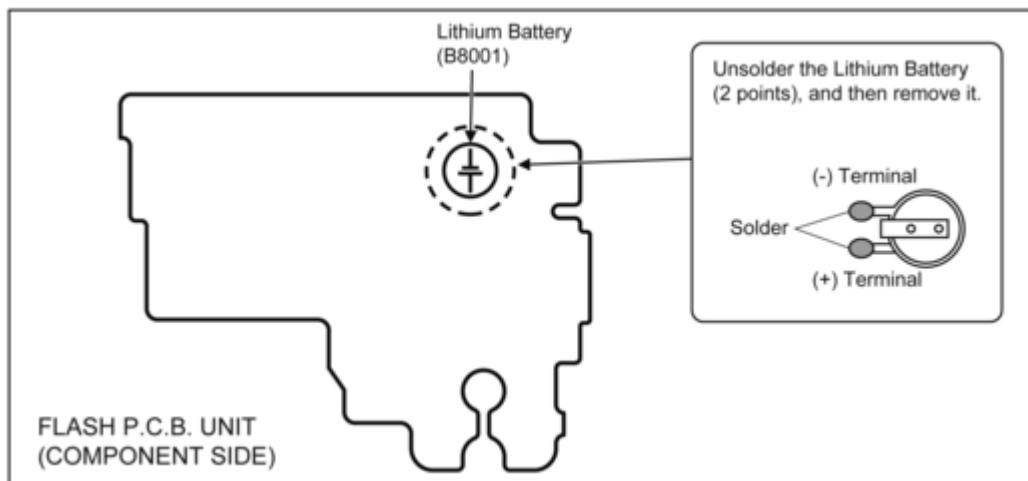

## 2.3 How to Replace the Lithium Battery

### 2.3.1 Replacement Procedure

1. Remove the Flash P.C.B. Unit. (Refer to Disassembly Procedures.)
2. Unsolder the each soldering point of electric lead terminal for Lithium battery (Ref. No. "B8001" at component side of Flash P.C.B. Unit) and remove the Lithium battery together with electric lead terminal. Then replace it into new one.

**NOTE:**

The Lithium battery includes electric lead terminals.

**NOTE:**

This Lithium battery is a critical component.

It must never be subjected to excessive heat or discharge.

It must therefore only be fitted in requirement designed specifically for its use.

Replacement batteries must be of same type and manufacture.

They must be fitted in the same manner and location as the original battery, with the correct polarity contacts observed.

Do not attempt to re-charge the old battery or re-use it for any other purpose.

It should be disposed of in waste products destined for burial rather than incineration.

**(For English)****CAUTION**

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

**(For German)****ACHTUNG**

Explosionsgefahr bei falschem Anbringen der Batterie. Ersetzen Sie nur mit einem äquivalentem vom Hersteller empfohlenem Typ.  
Behandeln Sie gebrauchte Batterien nach den Anweisungen des Herstellers.

**(For French)****MISE EN GARDE**

Une batterie de remplacement inappropriée peut exploser. Ne remplacez qu' avec une batterie identique ou d'un type recommandé par le fabricant. L'élimination des batteries usées doit être faite conformément aux instructions du manufacturier.

**NOTE:**

Above caution is applicable for a battery pack which is for DMC-FZ2000/FZ2500 series, as well.

## 2.4 Caution for AC Cord (For EB/GC/GH)

### 2.4.1 Information for Your Safety

**IMPORTANT**

Your attention is drawn to the fact that recording of pre-recorded tapes or discs or other published or broadcast material may infringe copyright laws.

**WARNING**

To reduce the risk of fire or shock hazard, do not expose this equipment to rain or moisture.

**CAUTION**

To reduce the risk of fire or shock hazard and annoying interference, use the recommended accessories only.

**FOR YOUR SAFETY****DO NOT REMOVE THE OUTER COVER**

To prevent electric shock, do not remove the cover. No user serviceable parts inside. Refer servicing to qualified service personnel.

### 2.4.2 Caution for AC Mains Lead

For your safety, please read the following text carefully.

This appliance is supplied with a moulded three-pin mains plug for your safety and convenience.

A 5-ampere fuse is fitted in this plug.

Should the fuse need to be replaced please ensure that the replacement fuse has a rating of 5 amperes and it is approved by ASTA or BSI to BS1362

Check for the ASTA mark or the BSI mark on the body of the fuse.

If the plug contains a removable fuse cover you must ensure that it is refitted when the fuse is replaced.

If you lose the fuse cover, the plug must not be used until a replacement cover is obtained.

A replacement fuse cover can be purchased from your local Panasonic Dealer.

If the fitted moulded plug is unsuitable for the socket outlet in your home then the fuse should be removed and the plug cut off and disposed of safely.

There is a danger of severe electrical shock if the cut off plug is inserted into any 13-ampere socket.

If a new plug is to be fitted please observe the wiring code as shown below.

If in any doubt, please consult a qualified electrician.

#### 2.4.2.1 Important

The wires in this mains lead are coloured in accordance with the following code:

Blue	Neutral
Brown	Live

As the colours of the wires in the mains lead of this appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The wire which is coloured BLUE must be connected to the terminal in the plug which is marked with the letter N or coloured BLACK.

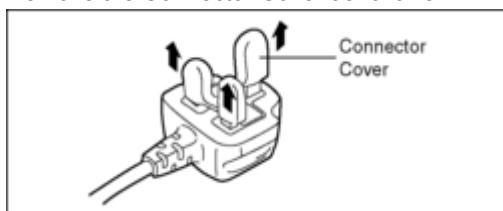

The wire which is coloured BROWN must be connected to the terminal in the plug which is marked with the letter L or coloured RED.

Under no circumstances should either of these wires be connected to the earth terminal of the three pin plug, marked with the letter E or the Earth Symbol.

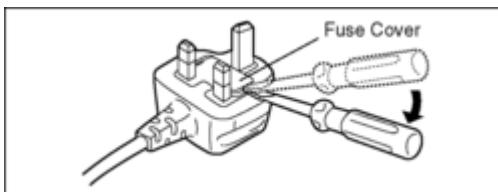

#### 2.4.2.2 Before Use

Remove the Connector Cover as follows.

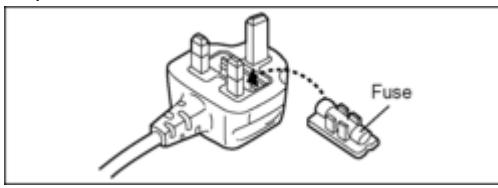

#### 2.4.2.3 How to Replace the Fuse

1. Remove the Fuse Cover with a screwdriver.

2. Replace the fuse and attach the Fuse cover.

# 3 Service Navigation

## 3.1 Introduction

This service manual contains technical information, which allow service personnel's to understand and service this model. Please place orders using the parts list and not the drawing reference numbers. If the circuit is changed or modified, the information will be followed by service manual to be controlled with original service manual.

## 3.2 Important Notice

### 3.2.1 About Lens Block

The image sensor (MOS) Unit which are connected to the lens unit with 3 screws, after performing the Optical tilt adjustment.

During servicing, if one of MOS Unit fixing screws are loosened, the Optical tilt adjustment must be performed. (About the Optical tilt adjustment, refer to the "10.3.2. Adjustment Specifications" for details.)

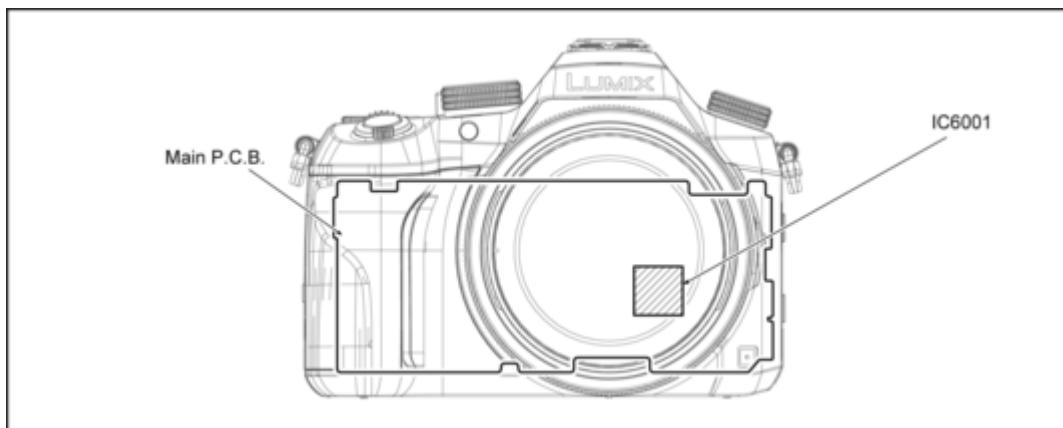

### 3.2.2 About Venus Engine (IC6001) [Located on the Main P.C.B.]:

The Venus Engine (IC6001) consists of two IC chips (DRAM and Venus) , which are fixed together with solder. (It's called, "Package On Package" type IC.)

When replacing, always replace in pairs. (Units of service parts: integrated (one pair) state.)

#### NOTE:

- During servicing, do not press down hard on the surface of IC6001.
- The pad pasted on surface of IC6001, paste on surface of the IC6001 without fail after the replacement.

### 3.2.3 About Flexible Cable and Connector

Do not touch carelessly so that the foreign body should not adhere to the terminal part of flexible cable and connector. Wipe off with a clean cloth and the cotton bud, etc. when the terminal part is dirty.

## 3.3 Service Notes

### 3.3.1 About Wi-Fi Function

The page number in this chapter does not show the page number of this service manual.

## What you can do with the Wi-Fi® function

### Controlling with a Smartphone/Tablet (P262)

Recording with a smartphone (P267)

Playing back pictures in the camera (P268)

Saving images stored in the camera (P268)

Sending images in the camera to an SNS (P269)

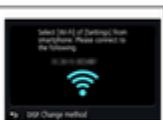

Writing location information on images stored in the camera (P269)

Combining motion pictures recorded with Snap Movie according to your preference on a smartphone (P271)

### Easy connection

You can easily set up a direct connection to your smartphone without entering a password.

### Displaying pictures on a TV (P272)

### Printing Wirelessly (P278)

### When sending images to AV device (P279)

You can send pictures and motion pictures to AV devices in your house (home AV devices).

### When sending images to PC (P280)

### Using Web services (P282)

You can send pictures and motion pictures to an SNS, etc. via "LUMIX CLUB".

By using [Cloud Sync. Service], you can receive pictures and motion pictures on a PC or smartphone.

### 3.3.2 Important Notice of Servicing

This camera unit has the personal information of wireless LAN connection the customer has registered.

For the protection of private information, please erase the personal information after the completion of repair by "Initial Settings".

In addition, please print out the following documents, and pass to the customer with the camera unit.

#### Printing Material [ Leaflet for Customer ]

## 3.4 General Description About Lead Free Solder (PbF)

The lead free solder has been used in the mounting process of all electrical components on the printed circuit boards used for this equipment in considering the globally environmental conservation.

The normal solder is the alloy of tin (Sn) and lead (Pb). On the other hand, the lead free solder is the alloy mainly consists of tin (Sn), silver (Ag) and copper (Cu), and the melting point of the lead free solder is higher approx.30°C (86°F) more than that of the normal solder.

#### Distinction of P.C.B. Lead Free Solder being used

The letter of "PbF" is printed either foil side or components side on the P.C.B. using the lead free solder.(See right figure)

PbF

#### Service caution for repair work using Lead Free Solder (PbF)

- The lead free solder has to be used when repairing the equipment for which the lead free solder is used. (Definition: The letter of "PbF" is printed on the P.C.B. using the lead free solder.)
- To put lead free solder, it should be well molten and mixed with the original lead free solder.

- Remove the remaining lead free solder on the P.C.B. cleanly for soldering of the new IC.
- Since the melting point of the lead free solder is higher than that of the normal lead solder, it takes the longer time to melt the lead free solder.
- Use the soldering iron (more than 70W) equipped with the temperature control after setting the temperature at  $350\pm30^{\circ}\text{C}$  ( $662\pm86^{\circ}\text{F}$ ).

#### **Recommended Lead Free Solder (Service Parts Route.)**

- The following 3 types of lead free solder are available through the service parts route.
  - SVKZ00001-----(0.3mm 100g Reel)
  - SVKZ00002-----(0.6mm 100g Reel)
  - SVKZ00003-----(1.0mm 100g Reel)

#### **Note**

\* Ingredient: Tin (Sn) 96.5%, Silver (Ag) 3.0%, Copper (Cu) 0.5%. (Flux cored)

## **3.5 How to Define the Model Suffix (NTSC or PAL model)**

There are seven kinds of DMC-FZH1/FZ2000/FZ2500 regardless of the colours.

- a) DMC-FZH1 (Japan domestic model)
- b) DMC-FZ2500P/PP
- c) DMC-FZ2000EB/EF/EG/EP
- d) DMC-FZ2500GK
- e) DMC-FZ2500GD
- f) DMC-FZ2500GN
- g) DMC-FZ2500GA/GC/GH

What is the difference is that the "Initial Settings" data which is stored in Flash-ROM mounted on Main P.C.B..

### **3.5.1 Defining methods:**

To define the model suffix to be serviced, refer to the nameplate which is putted on the bottom side of the unit.

**a) DMC-FZH1 (Japan domestic model)**

The nameplate for this model shows the following Safety registration mark.

**b) DMC-FZ2500P/PP**

The nameplate for these models show the following Safety registration mark.

**c) DMC-FZ2000EB/EF/EG/EP**

The nameplate for these models show the following Safety registration mark.

**d) DMC-FZ2500GK**

The nameplate for this model shows the following Safety registration mark.

**e) DMC-FZ2500GD**

The nameplate for this model shows the following Safety registration mark.

**f) DMC-FZ2500GN**

The nameplate for this model shows the following Safety registration mark.

**g) DMC-FZ2500GA/GC/GH**

The nameplate for these models do not show any above Safety registration mark.

**NOTE:**

After replacing the Main P.C.B., be sure to achieve adjustment.

### 3.5.2 Initial Settings:

After replacing the Main P.C.B. and/or Flash-ROM, make sure to perform the initial settings after achieving the adjustment by ordering the following procedure in accordance with model suffix of the unit.

**1. Important Notice:**

Before proceeding Initial settings, make sure to read the following CAUTION.

#### CAUTION:(Initial Settings)

---After Replacing the Main P.C.B. and/or Flash-ROM ---

[Except "EB/EF/EG and EP" models]

- \*. The model suffix can be chosen JUST ONE TIME.  
(Effective model suffix : "P/PP/GA/GC/GD/GH/GK/GN and JAPAN domestic model")
- \*. Once one of the model suffix has been chosen, the model suffix lists will not be displayed, thus, it can not be changed.

**2. Procedures:**

- Precautions: Read the above "CAUTION" carefully.
- Preparation:  
Attach the fully charged Battery, and insert the memory card.  
Remove the lens cap.
- **Step 1. The Temporary Cancellation of "Initial Settings":**  
Set the mode dial to "[ P ] (Program AE mode)", and drive mode dial to "[ Single ]".  
While keep pressing [ AF/AE LOCK ] button and [ DISP. ] button simultaneously, turn the power on.
- **Step 2. The Cancellation of "Initial Settings":**  
Press the [ Playback ] button in order to enter the [ Playback ] mode.

Press [ AF/AE LOCK ] button and “[ UP ] of Cursor buttons” simultaneously, then turn the power off. The LCD displays the “ ! ” mark before the unit powers down.

- **Step 3. Turn the Power on:**

Set the mode dial to [ P ] (Program AE Mode), then turn the power on.

- **Step 4. Display the Initial Settings:**

While pressing [ MENU/SET ] button and “[ RIGHT ] of Cursor buttons” simultaneously, turn the power off. The “Initial Settings” menu is displayed.

There are two kinds of “Initial Settings” menu form as follows:

[ CASE 1. After replacing the Main P.C.B. and/or Flash-ROM ]

When Main P.C.B. has just been replaced, 14 model suffixes are displayed as follows. (four pages in total)

INITIAL SETTINGS [Strict]			
(No existent model)	FZH1	NONE(JAPAN)	00
DMC-FZ2500P	FZ2500	P	01
DMC-FZ2500PP	FZ2500	PP	22
DMC-FZ2000EG	FZ2000	EG(A)	2A
	◀ Select	Set ▶	Exit

INITIAL SETTINGS [Strict]			
FZ2000	EB(A)	2D	DMC-FZ2000EB
FZ2500	GN	0B	DMC-FZ2500GN
FZ2500	GH	12	DMC-FZ2500GH
FZ2000	EP(A)	2B	DMC-FZ2000EP
	◀ Select	Set ▶	Exit

INITIAL SETTINGS [Strict]			
DMC-FZ2500GD	FZ2500	GD	04
DMC-FZ2500GC	FZ2500	GC(A)	05
DMC-FZ2500GK	FZ2500	GK	07
DMC-FZ2000EF	FZ2000	EF(A)	2C
	◀ Select	Set ▶	Exit

INITIAL SETTINGS [Strict]			
FZ2500	GA(A)	1B	DMC-FZ2500GA
FZH1	JPC	1D	DMC-FZH1 (Japan domestic model)
	◀ Select	Set ▶	Exit

[CASE 2. Other than “After replacing the Main P.C.B. and/or Flash-ROM”]

<Other than “EB/EP/EF/EG” models>

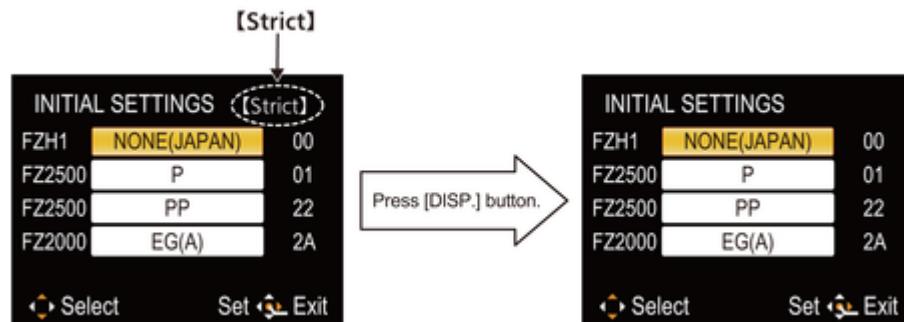

INITIAL SETTINGS [Strict]			
FZ2500	GC(A)	05	
	◀ Select	Set ▶	Exit

<Only “EB/EP/EF/EG” models>

INITIAL SETTINGS [Strict]			
FZ2000	EG(A)	2A	
FZ2000	EF(A)	2C	
FZ2000	EB(A)	2D	
FZ2000	EP(A)	2B	
	◀ Select	Set ▶	Exit

- **Step 5. Cancel “Strict” mode:**

Press the [ DISP. ] button to cancel “Strict” mode. (Confirm the “Strict” is disappeared.)

- **Step 6. Choose the Model Suffix in "Initial Settings": (Refer to "CAUTION")**

[Caution: After replacing the Main P.C.B. and/or Flash-ROM]

The model suffix can be chosen, **JUST ONE TIME**.

Once one of the model suffixes have been chosen, the model suffix lists will not be displayed, thus, it can not be changed.

Therefore, select the area carefully.

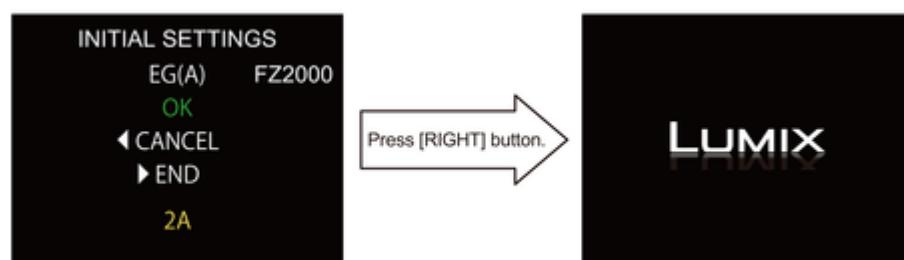

Select the area with pressing "[ UP ] / [ DOWN ] of Cursor buttons".

- **Step 7. Set the Model Suffix in "Initial Settings":**

Press the "[ RIGHT ] of Cursor buttons".

The only set area is displayed, and then press the "[ RIGHT ] of Cursor buttons" after confirmation.

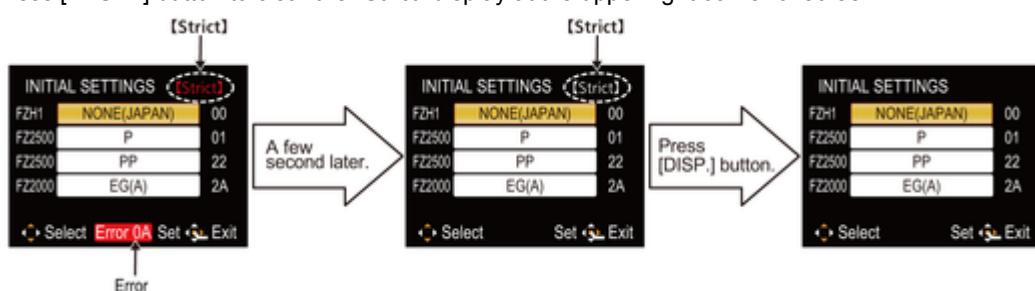

(The unit is powered off automatically.)

**NOTE:**

When the error message such as the following is displayed, cancel "Strict" mode.

Press [ DISP. ] button to clear the "Strict" display at the upper right corner of screen.

- **Step 8. Confirmation:**

Confirm the display of "PLEASE SET THE CLOCK" in concerned language when the unit is turned on again.

When the unit is connected to PC with USB cable, it is detected as removable media.

(When the "GK" model suffix is selected, the display shows "PLEASE SET THE CLOCK" in Chinese.)

As for your reference, major default setting condition is as shown in the following table.

- **Default setting (After "Initial Settings")**

	MODEL	VIDEO OUTPUT	LANGUAGE	DATE	REMARKS
a)	DMC-FZ2500P	NTSC	English	Month/Date/Year	

b)	DMC-FZ2500PP	NTSC	English	Month/Date/Year
c)	DMC-FZ2000EB	PAL	English	Date/Month/Year
d)	DMC-FZ2000EF	PAL	English	Date/Month/Year
e)	DMC-FZ2000EG	PAL	English	Date/Month/Year
f)	DMC-FZ2000EP	PAL	English	Date/Month/Year
g)	DMC-FZ2500GA	PAL	English	Date/Month/Year
h)	DMC-FZ2500GC	PAL	English	Date/Month/Year
i)	DMC-FZ2500GD	NTSC	Korean	Year/Month/Date
j)	DMC-FZ2500GH	PAL	English	Date/Month/Year
k)	DMC-FZ2500GK	PAL	Chinese (simplified)	Year/Month/Date
l)	DMC-FZ2500GN	PAL	English	Date/Month/Year
m)	DMC-FZH1JPC (Japan domestic model)	NTSC/PAL	NTSC/PAL Japanese/Chinese (simplified)	Year/Month/Date

# 4 Specifications

The following specification is for DMC-FZ2000EB.  
Some specifications may differ depending on model suffix.

**Digital Camera:**

Information for your safety

<b>Power Source:</b>	DC 8.4 V ( 8.4 V)
<b>Power Consumption:</b>	2.5 W (When recording with Monitor) 3.1 W (When recording with Viewfinder) 1.6 W (When playing back with Monitor) 1.7 W (When playing back with Viewfinder)
<b>Camera effective pixels</b>	20,100,000 pixels
<b>Image sensor</b>	1" MOS sensor, total pixel number 20,900,000 pixels, Primary colour filter
<b>Lens</b>	Optical 20× zoom, f = 8.8 mm to 176 mm (35 mm film camera equivalent: 24 mm to 480 mm) Wide: F2.8 to F11 Tele: F4.5 to F11
<b>ND filter</b>	[AUTO]/[1/4]/[1/16]/[1/64]/[OFF]
<b>Image Stabiliser</b>	Optical method
<b>Focus range</b>	
AF	30 cm (0.98 feet) (Wide)/1 m (3.3 feet) (Tele) to ∞
AF Macro/MF/ Intelligent Auto/ Motion Picture	3 cm (0.098 feet) (Wide)/1 m (3.3 feet) (Tele) to ∞
<b>Shutter system</b>	Electronic shutter+Mechanical shutter
<b>Minimum Illumination</b>	Approx. 9 lx [when i-Low light is used, the shutter speed is 1/30th of a second (When [System Frequency] is set to [59.94 Hz (NTSC)]) or 1/25th (When [System Frequency] is set to [50.00 Hz (PAL)])]
<b>Shutter speed</b>	
Still picture	B (Bulb) (Max. approx. 120 second), 60 to 1/4000th seconds (with the mechanical shutter) 1 to 1/16000th seconds (with the electronic shutter)
Motion picture	1/30th of a second to 1/16000th of a second (When [System Frequency] is set to [59.94 Hz (NTSC)])/ 1/25th of a second to 1/16000th of a second (When [System Frequency] is set to [50.00 Hz (PAL)])/ 1/24th of a second to 1/16000th of a second (When [System Frequency] is set to [24.00 Hz (CINEMA)]) 1/2th of a second to 1/16000th of a second (When [M] is selected in Creative Video Mode, MF)
<b>Exposure (AE)</b>	Programme AE (P)/Aperture-Priority AE (A)/ Shutter-Priority AE (S)/Manual Exposure (M)/AUTO
<b>Light metering mode</b>	Multiple/Centre weighted/Spot
<b>Monitor</b>	3.0" TFT LCD (3:2) (Approx. 1,040,000 dots) (field of view ratio about 100%) Touch screen
<b>Viewfinder</b>	OLED Live Viewfinder (4:3) (Approx. 2,360,000 dots) (field of view ratio about 100%) (with diopter adjustment -4 to +4 diopter)
<b>Flash</b>	Built-in pop up flash AUTO, AUTO/Red-Eye Reduction, Forced ON, Forced ON/ Red-Eye Reduction, Slow Sync., Slow Sync./Red-Eye Reduction, Forced OFF
<b>Microphone</b>	Stereo
<b>Speaker</b>	Monaural
<b>Recording media</b>	SD Memory Card/SDHC Memory Card <sup>1</sup> /SDXC Memory Card <sup>2</sup> (* UHS-I UHS Speed Class 3)
<b>Recording file format</b>	
Still Picture	RAW/JPEG (based on "Design rule for Camera File system", based on "Exif 2.3" standard, DPOF corresponding)
Motion pictures	AVCHD Progressive/AVCHD/MP4/MOV
Audio compression	AVCHD Dolby <sup>®</sup> Digital (2 ch) MP4 AAC (2 ch) MP4 (LPCM), MOV LPCM (2 ch)

Interface	
Digital	"USB 2.0" (High Speed) * Data from the PC can not be written to the camera using the USB connection cable.
Terminal	
[REMOTE]	Ø 2.5 mm jack
[MIC]	Ø 3.5 mm jack
Headphone	Ø 3.5 mm jack
[HDMI]	MicroHDMI Type D
USB	USB 2.0 Micro-B
Dimensions	Approx. 137.6 mm (W)×101.9 mm (H)×134.7 mm (D) [5.42" (W)×4.01" (H)×5.30" (D)]
Mass	Approx. 966 g/2.13 lb (with card and battery) Approx. 915 g/2.02 lb (excluding card and battery)
Operating temperature	0 °C to 40 °C (32 °F to 104 °F)
Operating humidity	10%RH to 80%RH
Wireless transmitter	
Compliance standard	IEEE 802.11b/g/n (standard wireless LAN protocol)
Frequency range used (central frequency)	2412 MHz to 2462 MHz (1 to 11ch)
Encryption method	Wi-Fi compliant WPA™/WPA2™
Access method	Infrastructure mode

**Battery Charger (Panasonic DE-A80A):**

Information for your safety

Input:	AC ~ 110 V~240 V 50/60 Hz 0.2 A
Output:	DC == 8.4 V 0.65 A

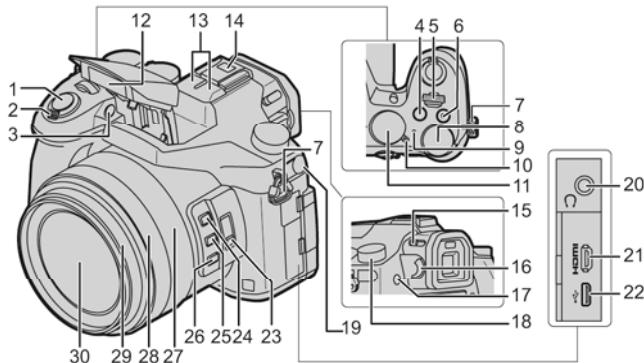

**Battery Pack (lithium-ion) (Panasonic DMW-BLC12E):**

Information for your safety

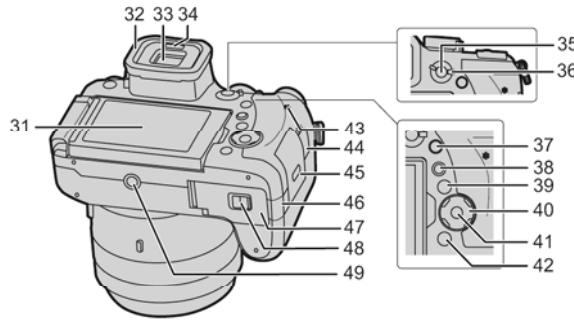

Voltage/capacity:	7.2 V/1200 mAh

- DC coupler cover (P69)
- When using an AC adaptor, ensure that the Panasonic DC coupler (DMW-DCC8: optional) and AC adaptor (DMW-AC10E: optional) are used.
  - Always use a genuine Panasonic AC adaptor (DMW-AC10E: optional).
  - When using an AC adaptor, use the AC mains Lead supplied with the AC adaptor.
- 46** Battery door (P14)
- 47** Release lever (P14)

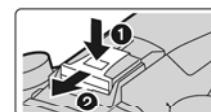

- Tripod mount
- It may not be possible to attach and securely fasten a tripod with a screw length of 5.5 mm (0.22 inch) or more to the camera. Doing so may also damage the camera.
- 49** •

- About the function button ([Fn8] to [Fn12])**
- Function buttons ([Fn8] to [Fn12]) (P23) are touch icons. Touch the [Fn] tab on the recording screen to display them.

**■ Removing the Hot Shoe Cover**

The camera comes with a hot shoe cover attached to the hot shoe.

Remove the hot shoe cover by pulling it in the direction indicated by arrow ② while pressing it in the direction indicated by arrow ①.

# 6 Service Mode

## 6.1 Error Code Memory Function

### 1. General description

This unit is equipped with history of error code memory function, and can be memorized 16 error codes in sequence from the latest. When the error is occurred more than 16, the oldest error is overwritten in sequence.

The error code is not memorized when the power supply is shut down forcibly (i.e., when the unit is powered on by the battery, the battery is pulled out) The error code is memorized to Flash-ROM when the unit has just before powered off.

### 2. How to display

The error code can be displayed by ordering the following procedure:

- Preparation

Attach the fully charged Battery, and insert the memory card.  
Remove the lens cap.

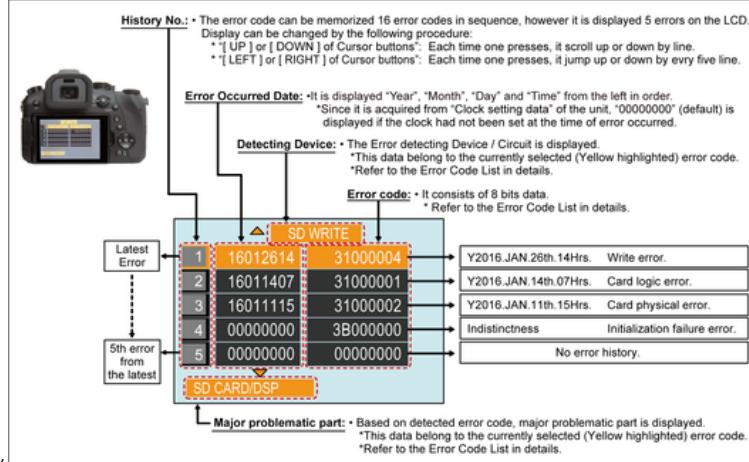

- Step 1. The Temporary Cancellation of "Initial Settings":

Set the mode dial to "[P]" (Program AE mode), and drive mode dial to "[Single]".  
While keep pressing [AF/AE LOCK] button and [DISP.] button simultaneously, turn the power on.

- Step 2. Execute the Error Code Display Mode:

While keep pressing [AF/AE LOCK] button, [MENU/SET] button and "[LEFT]" of Cursor buttons simultaneously.  
The display is changed as shown below when the above buttons are pressed simultaneously.

Normal display → Error code display → Camera information display → Normal display → ....

Example of Error Code Display

- Error Code List

The error code consists of 8 bits data and it shows the following information.

Attribute	Main item	Sub item	Error code		Contents	Error Indication		
			High 4 bits	Low 4 bits		Detecting device	Problematic Part/Circuit	
LENS	Lens drive	OIS	1C*0	1000	OIS Position sensor (X) error	OIS POS X	LENSu/LENS FPC	
				2000	OIS Position sensor (Y) error	OIS POS Y		
				3000	OIS GYRO sensor (X) error	OIS GYRO X	GYRO	
				4000	OIS GYRO sensor (Y) error	OIS GYRO Y		
				5000	OIS GYRO sensor (R) error	OIS GYRO R		
				6000	OIS drive voltage (X) error	OIS DRIVE X	LENSu/LENS FPC	
				7000	OIS drive voltage (Y) error	OIS DRIVE Y		
				8000	OIS GYRO-Digital communication error	OIS GYRO COMM	GYRO	
				0710	Collapsible barrel Low detect error	ZOOM L	ZOOMm/LENSu

#### Important notice about "Error Code List"

##### 1) About "0" indication:

The third digit from the left is different as follows.

- In case of 0 (example: 18 0 01000)  
When the third digit from the left shows "0", this error occurred under the condition of Initial Settings has been completed.  
It means that this error is occurred basically at user side.

- In case of 8 (example: 18 8 01000)  
When the third digit from the left shows "8", this error occurred under the condition of Initial Settings has been released.  
(Example: Factory assembling-line before unit shipment, Service mode etc.)  
It means that this error is occurred at service side.

##### 2) About "?" indication: ("18\*0 0?01" to "18\*0 0?60"):

The third digit from the right shows one of the hexadecimal ("0" to "F") character.

##### o Step 3. How to exit from Error Code display mode:

Simply, turn the power off. (Since Error code display mode is executed under the condition of temporary cancellation of "Initial Settings", it wake up with normal condition when turn off the power.)

##### NOTE:

The error code can not be initialized.

# 7 Troubleshooting Guide

## 7.1 Wi-Fi Module (Flash P.C.B. Unit)

### 7.1.1 How to Remove Wi-Fi Password Protection

To prevent incorrect operation or use of the Wi-Fi function by a third party and to protect saved personal information, this unit protects the Wi-Fi function with a password.

It is unable to service with password locked condition. When accepting for repair, the unit has been set the Wi-Fi password by customer, run the [ Reset Wi-Fi Settings ] for removing Wi-Fi password, then check the operation.

#### [Reset Procedure of Wi-Fi Settings]

1) Press the [ MENU/SET ] button, and select the [ SETUP ] mode by Cursor buttons.

Select [ Reset Wi-Fi Settings ] by Cursor buttons, then press the [ MENU/SET ] button.

2) Select [ YES ] and press the [ MENU/SET ] button.

(The [ Reset Wi-Fi Settings ] performs not only resetting Wi-Fi Password but also resetting other all Wi-Fi Settings.)

### 7.1.2 Checking of Trouble Caused by Wi-Fi Module or Not

The Wi-Fi Circuit works properly if the wireless access point (broadband router) name (SSID) in use is displayed on a screen of [ Manual Connection ].

#### (Primary Confirmation)

Confirm that the wireless access point (broadband router) works properly.

#### (Procedure)

1) Select [ Wi-Fi ] in [ Setup ] menu.

2) Select [ Wi-Fi Function ] in [ Wi-Fi ] menu.

3) Select [ New Connection ] in [ Wi-Fi ] menu.

4) Select optional function in [ Select a function ] menu, then select [ Via Network ] in [ Select connection method ] menu.

5) Select [ From List ] in [ Select connection method ] menu.

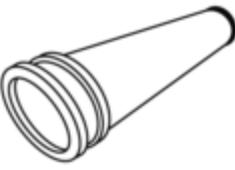

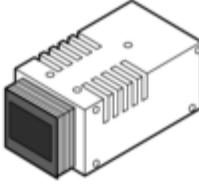

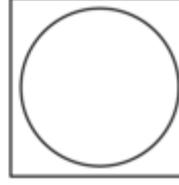

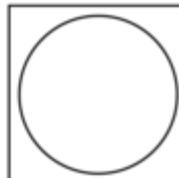

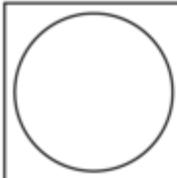

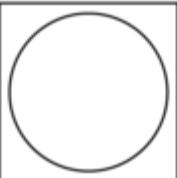

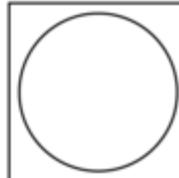

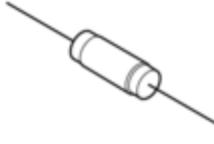

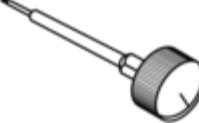

6) The Wi-Fi Circuit works properly if the wireless access point (broadband router) name (SSID) in use is displayed.

\*Change the Flash P.C.B. Unit, when the above checking detected the abnormal of Wi-Fi module.

# **8 Service Fixture & Tools**

## **8.1 Service Fixture and Tools**

The following Service Fixture and tools are used for checking and servicing this unit.

Collimator (built-in Focus Chart) RFKZ0422	Light Box (with DC Cable) RFKZ0523	ND Filter (ND0.3) RFKZ0513
		
ND Filter (ND0.6) VFK1164ND06	ND Filter (ND 0.9) VFK1164ND09	CC Filter (CC-C7.5) RFKZ0511
		
CC Filter (CC-Y10) RFKZ0512	LB Filter (LBB2) RFKZ0520	LB Filter (LBB8) RFKZ0521
		
Gray Card RFKZ0506	Gray Chart RFKZ0612	Resistor for Discharging (1kΩ/5W) ERG5SJ102
		
* An equivalent type of resistor may be used.		
Lens Cleaning Kit (BK) VFK1900BK	Driver (for Optical Tilt Adjustment) RFKZ0569	Optical Tilt Adjustment Chart RFKZ0570
		
* Only supplied 10 set/box.		
* T4 Torx type		
Camera Stand RFKZ0333J	Torque Driver RFKZ0542	Grease (for Lens) RFKZ0472
		

## 8.2 When Replacing the Main P.C.B.

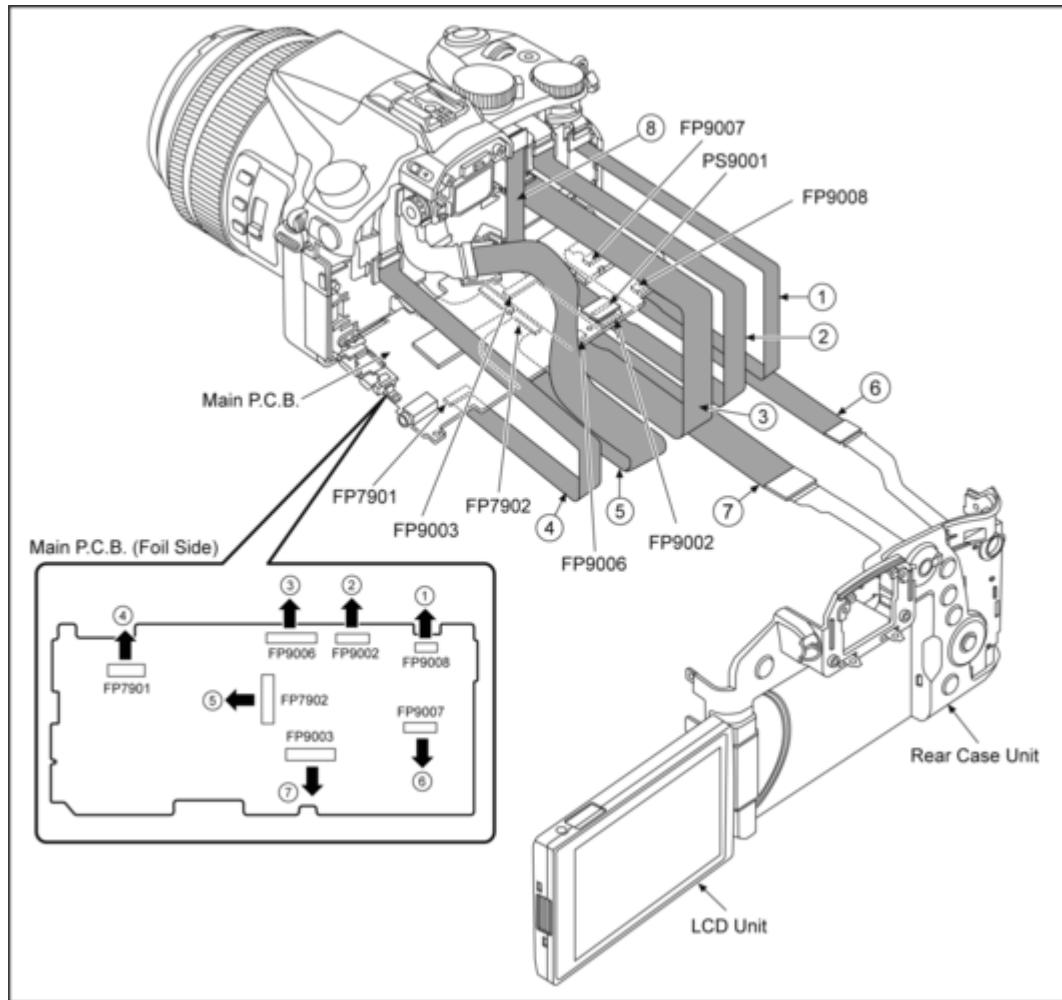

After replacing the Main P.C.B., be sure to achieve adjustment.

## 8.3 Service Position

This Service Position is used for checking and replacing parts. Use the following Extension cables for servicing.

Table S1 Extension Cable List

No.	Parts No.	Connection	Form
1	VFK1440	FP9008 (MAIN P.C.B.) ←→ DIAL ZOOM UNIT (TOP CASE UNIT)	10pin / 0.5 FFC
2	VFK1175	FP9002 (MAIN P.C.B.) ←→ TOP OPERATION UNIT (TOP CASE UNIT)	16pin / 0.5 FFC
3	VFK1492	FP9006 (MAIN P.C.B.) ←→ MULTI FPC UNIT	26pin / 0.5 FFC
4	VFK1950	FP7901 (MAIN P.C.B.) ←→ LENS UNIT	33pin / 0.3 FFC
5	RFKZ0477	FP7902 (MAIN P.C.B.) ←→ LENS UNIT	45pin / 0.3 FFC
6	VFK1175	FP9007 (MAIN P.C.B.) ←→ REAR OPERATION FPC (REAR CASE UNIT)	16pin / 0.5 FFC
7	RFKZ0477	FP9003 (MAIN P.C.B.) ←→ LCD UNIT	45pin / 0.3 FFC
8	VFK1870	PS9001 (MAIN P.C.B.) ←→ PP8001 (FLASH P.C.B. UNIT)	30pin B to B

### CAUTION. (When servicing Flash P.C.B. Unit)

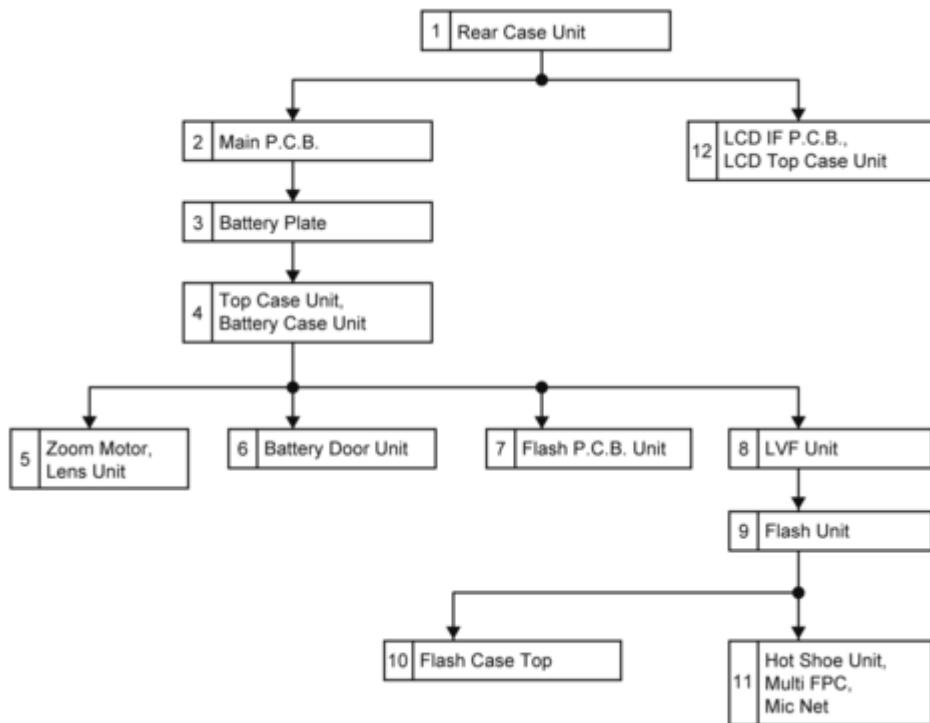

1. Be sure to discharge the E.Capacitor on Flash P.C.B. Unit.  
Refer to "How to Discharge the E.Capacitor on Flash P.C.B. Unit".  
The E.Capacitor voltage is not lowered soon even if the AC Cord is unplugged or the battery is removed.
2. Be careful of the high voltage circuit on Flash P.C.B. Unit.
3. DO NOT allow other parts to touch the high voltage circuit on Flash P.C.B. Unit.

# 9 Disassembly and Assembly Instructions

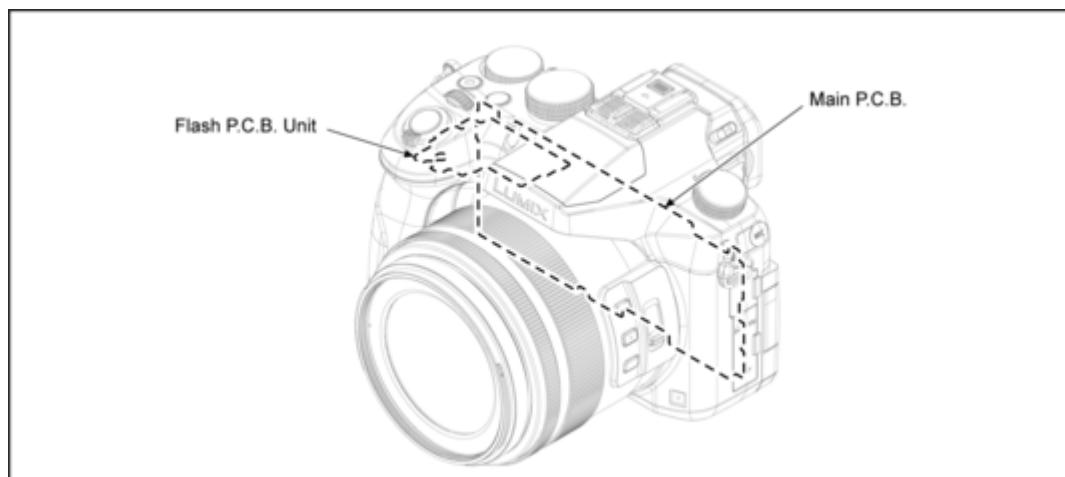

## 9.1 Disassembly Flow Chart

This is a disassembling chart.

When assembling, perform this chart conversely.

**NOTE:**

- When servicing and reassembling, remove the memory card and battery from the unit.
- Install the lens cap to prevent garbage and dust except when it is necessary.
- Do not reuse screws tightened to metal parts. Be sure to use new screws when assembling.

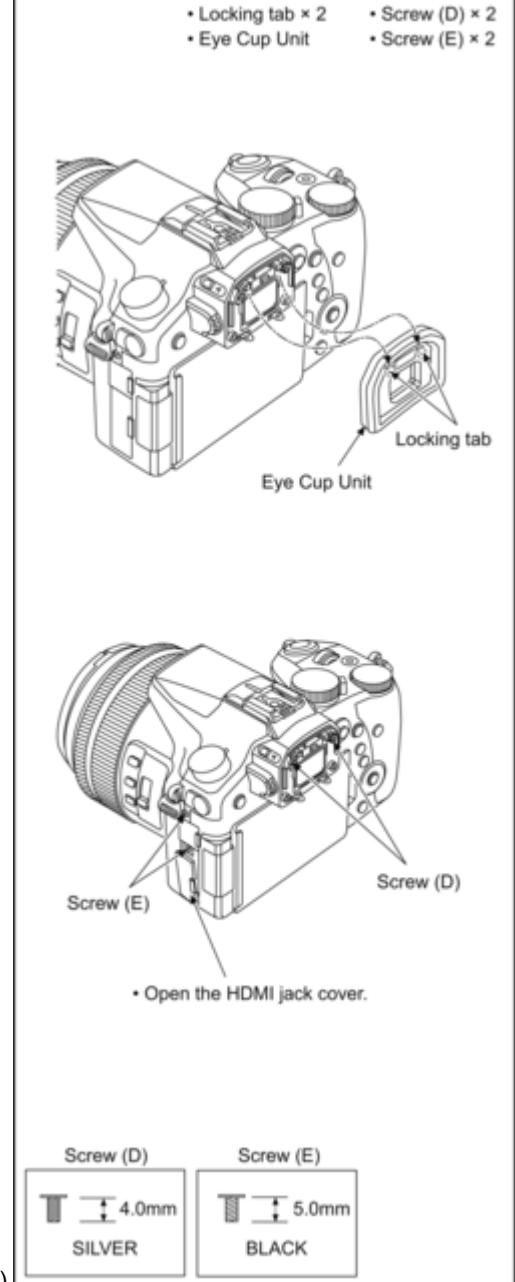

- Memory Card
- Battery

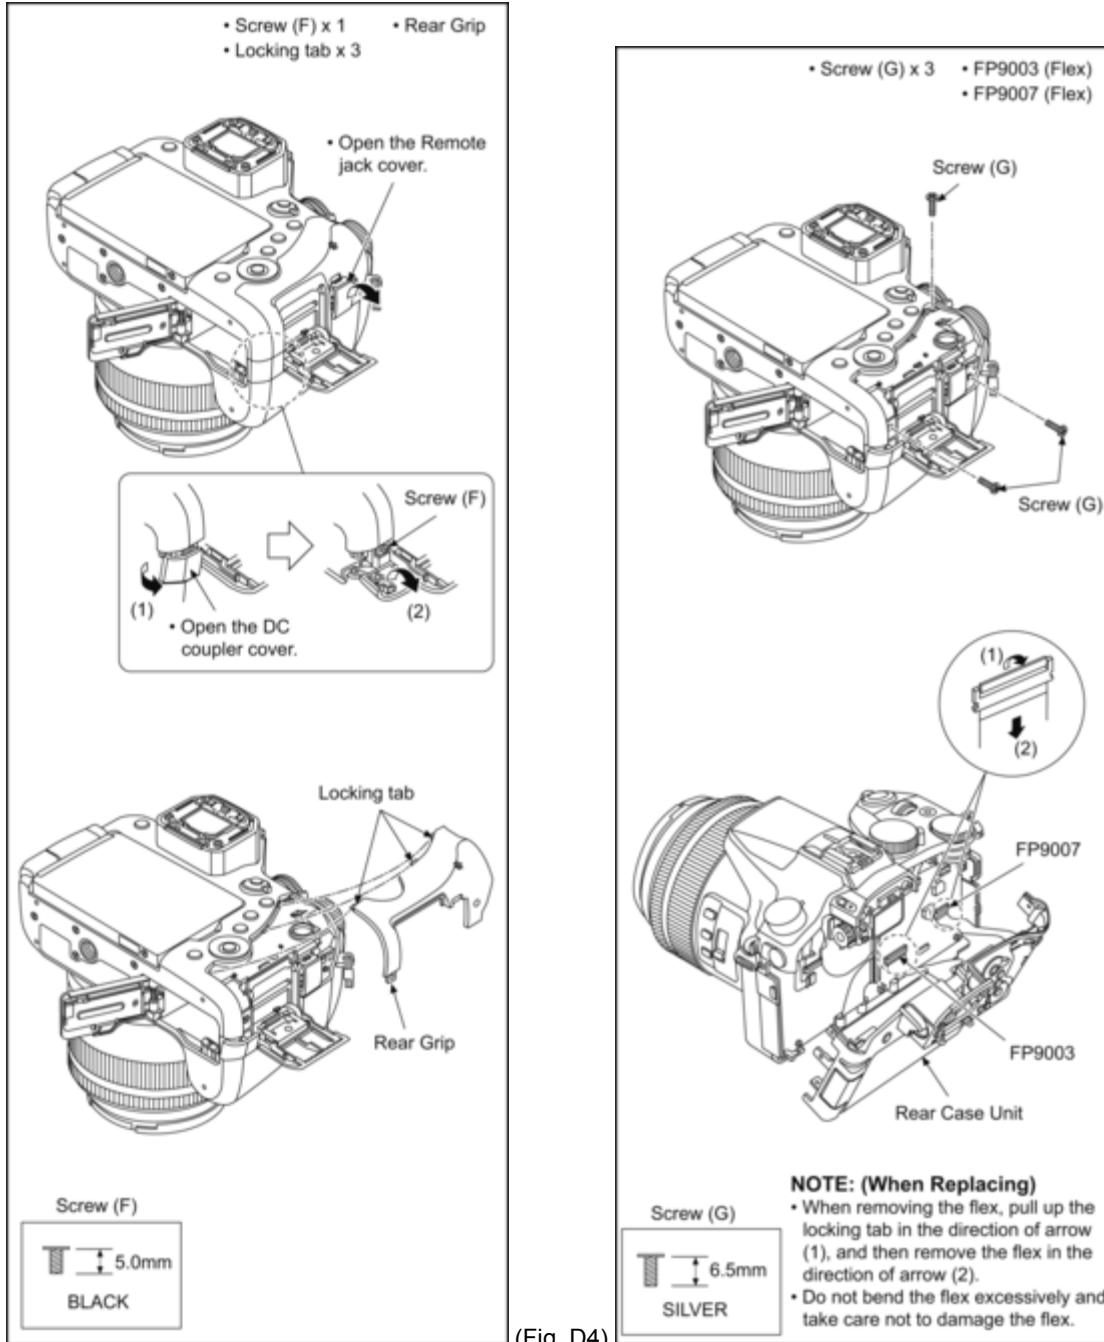

### 9.3.1 Removal of the Rear Case Unit

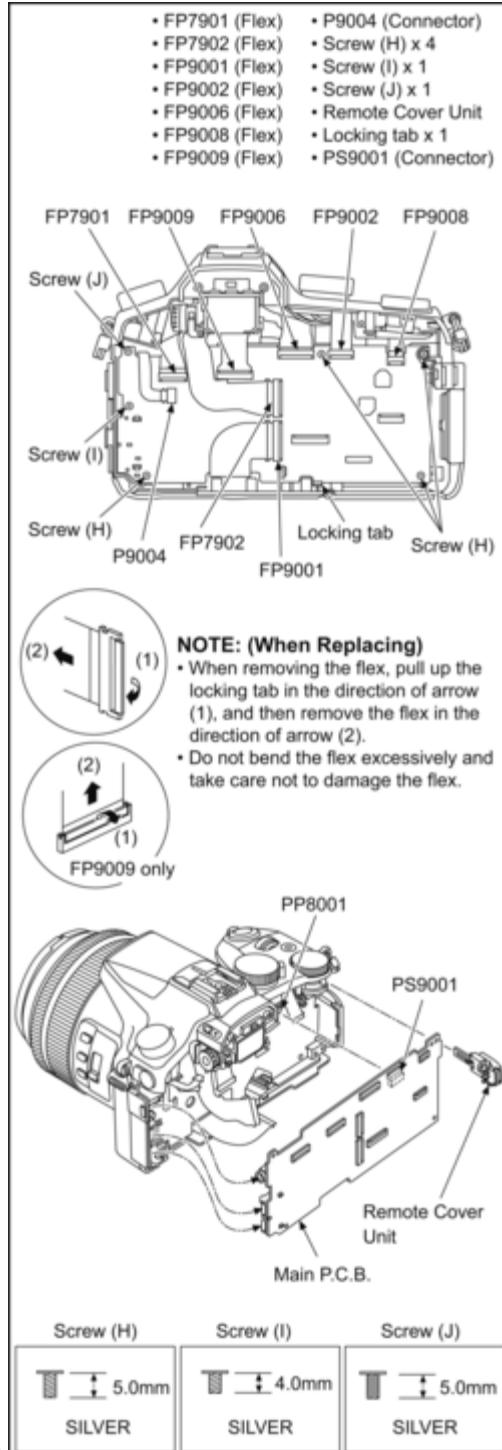

(Fig. D2)

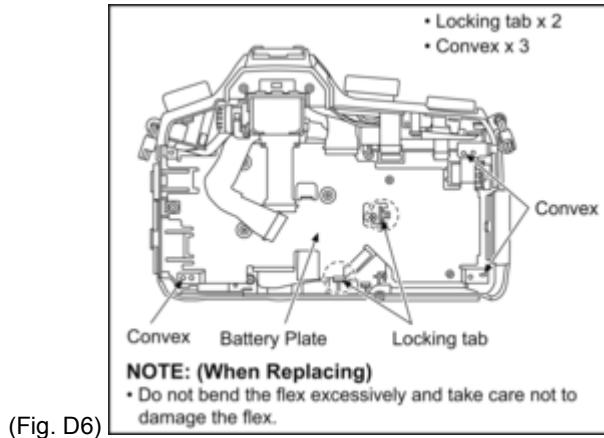

(Fig. D4)

### 9.3.2 Removal of the Main P.C.B.

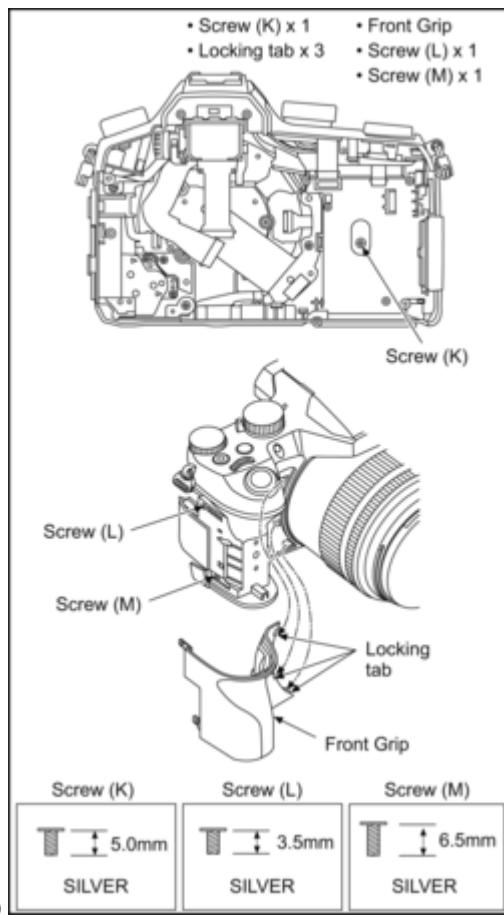

(Fig. D5)

### 9.3.3 Removal of the Battery Plate

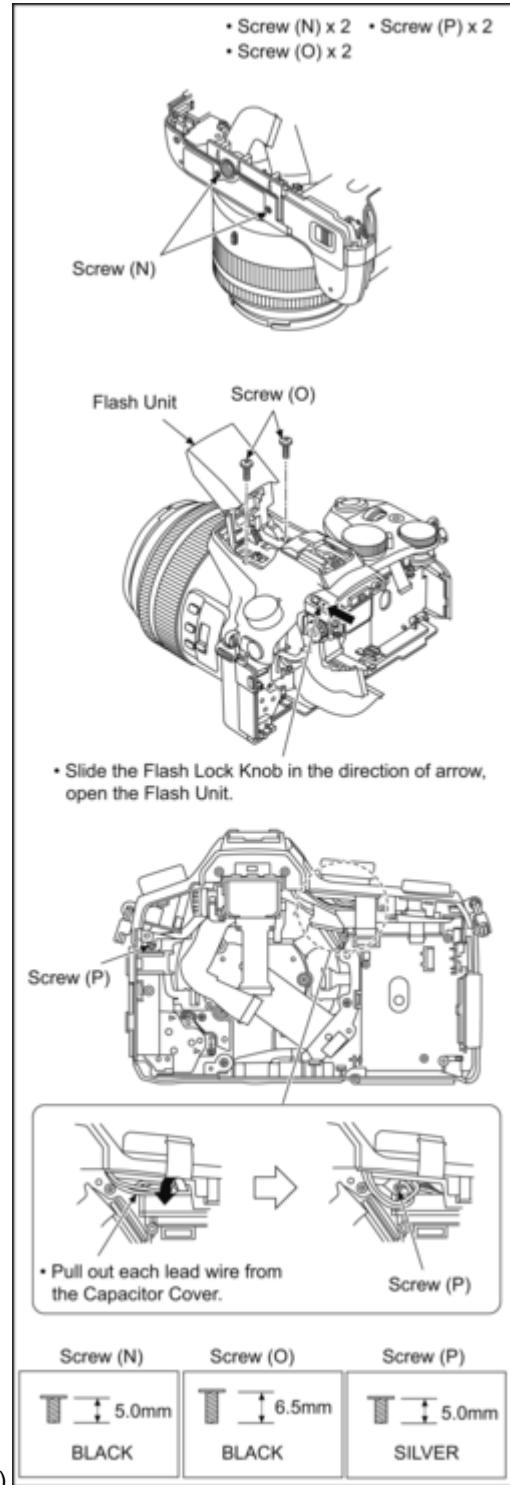

### 9.3.4 Removal of the Top Case Unit and Battery Case Unit

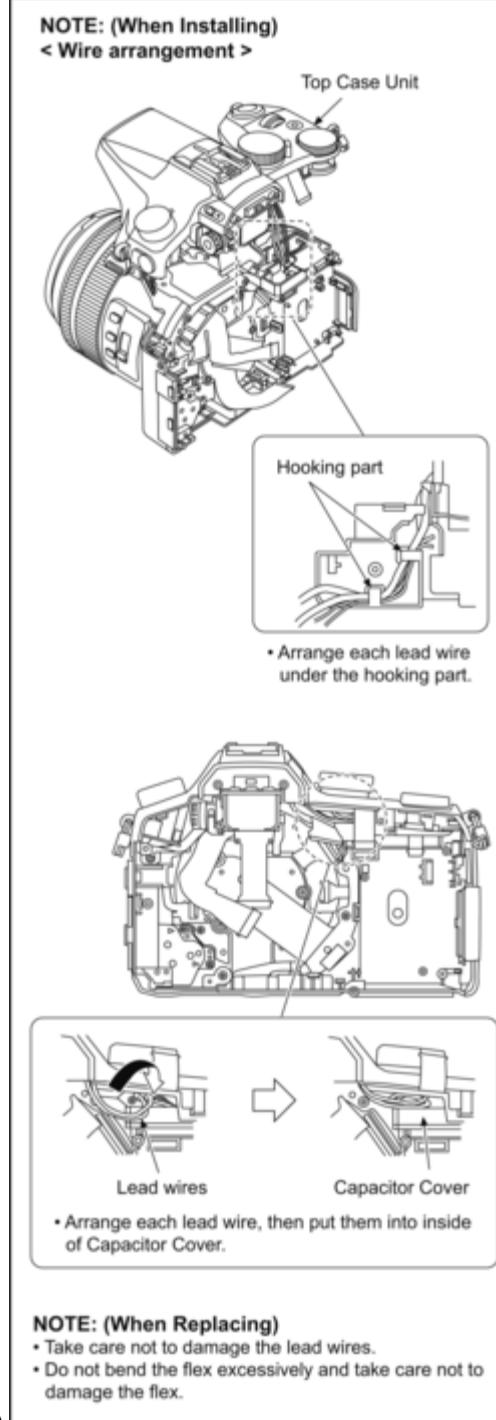

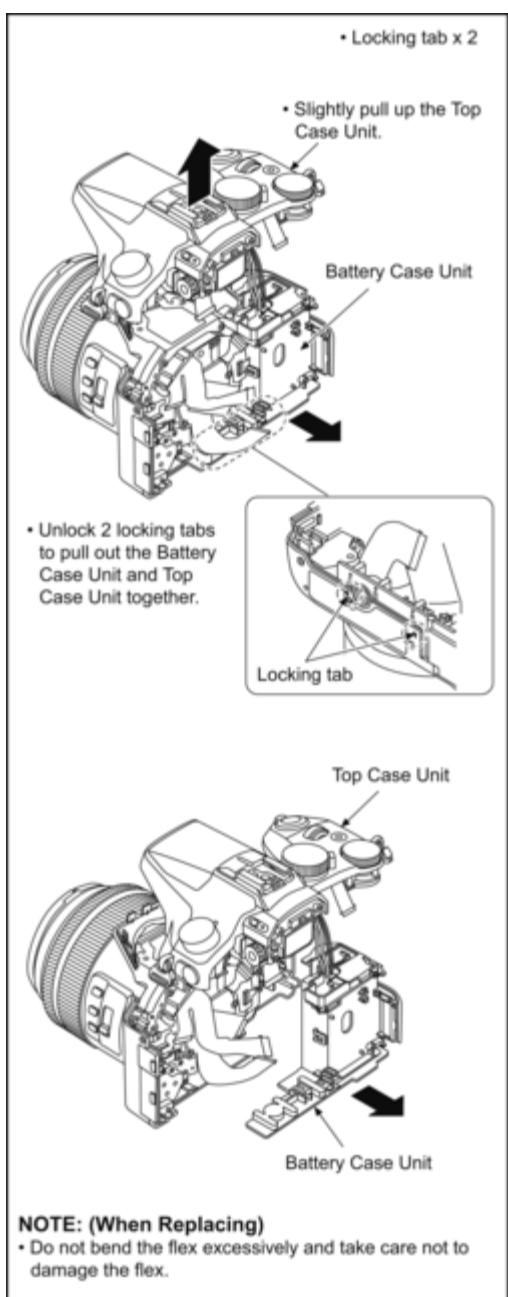

(Fig. D7)

(Fig. D8)

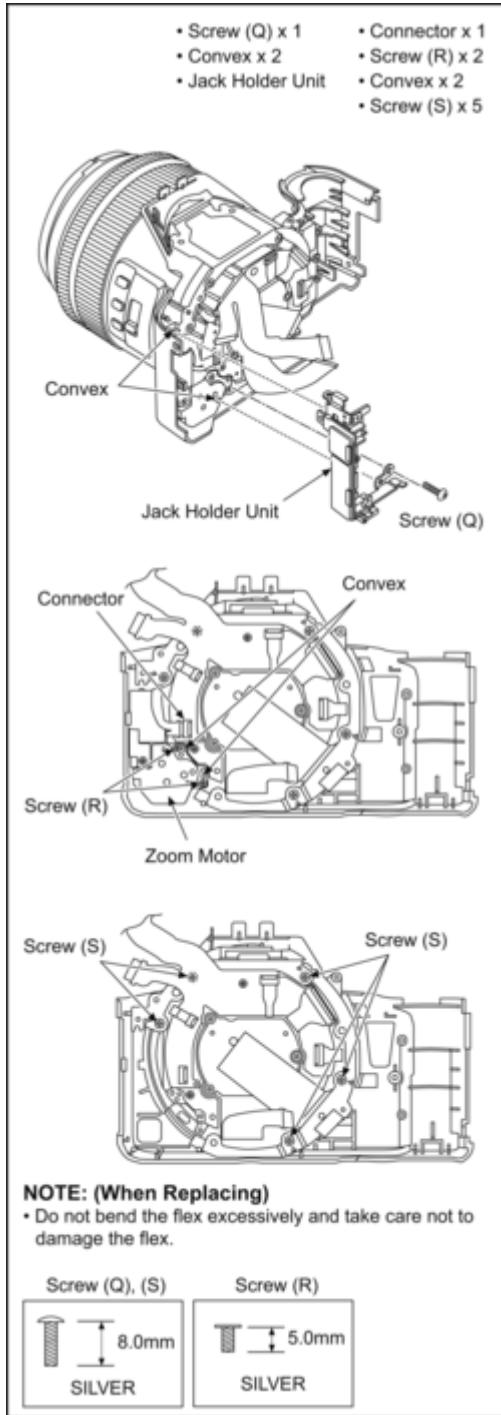

(Fig. D9)

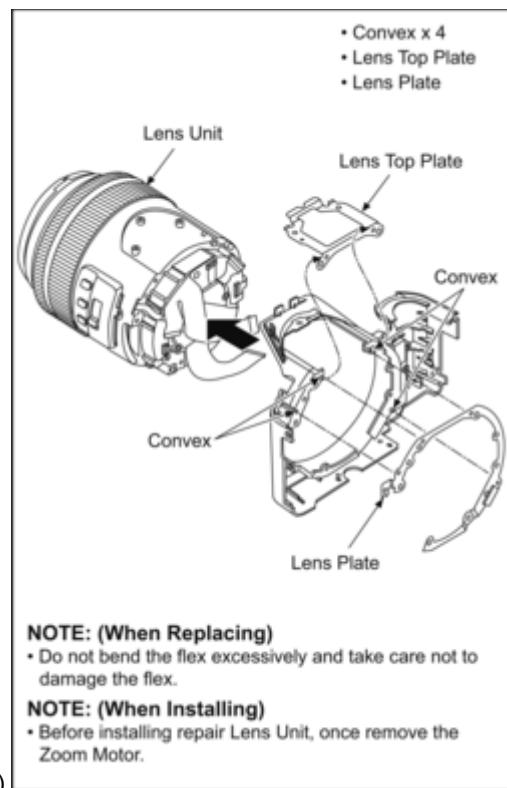

(Fig. D10)

### 9.3.5 Removal of the Zoom Motor and Lens Unit

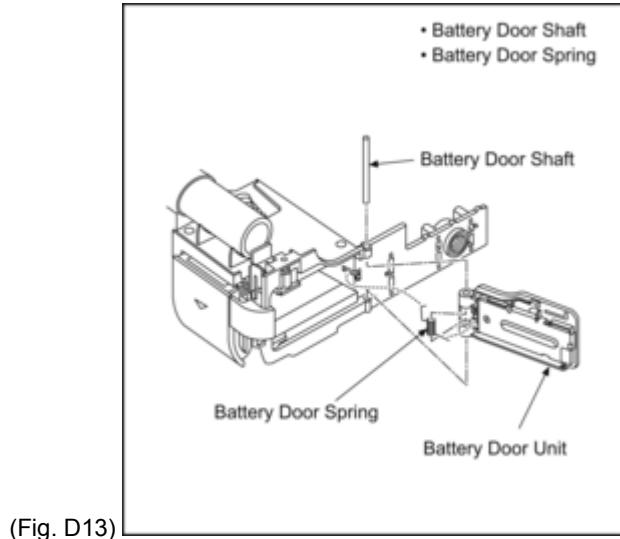

(Fig. D11)

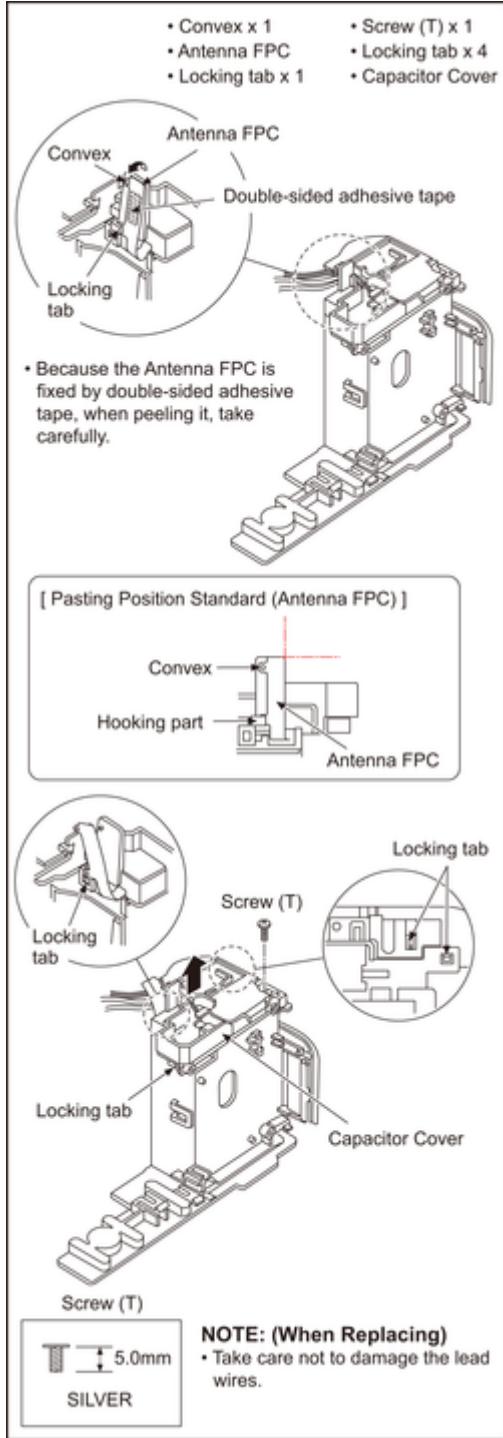

(Fig. D12)

### 9.3.6 Removal of the Battery Door Unit

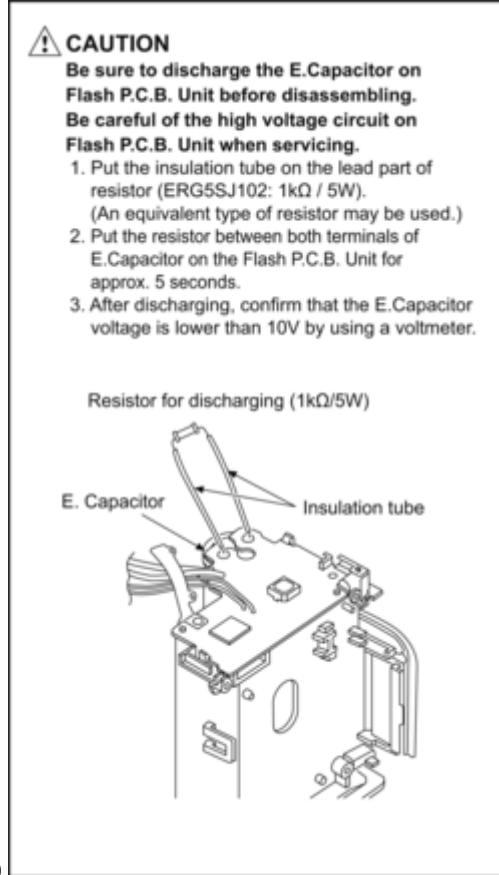

### 9.3.7 Removal of the Flash P.C.B. Unit

(Fig. D14)

(Fig. D15)

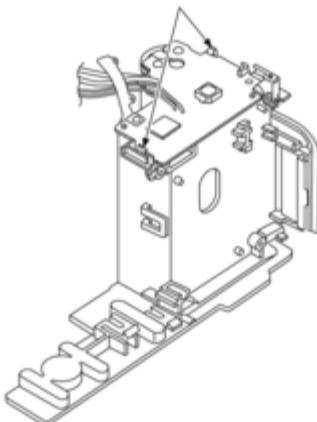

(Fig.)

**IMPORTANT NOTICE:**

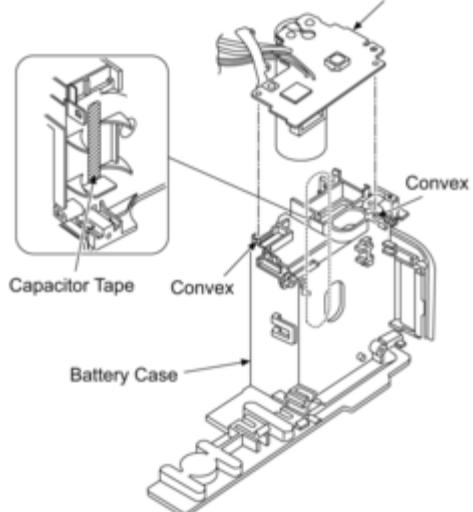

- Take care not apply any bending load to the charging E.Capacitor. It brings about the possibility of Flash P.C.B. Unit and/or component on the Flash P.C.B. Unit.

- Locking tab x 2
- Convex x 2

Locking tab

Flash P.C.B. unit

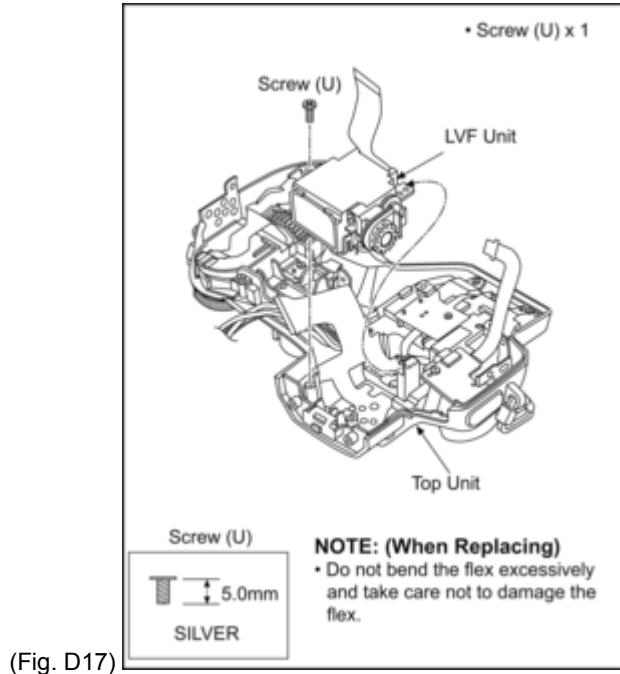

- Because of the E.Capacitor is fixed by Capacitor tape, when removing, take carefully peel.

**NOTE: (When Replacing)**

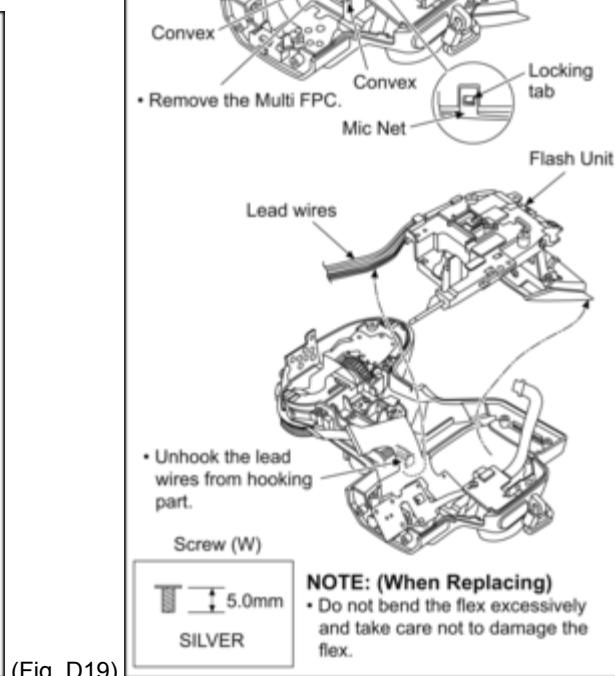

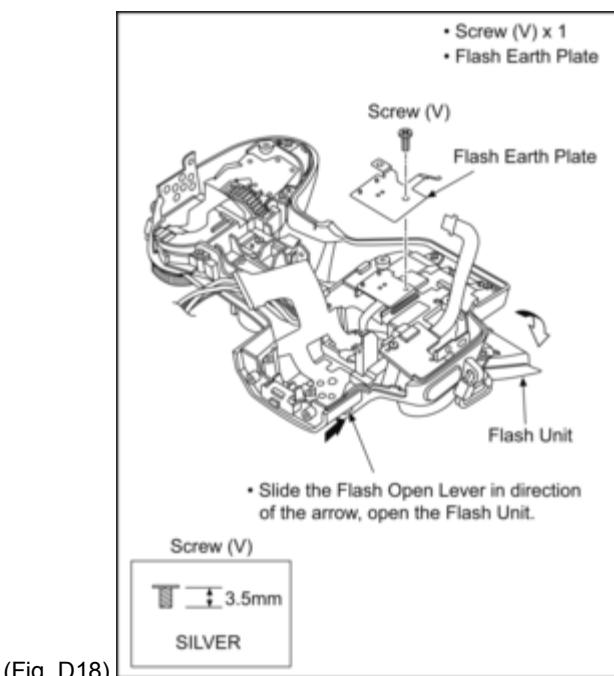

- Take care not to damage the lead wires.

D16)

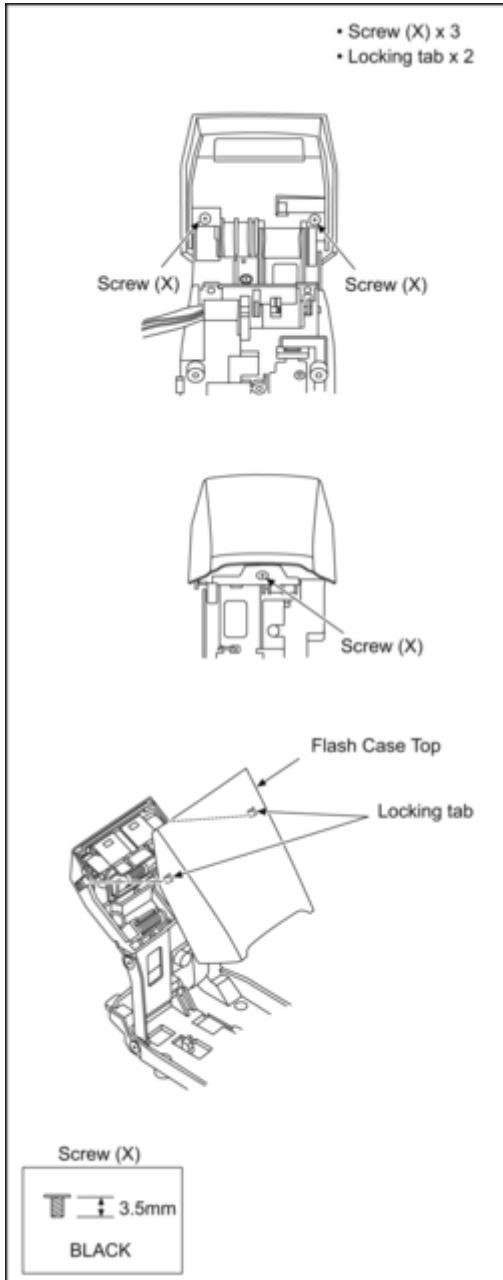

### 9.3.8 Removal of the LVF Unit

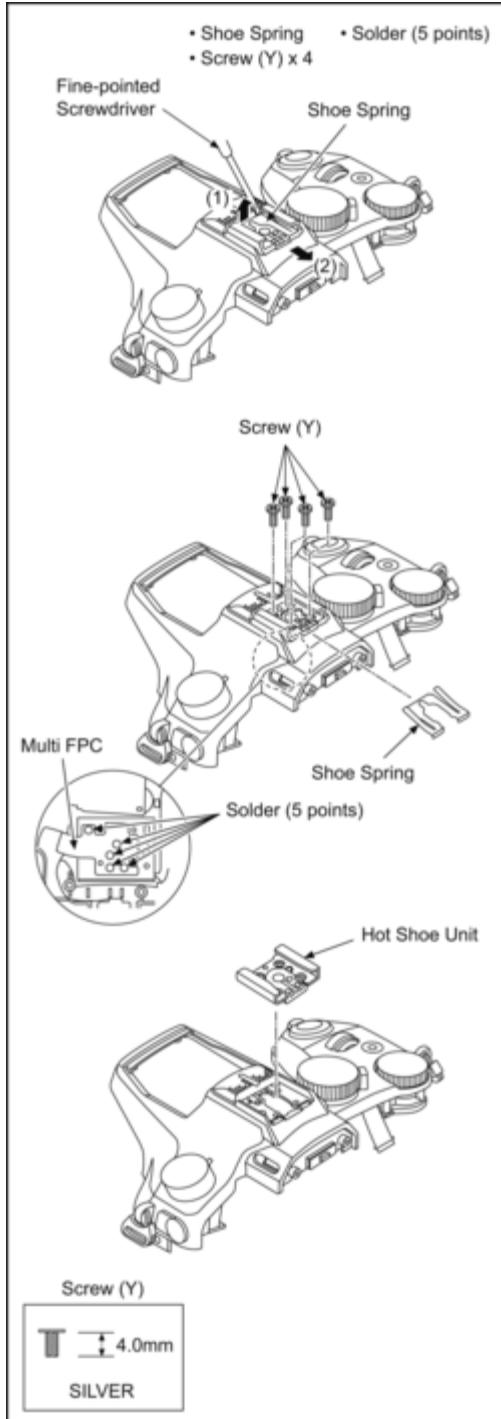

### 9.3.9 Removal of the Flash Unit

### 9.3.10 Removal of the Flash Case Top

### 9.3.11 Removal of the Hot Shoe Unit, Multi FPC and Mic Net

(Fig. D21)

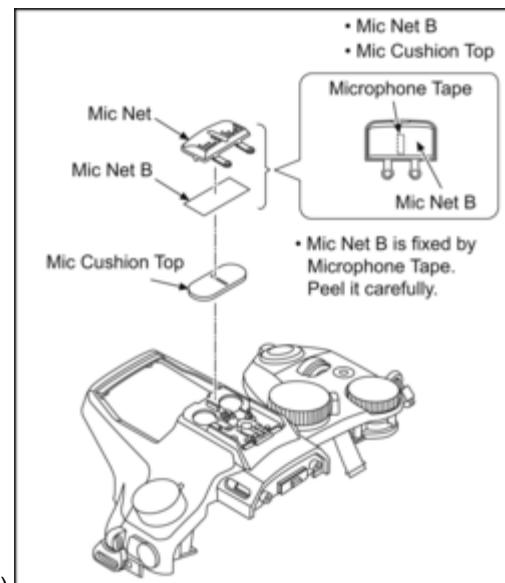

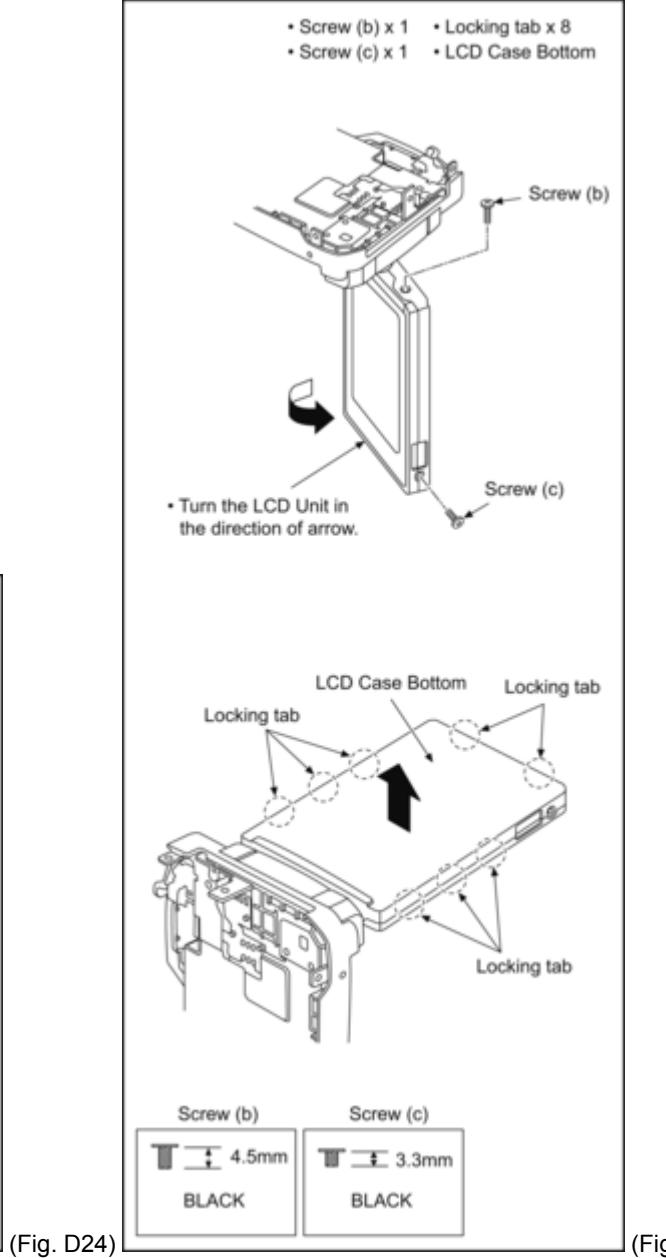

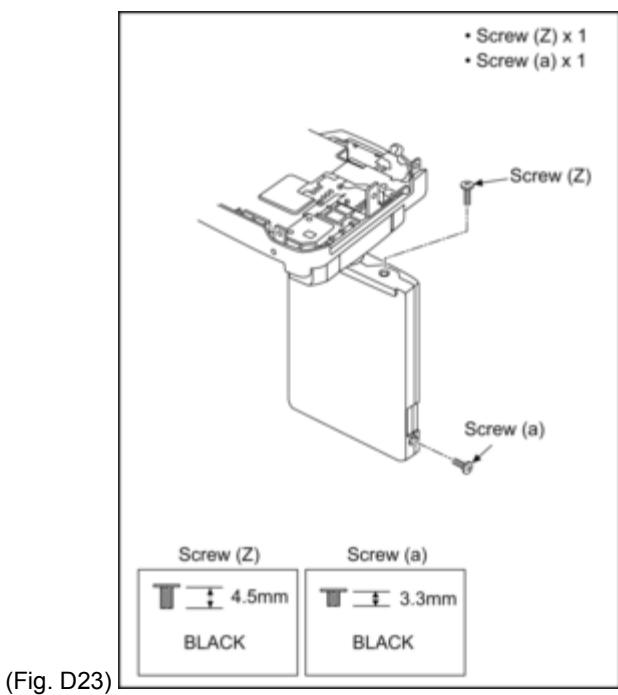

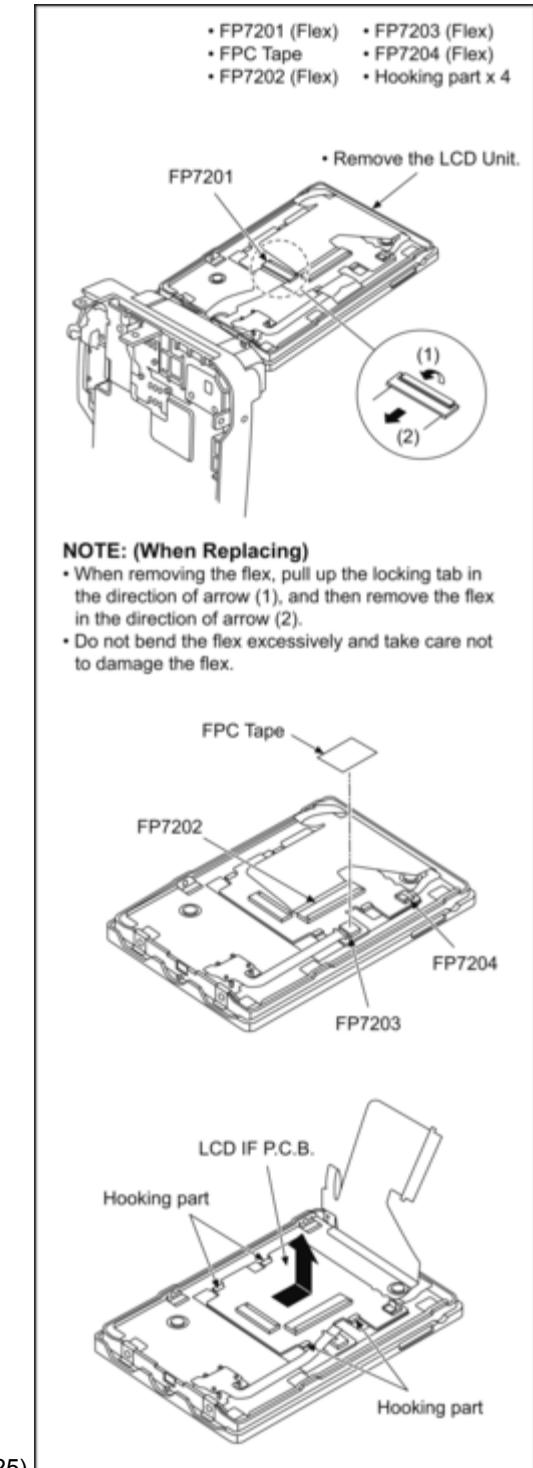

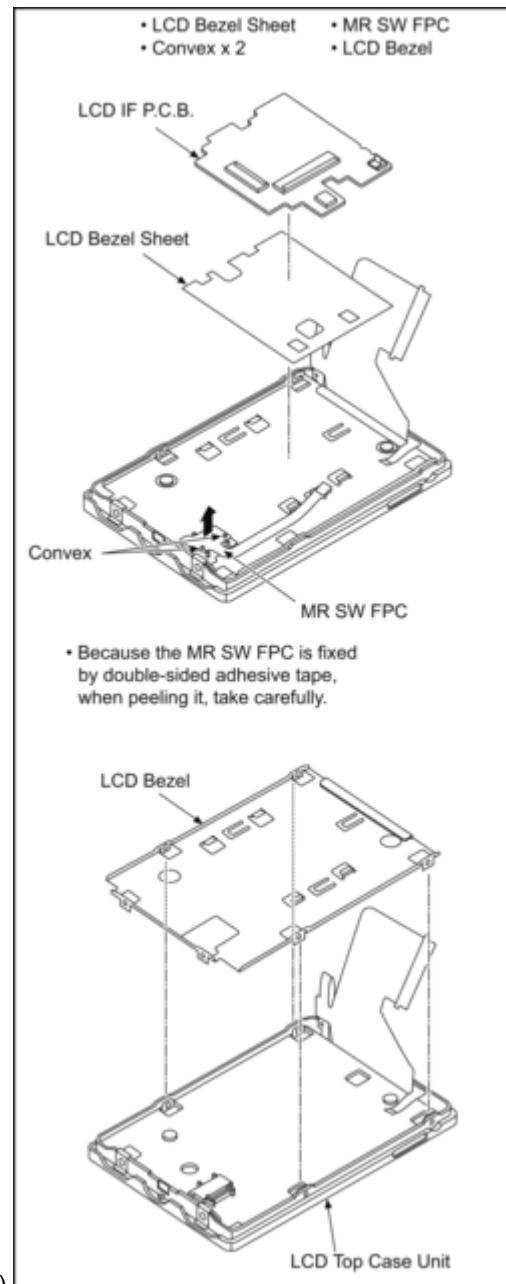

Fig. D22

### 9.3.12 Removal of the LCD IF P.C.B. and LCD Top Case Unit

(Fig. D26)

D25)

**NOTE: (When Installing)**

Make sure to confirm the following points when installing:

- The screw is tightened enough.
- Installing conditions are fine. (No distortion, no abnormal-space.)
- No dust and/or dirt on lens surfaces.
- LCD image is fine. (No dust and/or dirt on it, and no gradient images.)

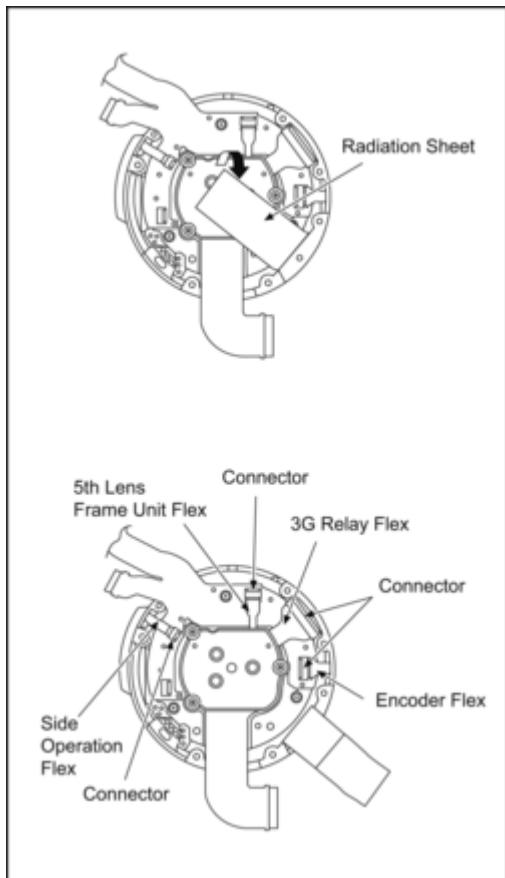

## 9.4 Lens Disassembly Procedure

**Precaution:**

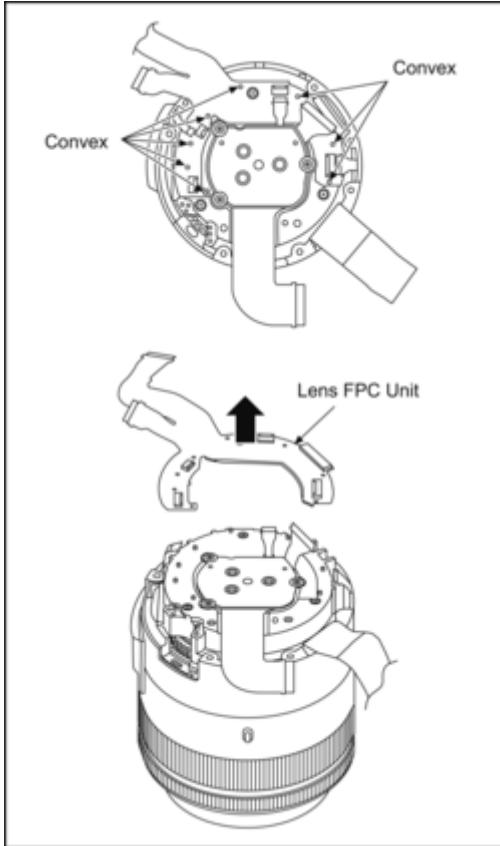

1. Do not remove the MOS Unit when disassembling or reassembling the lens in order to maintain it clean.  
When remove it, refer to item "9.7.".
2. Keep dust or dirt away from the lens.  
To remove dirt or dust from the lens, blow with dry air.
3. Do not touch the lens surface.
4. Use Lens Cleaning Kit (VFK1900BK).
5. Do not bend the flex excessively and take care not to damage the flex.
6. Apply grease to surely the specified position as shown in the figure on item "9.6.".

**9.4.1 Removal of the Lens FPC Unit**

1. Peel the Radiation Sheet
2. Unconnect the 4 connectors each flex.

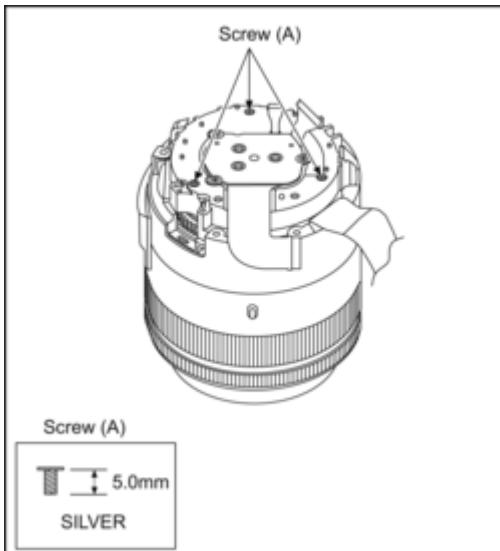

3. Remove 8 covexes.

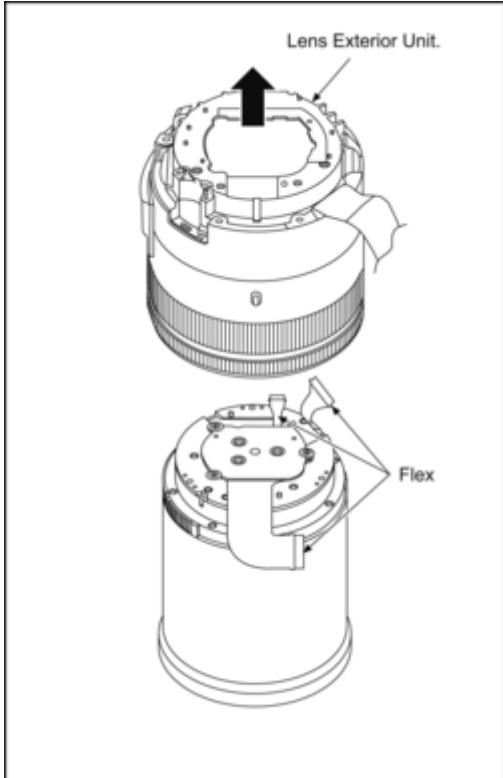

#### 9.4.2 Removal of the Lens Exterior Unit

1. Unscrew the 3 screws (A).

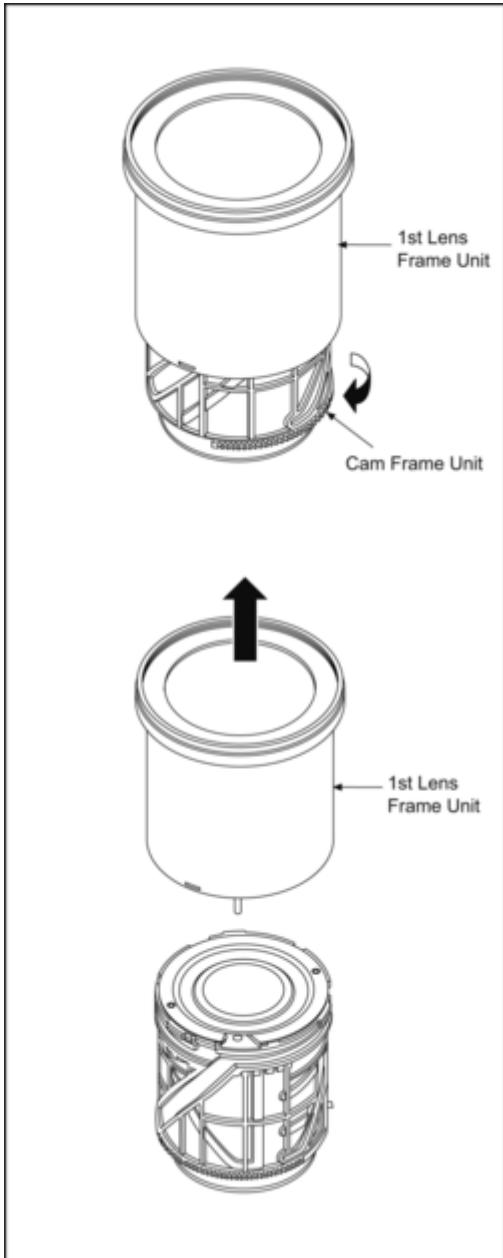

2. Remove the Lens Exterior Unit.

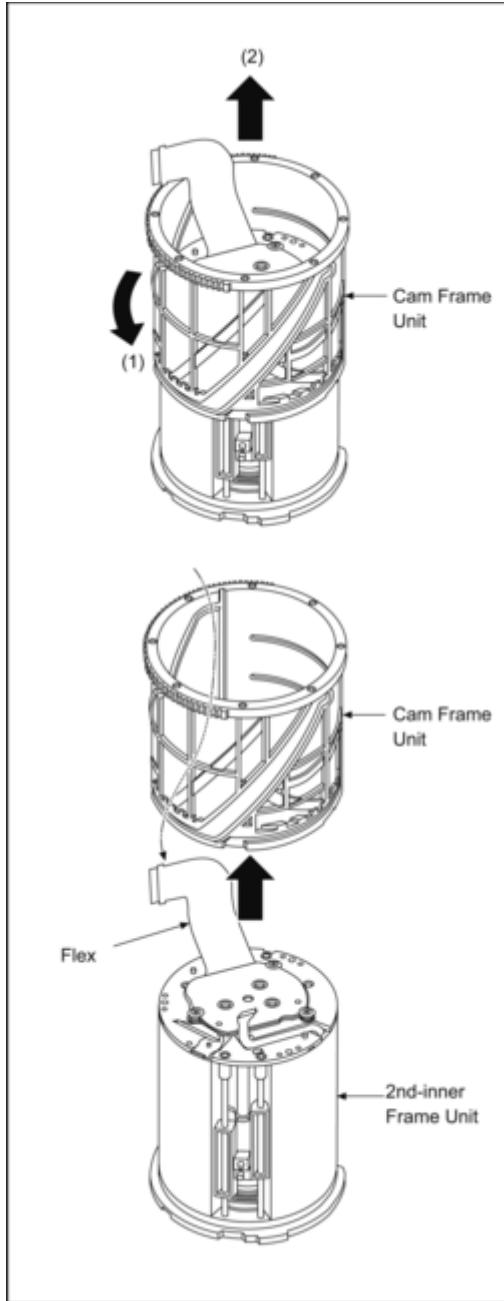

#### 9.4.3 Removal of the 1st Lens Frame Unit

1. Stand up with the lens side of 1st Lens Frame Unit up.
2. Fully rotate the Cam Frame Unit clockwise.

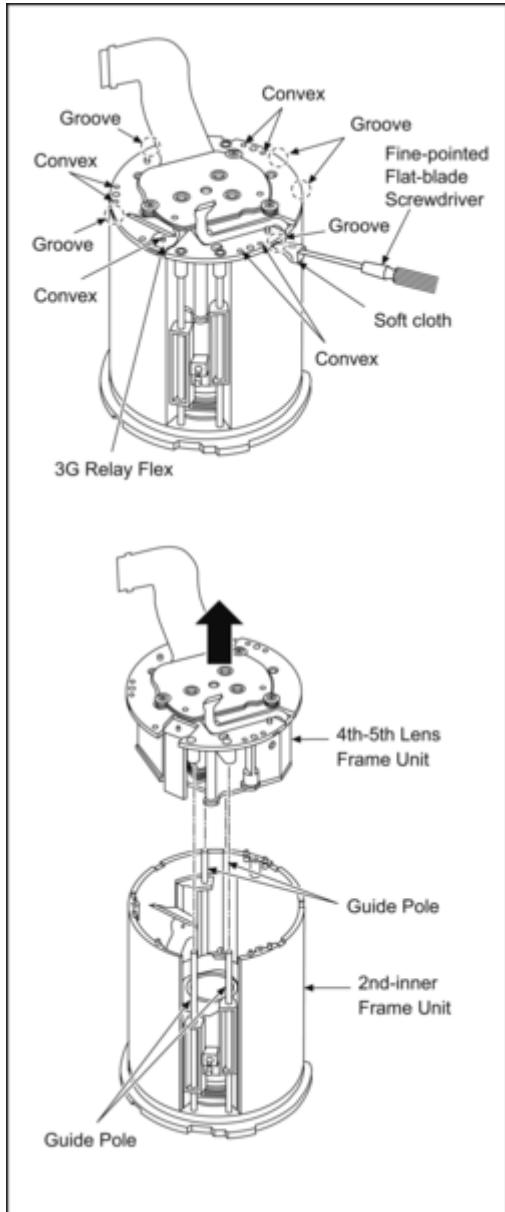

#### 9.4.4 Removal of the Cam Frame Unit

1. Rotate the Cam Frame Unit and remove it upward.

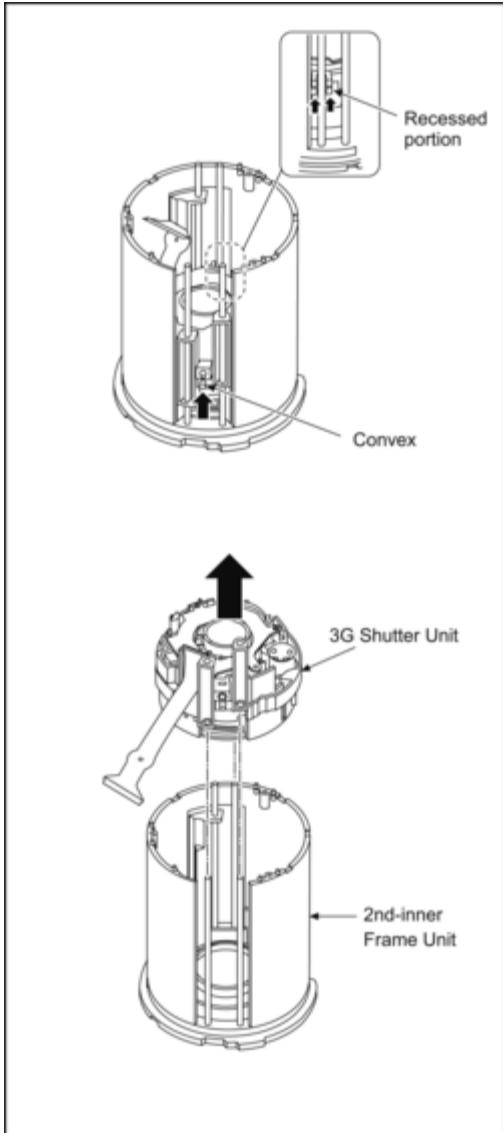

#### 9.4.5 Removal of the 4th-5th Lens Frame Unit

1. Remove the 3G Relay Flex from convex.
2. Insert the thin screwdriver in turn into 5 grooves and lift the 4th-5th Lens Frame Unit little by little.
3. Remove the 4th-5th Lens Frame Unit from 4 guide poles straight up.

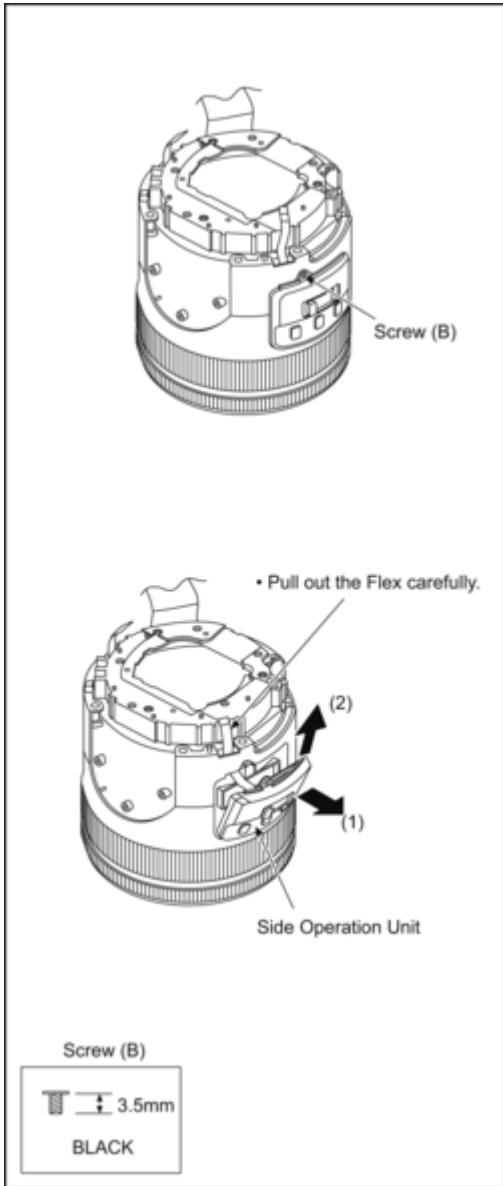

#### 9.4.6 Removal of the 3G Shutter Unit

1. Lift the 3G Shutter Unit convex and recessed portion same time, remove the 3G Shutter Unit.

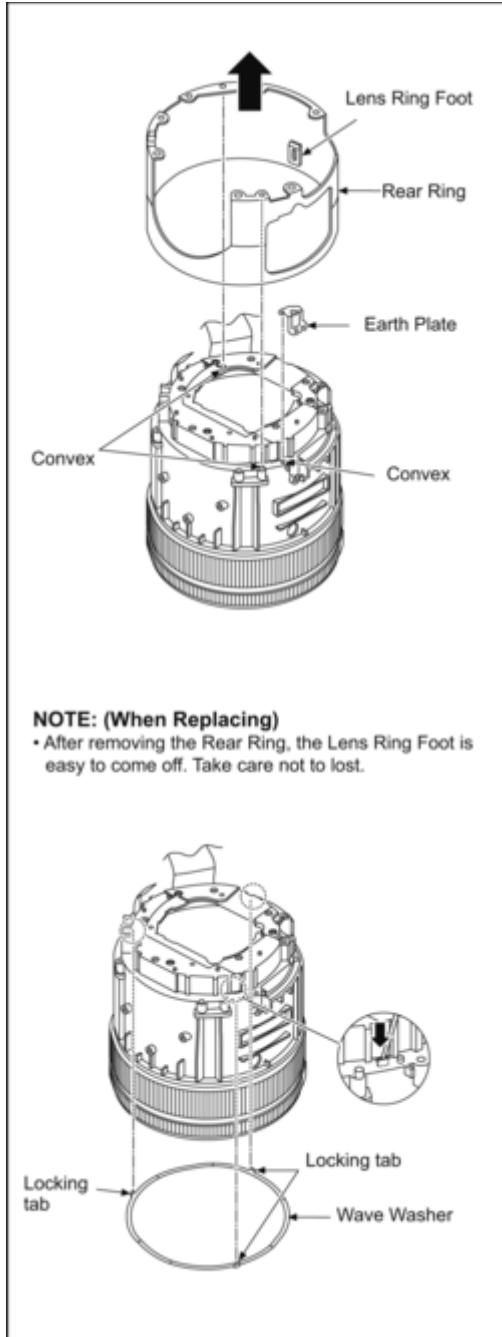

#### 9.4.7 Removal of the Side Operation Unit, Lens Exterior Unit, Rear Ring

1. Unscrew the Screw (B).
2. Remove the Side Operation Unit in the direction of arrow.

3. Remove the Rear Ring and Earth Plate upward.
4. Using flat-blade screwdriver, pressing the 3 locking tabs of wave washer, remove the Wave Washer.

## 9.5 Assembly Procedure for the Lens

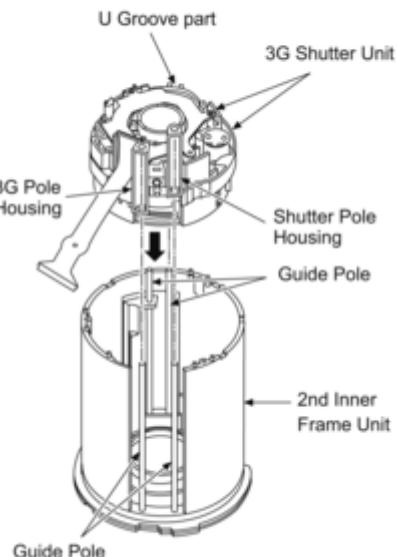

### Precaution:

1. Do not remove the MOS Unit when disassembling or reassembling the lens in order to maintain it clean. When remove it, refer to item "9.7.".
2. Keep dust or dirt away from the lens. To remove dirt or dust from the lens, blow with dry air.
3. Do not touch the lens surface.
4. Use Lens Cleaning Kit (VFK1900BK).
5. Do not bend the flex excessively and take care not to damage the flex.

6. Apply grease to surely the specified position as shown in the figure on item "9.6.".
7. For items that are not in the assembly procedure, follow the reverse procedure of disassembly procedure.

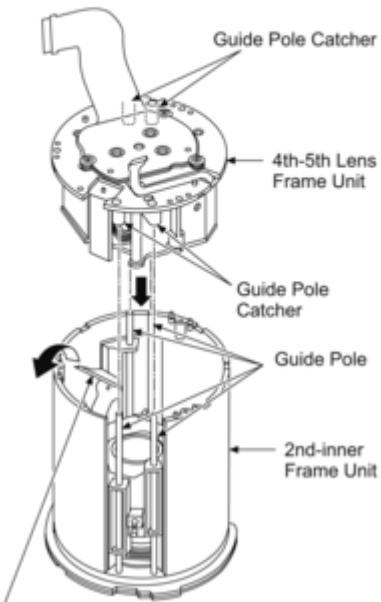

### 9.5.1 Assembly of the 3G Shutter Unit

1. Insert the 3G Shutter Unit into the 2nd-inner Frame Unit. (Insert the Guide Pole into the 3G Pole Housing, Shutter Pole Housing, U Groove part.)

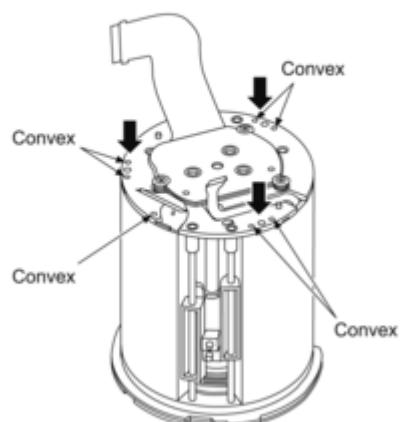

### 9.5.2 Assembly of the 4th-5th Lens Frame Unit

1. Insert the 4th-5th Lens Frame Unit into 2nd-inner Frame Unit. (Insert the Guide Pole into the Guide Pole Catcher of the 4th-5th Lens Frame Unit.)
2. Push the 4th-5th Lens Frame Unit until convexes (7 points) is completely fitted.

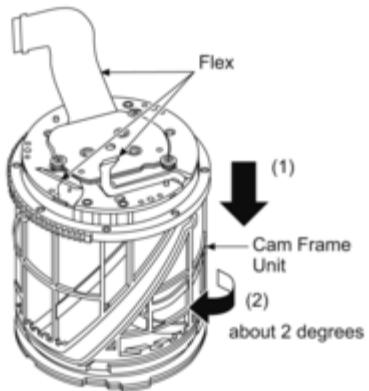

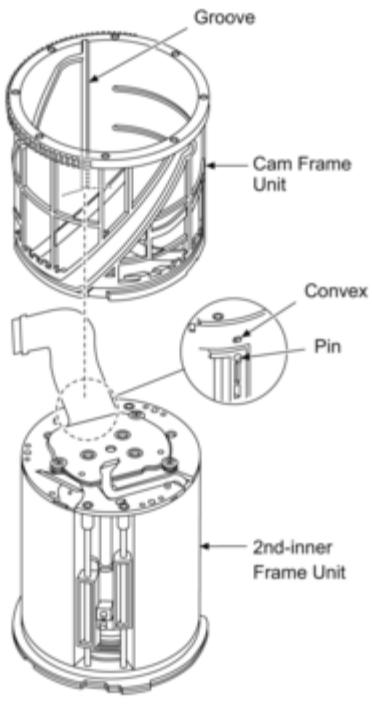

**NOTE: (When Installing)**

- Leave the end of the 3G Relay Flex out to the outer periphery.

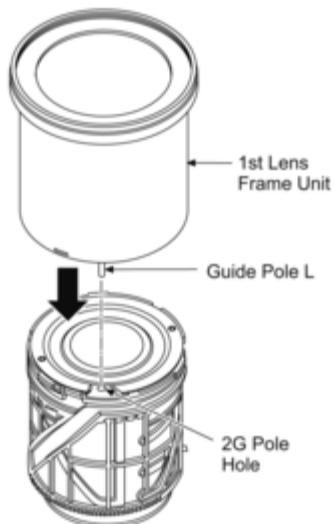

### 9.5.3 Assembly of the Cam Frame Unit

1. Insert the Cam Frame Unit into 2nd-inner Frame Unit.  
(Align the groove of Cam Frame Unit and convex of 2nd-inner Frame Unit, then Insert the Cam Frame Unit.)
2. When inserting, take care not to pinch the 3 Flexes.
3. After insertion completed, rotate the Cam Frame Unit about 2 degrees in the direction of arrow.

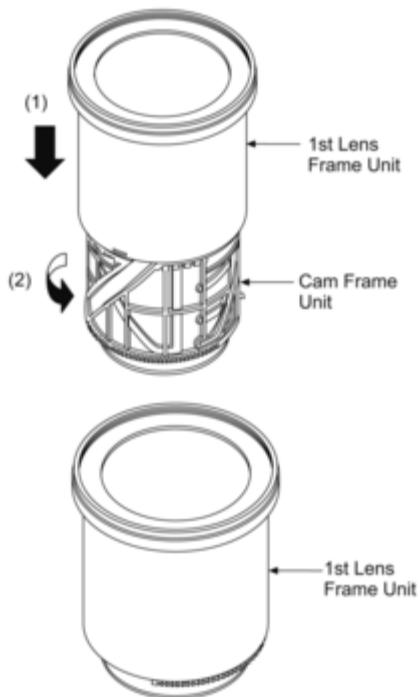

#### 9.5.4 Assembly of the 1st Lens Frame Unit

1. Insert the 1st Lens Frame Unit into Cam Frame Unit.  
(Insertion is performed the Guide Pole L into the 2G Pole Hole.)

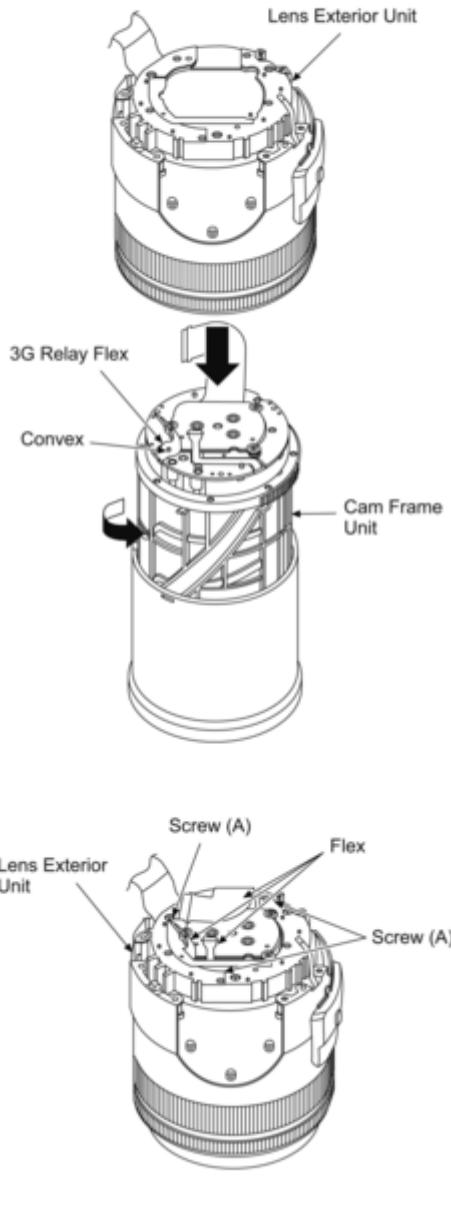

2. After inserting to the state shown in the figure below, rotate the Cam Frame Unit in the direction of arrow (2) to the end and put it in the collapsed state.

### 9.5.5 Assembly of the Lens Exterior Unit

1. Press-fit positioning hole of the 3G Relay Flex into convex.
2. Rotate the Cam Frame Unit about 80 degrees in the direction of arrow to put it in the WIDO state.
3. Insert the Lens Exterior Unit into the Cam Frame Unit. (Be careful not to pinch the flex.)
4. Tighten 3 screws (A).

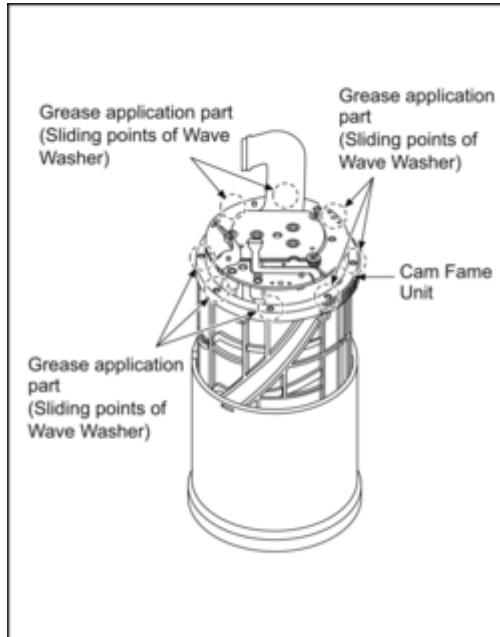

## 9.6 The Application of Grease Method

The grease application parts of lens unit are as follows.

Apply grease additionally in the specified position if necessary.

When the grease is applied, use a toothpick and apply thinly.

- Sliding points of Wave Washer
  - Grease: RFKZ0472
  - Amount of application:  $1.0 \pm 0.1$  mg (8 points)

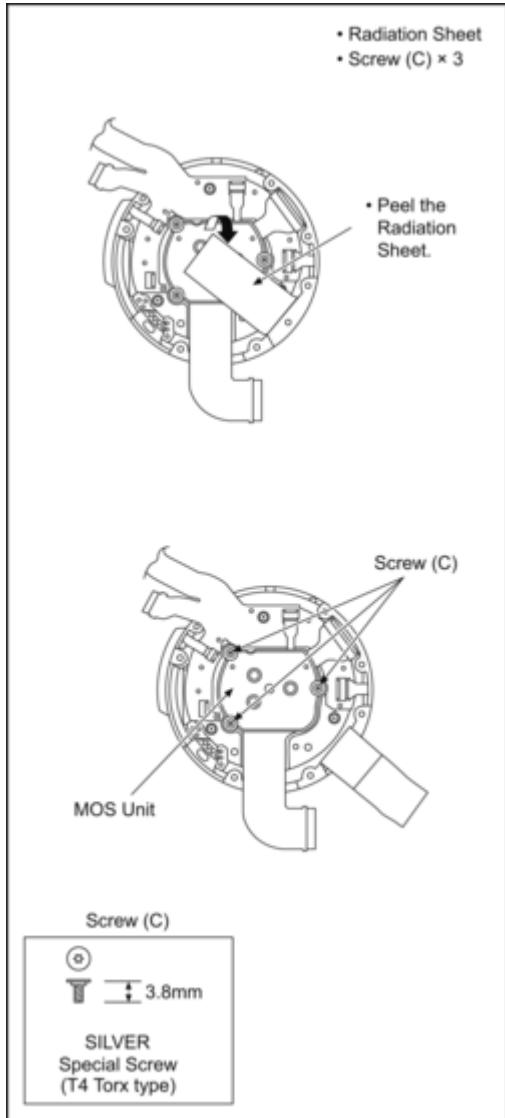

## 9.7 Removal of the MOS Unit

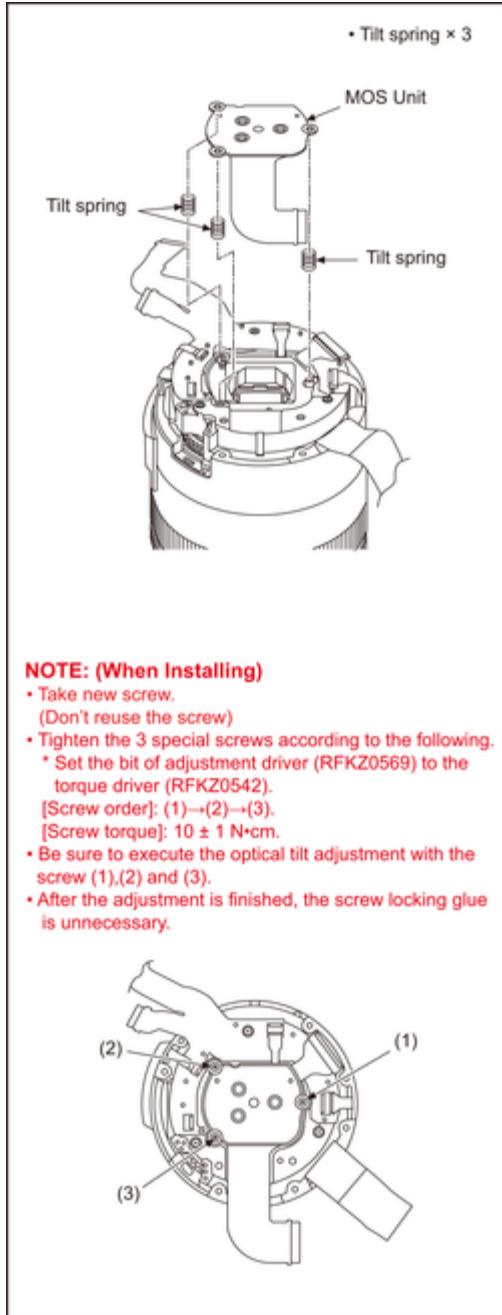

**\* If the MOS Unit removed once (the screw (C) is loosened even a little), the optical tilt adjustment is required.**

**When loosen the screw (C), necessary the optical tilt adjustment at the end of assembling.  
(Refer to item "10.3.2.")**

- To prevent the MOS Unit from catching the dust and dirt, do not remove the MOS Unit except for replacing.
1. Peel the Radiation Sheet.
  2. Unscrew the 3 screws (C).
  3. Remove the MOS Unit.

4. Remove the 3 Tilt Springs.

# 10 Measurements and Adjustments

## 10.1 Introduction

When servicing this unit, make sure to perform the adjustments necessary based on the part(s) replaced. Before disassembling the unit, it is recommended to back up the camera data stored in Flash-ROM as a data file.

**NOTE: (When replacing the Lens unit and MOS unit)**

- When the MOS unit is unavoidably removed for Lens unit and MOS unit replaced, an optical tilt adjustment is necessary after parts are exchanged.
- The adjustment software (DSC\_Tilt) is necessary to execute an optical tilt adjustment.
- The adjustment software "DSC\_Tilt" is available at "TSN Website".

**NOTE: (When replacing the Main P.C.B.)**

- Number of necessary adjustment items decreases by copying the backup data to new Main P.C.B. when adjustment data in old Main P.C.B. can be read by ROM\_BACKUP "DSC→SD" in "10.2.2. Flash-Rom Data Backup".
- For more details, please refer an item "MAIN P.C.B. (When written the Backup data)" in the table of "10.3.2. Adjustment Specifications".

**IMPORTANT NOTICE (After replacing the Main P.C.B.)**

After replacing the Main P.C.B., it is necessary to achieve adjustment.

## 10.2 Before Disassembling the unit

### 10.2.1 Initial Setting Release

The cameras specification are initially set in accordance with model suffix (such as EB/EG/GK and so on.).

Unless the initial setting is not released, an automatic alignment software in the camera is not able to be executed when the alignment is carried out.

**Note:**

The initial setting should be again done after completing the alignment. Otherwise, the camera may not work properly.

Therefore as a warning, the camera display a warning symbol "!" on the LCD monitor every time the camera is turned off.

Refer to the procedure described in "3.5.2. Initial Settings" for details.

**[ How to Release the camera initial setting ]**

**Preparation:**

- Attach the fully charged Battery, and insert the memory card.
- Remove the lens cap.

**Step 1. The temporary cancellation of "Initial Settings":**

Set the mode dial to "[ P ] (Program AE mode)", and drive mode dial to "[ Single ]".

While keep pressing [ AF/AE LOCK ] button and [ DISP. ] button simultaneously, turn the power on.

**Step 2. Cancellation of "Initial Settings":**

Press the [ Playback ] button in order to enter the [ Playback ] mode.

Press [ AF/AE LOCK ] button and "[ UP ] of Cursor buttons" simultaneously, then turn the power off.

The LCD displays the "!" mark before the unit powers down.

### 10.2.2 Flash-ROM Data Backup

Number of necessary adjustment items decreases by copying the backup data to new Main P.C.B. when adjustment data in old Main P.C.B. is usually read by ROM\_BACKUP "DSC→SD". It is recommended to backup the Flash-ROM data as the way of return when trouble occurs before disassembling the unit depending on each case.

**[ ROM\_BACKUP (Method of Non-PC backup) ]**

1. Insert the memory card into the unit.
2. Set the camera to "Temporary cancellation of the initial settings".
3. Select the "SETUP" menu.  
From the "SETUP" menu, select "ROM\_BACKUP".

**NOTE:**

This item is not listed on the customer's "SETUP" menu.

4. When this "ROM\_BACKUP" item is selected, the following submenus are displayed.

Fig.2-1

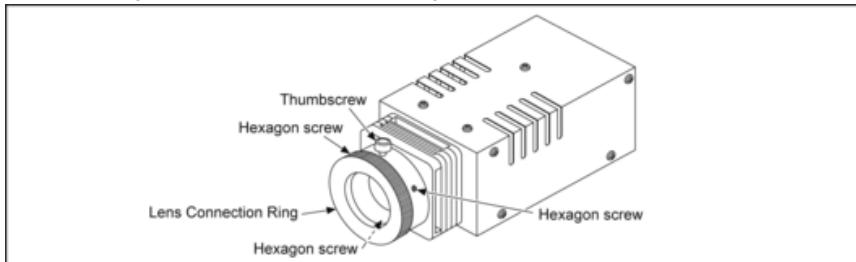

Item	Function	Details
DSC → SD	Save all the DSC's Flash-ROM data to Memory Card	<ul style="list-style-type: none"> <li>DSC's Flash-ROM data is saved to the Memory Card as a data file. (DATA BACKUP)</li> <li>File location: ROOT DIRECTORY in Memory Card.</li> <li>File Name:           <ul style="list-style-type: none"> <li>1) User Setup Information data:&lt;Model No.&gt;U.TXT [Depending on the model, more than one file may be generated (e.g. &lt;Model No.&gt;U.TXT and &lt;Model No.&gt;U3.TXT).]</li> <li>2) Electrical Adjustment data:&lt;Model No.&gt;F.TXT [Depending on the model, more than one file may be generated (e.g. &lt;Model No.&gt;F.TXT and &lt;Model No.&gt;F3.TXT).]</li> </ul> </li> <li>If the concerned file already exists, "OVERWRITE?" message is displayed.</li> </ul>
SDALL → DSC (ID CHECK)	Write the all data to DSC's Flash-ROM from Memory Card	<ul style="list-style-type: none"> <li>The backup data stored in the Memory Card is transferred to DSC unit.</li> <li>ID CHECK: When the model ID is different, data is not transferred.</li> <li>FORCE: Even if the model ID is different, data is transferred.</li> </ul>
SDALL → DSC (FORCE)	Write the all data to DSC's Flash-ROM from Memory Card	<ul style="list-style-type: none"> <li>If the Main P.C.B. is replaced, select "SDALL→DSC(FORCE)".</li> </ul>
SDUSER → DSC (FORCE)	Only "User setup information" is written from the saved file in the Memory Card to DSC's Flash-ROM	<ul style="list-style-type: none"> <li>Only the user's "setup" setting condition is transferred to DSC unit.</li> <li>FORCE: Even if the model ID is different, the data is not transferred.</li> </ul>
! → LUMIX	Shipping set without initializing "User setup information"	<ul style="list-style-type: none"> <li>Initial setting is executed without initializing the user's set up setting condition.</li> <li>The initial setting must be performed while the Self-timer LED is blinking.</li> <li>The picture data stored in the built-in memory of the DSC is not erased, with this operation.</li> </ul>
ADJFLAG → ALL F	Set all adjustment flags completion	<ul style="list-style-type: none"> <li>Status of the all adjustment flags are changed to "F" (completion).</li> </ul>
WBADJ → STEPMODE	ISO: Adjustment WBL, WBM: Setting	<ul style="list-style-type: none"> <li>ISO: Sensitivity adjustment.</li> <li>WBL: Setting up the white in low color temperature.</li> <li>WBM: Setting up the white in high color temperature.</li> </ul>
STEPMODE → WBADJ	Cancel "STEPMODE"	<ul style="list-style-type: none"> <li>Cancel the "STEPMODE" mode.</li> </ul>

### 10.2.3 About Light Box

#### When using VFK1164TDVBL Light Box

If using VFK1164TDVBL Light Box, remove the lens connection ring by loosing thumbscrew and three hexagon screws.

\* RFKZ0523 Light Box has no lens connection ring.

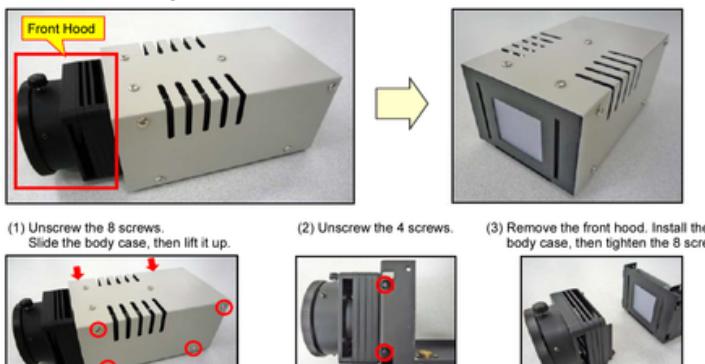

#### How to remove the Front Hood

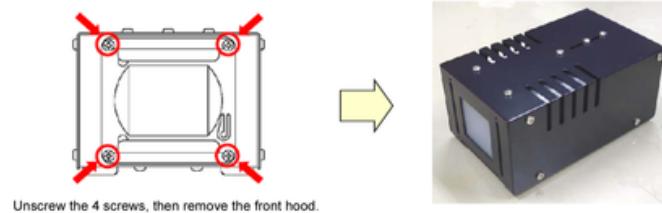

In order to utilize maximum of the diffusing surface of Light Box, some adjustment items need the distance between diffusing surface of Light Box and camera body becomes several cent-meters.

Before the adjustments, remove the front hood of Light Box following steps below.

#### [ For VFK1164TDVBL Light Box ]

#### [ For RFKZ0523 Light Box ]

## 10.3 Details of Electrical Adjustment

### 10.3.1 How to execute the Electrical Adjustment

It is not necessary to connect the camera to a PC to perform adjustments.

"Flag reset operation" and "Initial setting operation" are required when carrying out the alignment, follow the procedure below.

#### 10.3.1.1 Startup Electrical Adjustment mode

1. Release the initial settings.
2. Insert a recordable memory card.  
(Without a memory card, the automatic adjustment can not be executed.)
3. Set the mode dial to "[ P ] (Program AE mode)".
4. Procedure to set the camera into adjustment mode:  
Turn the Power on pressing [ Q.MENU/Fn5 ] button, and [ (Delete/Cancel)/Fn6 ] button simultaneously.  
LCD monitor displays "SERVICE MODE". (Refer to Fig. 3-1)

Fig.3-1

#### 10.3.1.2 Status Adjustment Flag Setting

Reset (Not yet adjusted) the status flag condition.

1. Press the [ DISP. ] button, the LCD monitor displays the Flag status screen. (Refer to Fig.3-2)
2. Select item by pressing the Cursor buttons. (Gray cursor is moved accordingly.)
3. Press the [ (Delete/Cancel)/Fn6 ] button.

##### NOTE:

The selected item's flag has been changed from "F (green)" to "0 (yellow)".

\*Flag conditions:

F (green)

means that the alignment has been completed and the status flag condition is set. In this case, the flag condition should be reset, if you try to carry out the automatic alignment.

0 (yellow)

means that the alignment has been not "completed" and the status flag condition is "reset". In this case, automatic alignment is available.

DIAL	FIRS	FSHD	FWKI	F		AA3	FPWK	F---	---
KEY	FNDC	FWBL	FBKI	F		OLN	FRS2c	F---	---
TPI	FSHTc	FWBM	FDST	F		RSt	FBK2	F---	---
EST	FIAD	FEYE	FCOL	F		RSnw	F---	---	---
EMC	FISO	FSTB	FMOV	F		WNZ	F---	---	---
ZHP	FSAT	FLED	FFOC	F		LGC	F---	---	---
PZM	FBF	FCLK	FAA2	F		WiFi	F---	---	---
OIS	FBFN	FSKI	FOU4	F		ZOM	F---	---	RESET

Fig.3-2

- In case of setting the status flag into set condition again without completion of the alignment, the status flag should be UNDO by using ROM BACKUP function.

#### 10.3.1.3 Execute Adjustment (In case of "OIS Adjustment")

1. Perform step "10.3.1.1." to "10.3.1.2.", to reset the OIS flag status "F" (Set) to "0" (Reset)
2. Press "[ DISP. ] button" after Flag reset.  
OIS Adjustment screen is displayed on the LCD panel. (Refer to Fig.3-3)
3. Press the [ Shutter ] button.  
The adjustment will start automatically.
4. When the adjustment is completed successfully, adjustment report menu appears with Green OK on the LCD monitor. (Refer to Fig.3-4)

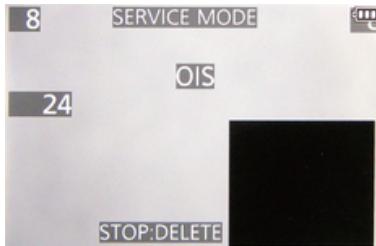

Fig.3-3

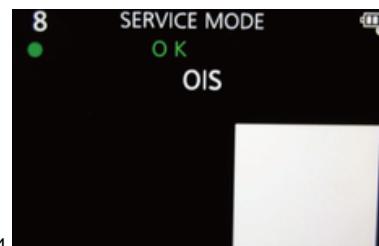

Fig.3-4

#### 10.3.1.4 Attention point during Adjustment

1. Step "10.3.1.3." procedure shows OIS adjustment as an example. To perform the adjustment, refer to the "10.3.2. Adjustment Specifications" table which shows key point for each adjustment.
2. Do not move the light box, the camera or the chart while adjusting. If one of these is moved accidentally, start the adjustment again.
3. Do not press any buttons/keys until the default menu (Refer to Fig.3-5) is displayed on the LCD monitor. Otherwise, adjustment data may not be stored properly.
4. If the adjustment is interrupted accidentally, the alignment data may not be properly saved in the Flash-ROM.

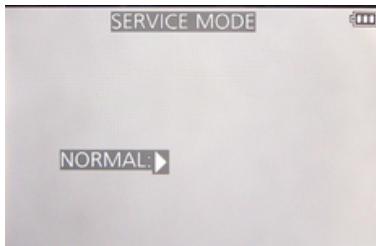

Fig.3-5

#### 10.3.1.5 Finalizing the Adjustment

1. Several adjustment flags can be reset ("F" into "0") at the same time. In this case, when the adjustment has been completed, the screen will change showing the adjustment for the next item until all reset items are completed.  
Also, when the [ Shutter ] button is pressed, the screen jump to the next adjustment item.
2. To cancel the adjustment mode while in the process of performing the adjustment, follow this procedures.
3. Operate the following, when escaping the Electrical Adjustment mode on the way.
  - (1) Press "[ DISP. ] button".
  - (2) Press "[ RIGHT ] of Cursor buttons".

**NOTE:**

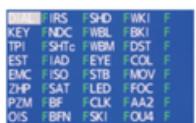

- If adjustment is cancelled with above procedure, adjustment is not completed. Make sure to adjust it later.

#### 10.3.2 Adjustment Specifications

The following matrix table shows the relation between the replaced part and the Necessary Adjustment.

When a part is replaced, make sure to perform the necessary adjustment(s) in the order indicated.

The table below shows all the information necessary to perform each adjustment.

Adjustment Item	FLAG	Purpose	Replacing Parts								JIG/TOOLS	SETUP	How to Operate	
			MAIN P.C.B. /VENUS ENGINE	MAIN P.C.B. (When written the Backup data)	Lens part (Excluding Image Sensor)	Image Sensor	Microphone	Flash Part	Rear Case Unit	Electronic Level (IC6201)				
Optical Tilt	-	Adjustment of MOS Unit installation angle to the Lens	-	-	○	○	-	-	-	-	NOTE: It is necessary to use the "DSC_Tilt" software to allow the "Optical tilt adjustment". The Adjustment software "DSC_Tilt" is available at "TSN Website". • Optical Tilt Adjustment Driver RFKZ0569 : T4  • Optical Tilt Adjustment Chart RFKZ0570  • Camera Stand RFKZ0333J  • Torque Driver RFKZ0542 * Tightening torques : 10N·cm ± 1 N·cm  * All adjusting screws need adjustment. (Fixed screw need loosening after tightening.) * Back angle (Default): 360 degrees * The screw locking glue is unnecessary, after adjustment.			
Zoom Home Position	ZHP	Zoom Home Position Adjustment	○	-	○	○	-	-	-	-	NONE	NONE	1) Change the flag into the "0", and then proceed to the adjustment mode. 2) Press the shutter button fully. (When a result is OK, it is the completion of an inspection.)	
Venus Zoom*4	PZM	Venus Zoom Inspection	○	○	-	-	-	-	-	-	NONE	NONE	1) Change the flag into the "0", and then proceed to the adjustment mode. 2) Press the shutter button fully. (When a result is OK, it is the completion of an inspection.)	
OIS sensor	OIS	OIS sensor output level adjustment	○	-	○	○	-	-	-	-	NONE	NONE	1) Change the flag into the "0", and then proceed to the adjustment mode. 2) Press the shutter button fully. (When a result is OK, it is the completion of an inspection.)	
Iris	IRS	Iris adjustment	○	-	-	○	-	-	-	-	• Light Box RFKZ0523		1) Change the flag into the "0", and then proceed to the adjustment mode. 2) Set the camera in front of light box so that the distance between diffusing surface of light box and lens tube top becomes 0.0 cm (closest). (See "About adjust distance in adjustment procedures" for detail.)	
ND Filter	NDC	ND Filter Inspection	○	-	○	○	-	-	-	-				
Shutter	SHTc	Shutter speed adjustment	○	-	○	○	-	-	-	-

Not "Printing according to paper size". • Confirm that the length of the black belt long side is <b>83 mm</b> (82.994 mm). 2) Put the OLN chart on the wall. 3) Attach the camera to tripod. Set the camera in front of the chart so that the distance between chart and lens tube top becomes <b>1.9m</b>. • It is distance between lens tube top and the chart. See "About adjust distance in adjustment procedures" for detail. 4) Zoom up to Tele-End, and fine adjust the camera angle so that the chart becomes to display center of the LCD monitor.</p>	<p>1) Change the flag into the "0", and then proceed to the adjustment mode. 2) Press the shutter button fully, and the camera is zooming up automatically. • At this time, confirm that the center mark of the chart matches the center of the angle of view adjustment guide frame (white frame) displayed on the LCD.</p> <p>(When a result is OK, it is the completion of an inspection.)</p>
About adjust distance in adjustment procedures	 <p>Light Box RFKZ0523</p> <p>Collimator RFKZ0422</p> <p>Adjust distance</p> <p>DSC Body</p>													
Wi-Fi check	WiFi	Do not use "WiFi" adjustment flag for servicing. This adjustment is for factory procedure. (For confirmation of Wi-Fi function, use the reception level of Wi-Fi access point as usual.)												

- \* 1: This adjustment must be performed not only replacing the MOS Unit, but also simply removing the MOS Unit.
- \* 2: The pixel that always lights while shaded is called a white wound.
- \* 3: The pixel that does not light while complete exposed is called a black wound.
- \* 4: If the adjusted data is backed up from the main board before replacement or repair, write the data to the new main board. If parts other than the main board are not replaced, adjustment is not necessary for items other than "Venus Zoom(PZM) /Backfocus / GYRO(BF) /Flash(STB)".

\* This unit does not have the LCD adjustment of the camera (LCD flicker adjustment etc.).

## 10.4 After Adjustment

### 10.4.1 Initial Setting

Since the initial setting has been released to execute the built-in adjustment software, it should be set up again before shipping the camera to the customer.

Refer to the procedure described in "3.5.2. Initial Settings" for details.

**[ IMPORTANT ]**

1. The initial setting should be done again after completing the alignment. Otherwise, the camera will not work properly. Therefore as a warning, the camera display a warning symbol "!" on the LCD monitor every time the camera is turned off.
2. Confirm that status of all adjustment flag show "F". Even if one of the adjustment flag shows "0", initial setting programmed is never executed.

# 11 Maintenance

## 11.1 Cleaning Lens, Viewfinder and LCD Panel

Do not touch the surface of lens, Viewfinder and LCD Panel with your hand.

When cleaning the lens, use air-blower to blow off the dust.

When cleaning the LCD Panel, dampen the lens cleaning paper with lens cleaner, and the gently wipe the its surface.

**Note:**

The Lens Cleaning Kit ; VFK1900BK (Only supplied as 10 set/Box) is available as Service Aid.

---

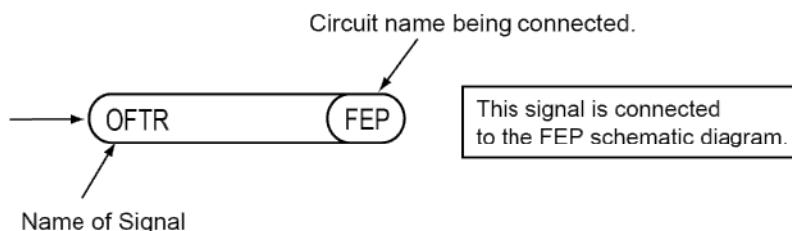

**Model No. : DMC-FZ2000/FZ2500 Schematic Diagram Note**

---

**IMPORTANT SAFETY NOTICE:**

COMPONENTS IDENTIFIED WITH THE MARK  HAVE THE SPECIAL CHARACTERISTICS FOR SAFETY. WHEN REPLACING ANY OF THESE COMPONENTS USE ONLY THE SAME TYPE.

1. Although reference number of the parts is indicated on the P.C.B. drawing and/or schematic diagrams, it is NOT mounted on the P.C.B. when it is displayed with "\$" mark.
2. It is only the "Test Round" and no terminal (Pin) is available on the P.C.B. when the TP (Test Point) indicated as "●" mark.
3. Use the parts number indicated on the Replacement Parts List .
4. Indication on Schematic diagrams:

5. It might be taking time for display and/or access of the Schematic Diagrams & P. C. B. having the heavy data volume.

---

**Model No. : DMC-FZ2000/FZ2500 Parts List Note**

---

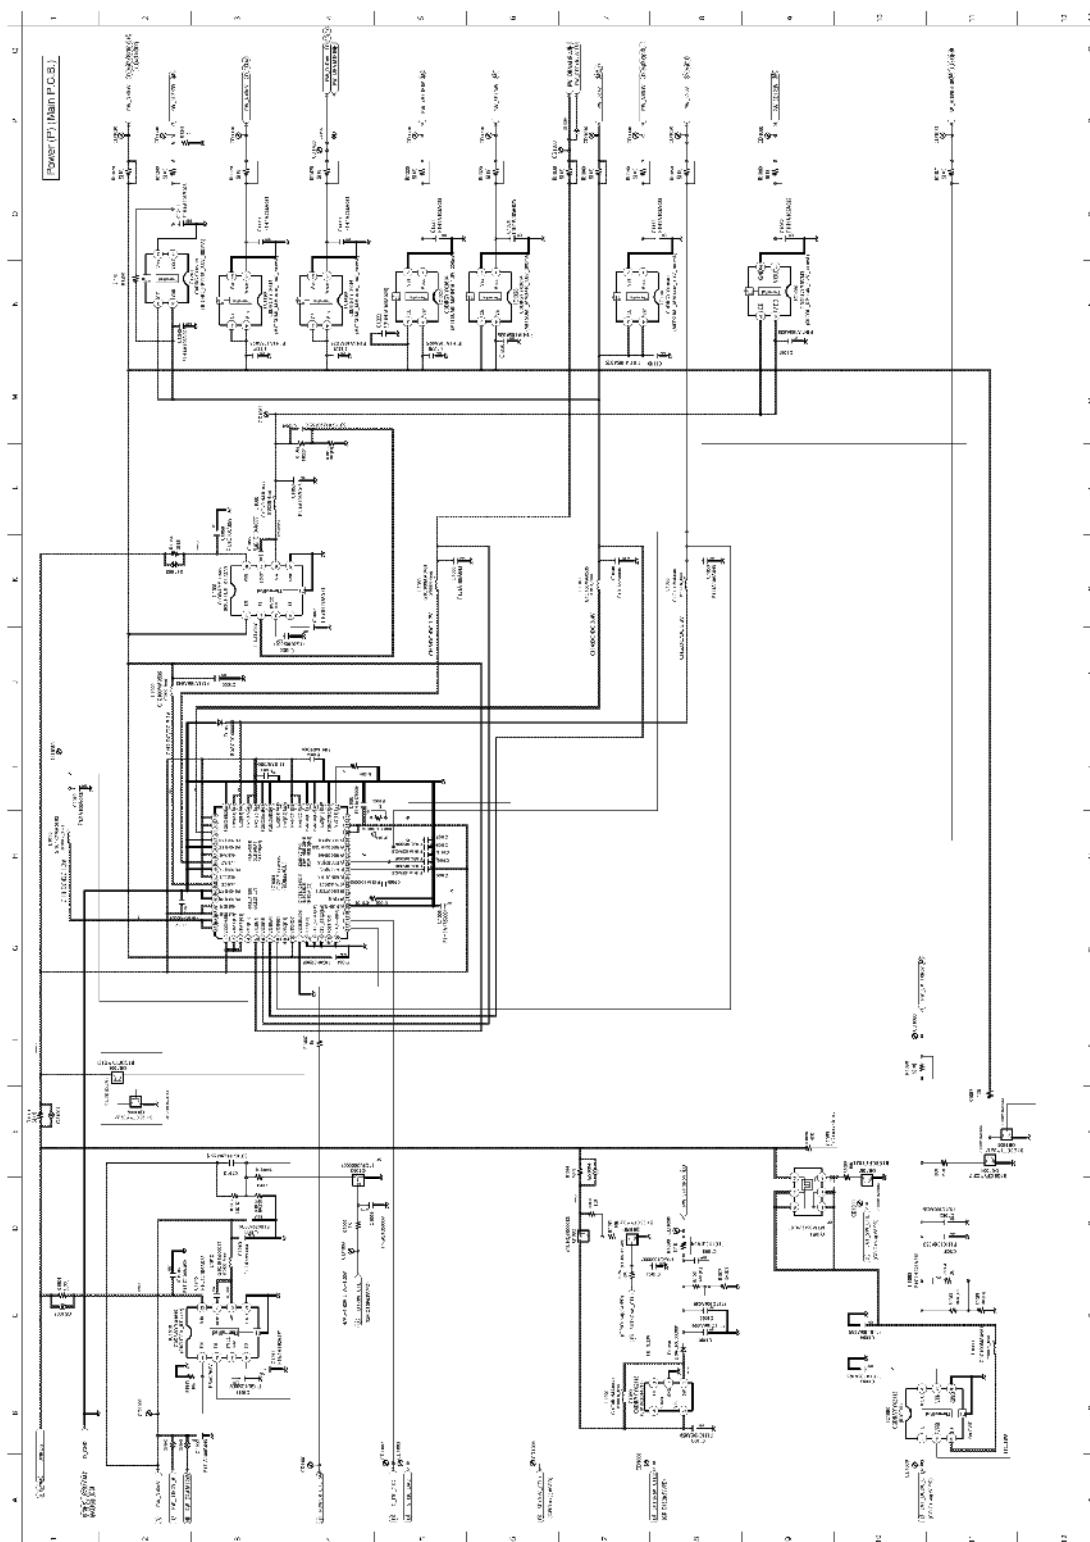

Note:

1. \* Be sure to make your orders of replacement parts according to this list.
2. **IMPORTANT SAFETY NOTICE**  
Components identified with the mark  $\Delta$  have the special characteristics for safety.  
When replacing any of these components, use only the same type.
3. Unless otherwise specified.  
All resistors are in OHMS, K=1,000 OHMS. All capacitors are in MICRO-FARADS (uf), P=uuF.
4. The marking (RTL) indicates the retention time is limited for this item. After the discontinuation of this assembly in production, it will no longer be available.
5. Supply of CD-ROM or DVD, in accordance with license protection, is allowable as replacement parts only for customers who accidentally damaged or lost their own.

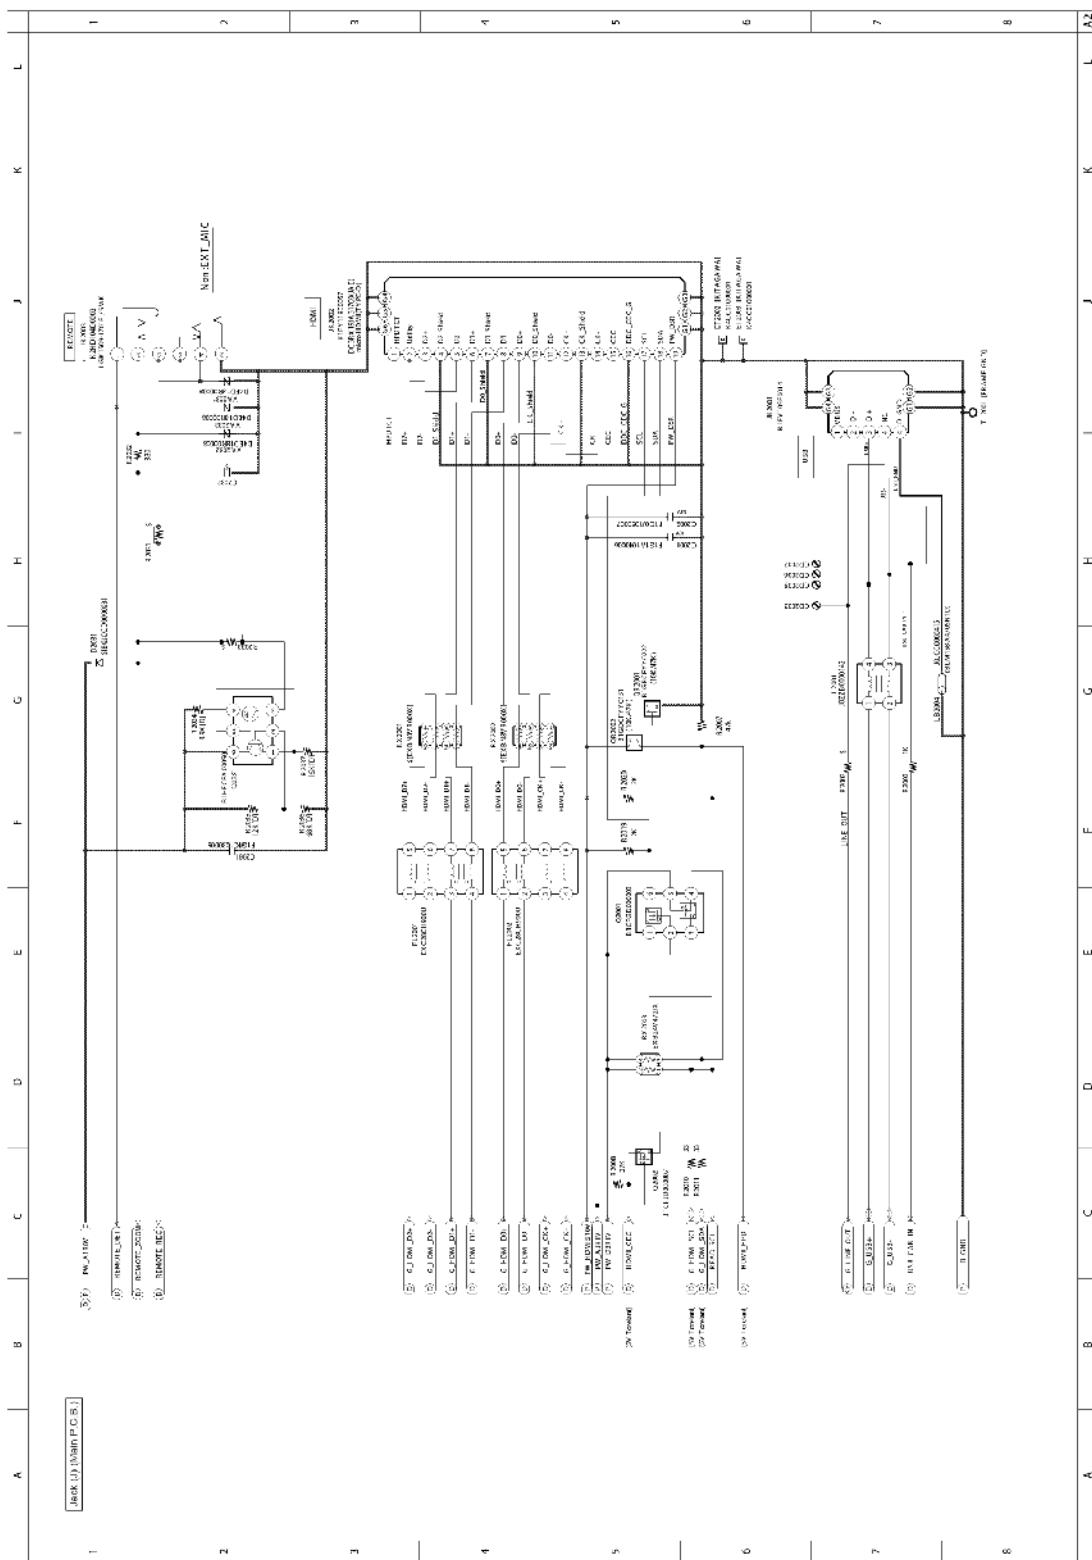

**E.S.D. standards for Electrostatically Sensitive Devices, refer to PREVENTION OF ELECTROSTATIC DISCHARGE (ESD) TO ELECTROSTATICALLY SENSITIVE (ES) DEVICES section.**

**Definition of Parts supplier:**

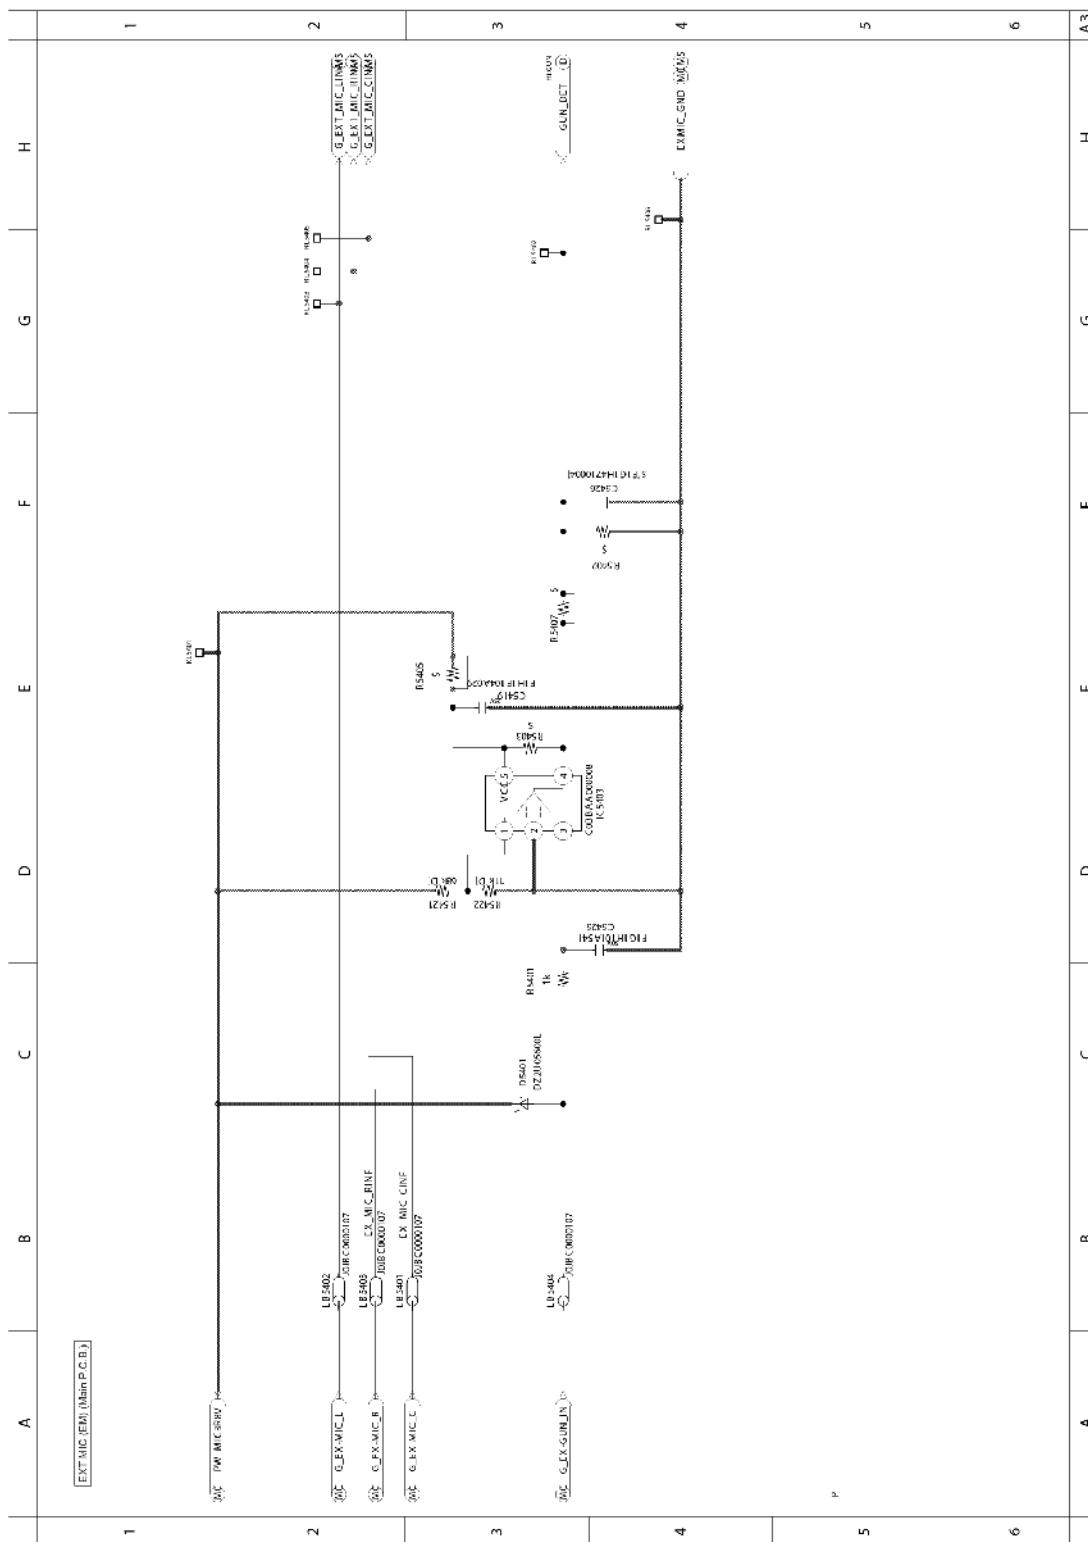

1. Parts marked with [INBD] in the remarks column are supplied from AVC-IMAGING.  
Others are supplied from PAVCX.
