Model shown is KX-TG5673.

(Base Unit)

KX-TG5671S
KX-TG5672B
KX-TG5673B
KX-TGA560S
KX-TGA560B

5.8 GHz Digital Cordless Answering System

Silver Version

Black Version

(for U.S.A.)

Configuration for each model

Model No	Base Unit	Handset	Charger Unit	Expandable
KX-TG5671	1	1 (TGA560)		Non-expandable
KX-TG5672	1	2 (TGA560)	1	Expandable to 3
KX-TG5673	1	3 (TGA560)	2	Fully expanded as supplied
KX-TGA560*		1	1	

* KX-TGA560 is also an optional accessory for KX-TG5672/5673, which contains a handset and a charger.

SPECIFICATION

	Base Unit	Handset	Charger
Power Supply	AC Adaptor (PQLV1W, 120 V AC, 60 Hz)	Rechargeable Ni-MH battery (3.6 V, 830 mAh) HHR-P104	AC Adaptor (KX-TCA1-2, 120 V AC, 60Hz)
Power Output	200 mW (max.)	200 mW (max.)	—
Receiving/Transmitting Frequency	89 channels within 5.76GHz-5.84GHz	89 channels within 5.76GHz-5.84GHz	—
Receiving Method	Super Heterodyne	Super Heterodyne	—
Oscillation Method	PLL synthesizer	PLL synthesizer	—
Detecting Method	Quadrature Discriminator	Quadrature Discriminator	—
Tolerance of OSC Frequency	13.824MHz±270Hz	13.824MHz±100Hz	—
Modulation Method	Frequency Modulation	Frequency Modulation	—
Spread spectrum Method	Frequency Hopping Spread spectrum	Frequency Hopping Spread spectrum	—
ID Code	19bit	22bit	—
Security Codes	—	1,000,000	—
Ringer Equivalence No. (REN)	0.1B	—	—
Dialing Mode	—	Tone (DTMF)/Pulse	—
Redial	—	Up to 48 digits	—
Speed Dialer	—	Up to 32 digits (Phonebook)	—
Power Consumption	Standby: Approx. 2.2W, Maximum: Approx. 4.7W	11 days at Standby, 5 hours at Talk	Standby: Approx. 0.8W, Maximum: Approx. 3.6W
Operating Environment	5°C - 40°C (41°F - 104°F)	5°C - 40°C (41°F - 104°F)	5°C - 40°C (41°F - 104°F)
Dimensions (H x W x D)	Approx. 96mm × 210mm × 157mm (3 ²⁵ / ₃₂ " × 8 ¹ / ₄ " × 6 ³ / ₁₆ "	Approx. 173mm × 48mm × 33mm (6 ¹³ / ₁₆ " × 1 ⁷ / ₈ " × 1 ⁵ / ₁₆ "	Approx. 51mm × 88mm × 100mm (2" × 3 ⁵ / ₃₂ " × 3 ¹⁵ / ₁₆ "
Mass (Weight)	Approx. 405 g (0.89 lb.)	Approx. 170 g (0.37 lb.)	Approx. 94 g (0.21 lb.)

- Optional Headset: KX-TCA60, KX-TCA86, KX-TCA88HA, KX-TCA91, KX-TCA92, or KX-TCA98
- Design and specifications are subject to change without notice.
- The illustrations in this Service Manual may vary slightly from the actual product.

IMPORTANT INFORMATION ABOUT LEAD FREE, (PbF), SOLDERING

If lead free solder was used in the manufacture of this product the printed circuit boards will be marked PbF.

Standard leaded, (Pb), solder can be used as usual on boards without the PbF mark.

When this mark does appear, please read and follow the special instructions described in this manual on the use of PbF and how it might be permissible to use Pb solder during service and repair work.

WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

When you note the serial number, write down all 11 digits. The serial number may be found on the bottom of the unit.

Note:

Because CONTENTS 4 is the extract from the Operating Instructions of this model, it is subject to change without notice. You can download and refer to the original Operating Instructions on TSN Server for further information.

1 ABOUT LEAD FREE SOLDER (PbF: Pb free)

Note:

In the information below, Pb, the symbol for lead in the periodic table of elements, will refer to standard solder or solder that contains lead.

We will use PbF solder when discussing the lead free solder used in our manufacturing process which is made from Tin (Sn), Silver (Ag), and Copper (Cu).

This model, and others like it, manufactured using lead free solder will have PbF stamped on the PCB. For service and repair work we suggest using the same type of solder although, with some precautions, standard Pb solder can also be used.

Caution

- PbF solder has a melting point that is 50°F ~ 70° F (30°C ~ 40°C) higher than Pb solder. Please use a soldering iron with temperature control and adjust it to 700°F ± 20° F (370°C ± 10°C). In case of using high temperature soldering iron, please be careful not to heat too long.
- PbF solder will tend to splash if it is heated much higher than its melting point, approximately 1100°F (600°C).
- If you must use Pb solder on a PCB manufactured using PbF solder, remove as much of the original PbF solder as possible and be sure that any remaining is melted prior to applying the Pb solder.
- When applying PbF solder to double layered boards, please check the component side for excess which may flow onto the opposite side (See the figure below).

1.1. Suggested PbF Solder

There are several types of PbF solder available commercially. While this product is manufactured using Tin, Silver, and Copper (Sn+Ag+Cu), you can also use Tin and Copper (Sn+Cu), or Tin, Zinc, and Bismuth (Sn+Zn+Bi). Please check the manufacturer's specific instructions for the melting points of their products and any precautions for using their product with other materials.

The following lead free (PbF) solder wire sizes are recommended for service of this product: 0.3mm, 0.6mm and 1.0mm.

0.3mm X 100g	0.6mm X 100g	1.0mm X 100g

1.2. How to Recognize that Pb Free Solder is Used

(Example: Handset P.C.B.)

Note:

The location of the "PbF" mark is subject to change without notice.

2 FOR SERVICE TECHNICIANS

ICs and LSIs are vulnerable to static electricity.

When repairing, the following precautions will help prevent recurring malfunctions.

1. Cover plastic parts boxes with aluminum foil.
2. Ground the soldering irons.
3. Use a conductive mat on worktable.
4. Do not grasp IC or LSI pins with bare fingers.

3 CAUTION

Danger of explosion if battery is incorrectly replaced.

Replace only with the same or equivalent type recommended by the manufacturer.

Dispose of used batteries according to the manufacturer's Instructions.

4 OPERATING INSTRUCTIONS

4.1. Battery

4.1.1. Battery Installation/Replacement

- 1 Press the notch of the handset cover firmly, and slide it in the direction of the arrow.
 - If necessary, remove the old battery.

- 2 Insert the battery (1), and press it down until it snaps into position (2). Then close the handset cover.

Important:

- Use only the rechargeable Panasonic battery HHR-P104.

Attention:

A nickel metal hydride battery that is recyclable powers the product you have purchased. Please call 1-800-8-BATTERY (1-800-822-8837) for information on how to recycle this battery.

4.1.2. Battery Charge

Place the handset on the base unit or charger for **7 hours** before initial use. While charging, "**Charging**" is displayed and the CHARGE indicator on the base unit lights. When the battery is fully charged, "**Charge completed**" is displayed.

Note:

- If you want to use the unit immediately, charge the battery for at least 15 minutes.
- To ensure that the battery charges properly, clean the charge contacts of the handset, base unit, and charger with a soft, dry cloth. Clean if the unit is subject to the exposure of grease, dust, or high humidity.

Base unit:

Charger:
(KX-TG5672/KX-TG5673 only)

Note for service:

The battery strength may not be indicated correctly if the battery is disconnected and connected again, even after it is fully charged. In that case, by recharging the battery as mentioned above, you will get a correct indication of the battery strength.

4.1.3. Battery Level

Battery icon	Battery level
	Fully charged
	Medium
	Low Flashing: needs to be recharged.
	Empty

Note:

- When the battery needs to be charged, the handset beeps intermittently while it is in use.

4.1.4. Panasonic Battery Performance

Operation	Operating time
While in use (talking)	Up to 5 hours
While not in use (standby)	Up to 11 days
While using the clarity booster feature	Up to 3 hours

Note:

- Battery operating time may be shortened over time depending on usage conditions and surrounding temperature.
- Battery power is consumed whenever the handset is off the base unit or charger, even when the handset is not in use. Hence the longer you leave the handset off the base unit or charger, the less time you may actually talk using the handset.
- After the handset is fully charged, displaying "**Charge completed**", it may be left on the base unit (or charger) without any ill effect on the battery.
- The battery level may not be displayed correctly after you replace the battery. In this case, place the handset on the base unit (or charger) and let charge for 7 hours.

4.2. Location of Controls

4.2.1. Base Unit

Note:

- Some operations not mentioned above are displayed as soft key selections during operation.

Example: [Mute]

4.3. Displays

4.3.1. Display Items

Base unit display items

Displayed item	Meaning
FULL	Flashes when message memory is full.
⌚	Flashes when the date and time need to be set.
RINGER OFF	Base unit ringer is off.
<i>E</i>	Greeting or memo message recording error
<i>G</i> □	Answering system is in greeting only mode (caller messages are not recorded).
<i>H</i> !	Handset number; displayed when paging, being paged, or registering*1.
<i>P</i>	Base unit is in programming mode.

*1 KX-TG5672/KX-TG5673 only

Handset display items

Displayed item	Meaning
ⓋⓋ	Voice enhancer is on.
■ ■ ■	Battery level

4.3.2. Troubleshooting (Handset LCD)

If the unit detects a problem, one of the following messages is shown on the display.

Display message	Cause/solution
Busy	• The called base unit is in use. • Another handset or the called handset is in use.*¹ • The handset you tried to copy phonebook items to is in use.*¹ • The handset you are calling is too far from the base unit.*¹
Error!!	• The handset's registration has failed. Move the handset and base unit away from all electrical appliances and try again. • Another handset user tried to send phonebook items to you but there was an error. Have the other handset user re-send the items to you.*¹
---Incomplete--- Phonebook full*¹	• The destination unit's phonebook memory is full. Erase unnecessary items from the destination unit's phonebook.
Invalid*¹	• There is no handset registered to the base unit matching the extension number you entered.
No items stored	• Your phonebook or redial list is empty.
No link to base. Move closer to base, try again.	• The handset has lost communication with the base unit. Move closer to the base unit, and try again. • Confirm that the base unit's AC adaptor is plugged in. • Raise the base unit antennas. • The handset's registration may have been canceled. Re-register the handset.
Phonebook full	• There is no space to store new items in the phonebook. Erase unnecessary items.
Please lift up and try again.	• A handset button was pressed while the handset was on the base unit or charger. Lift the handset and press the button again.
System is busy. Please try again later.	• Other units are in use and the system is busy. Try again later. • Another user is listening to messages. Try again later.

*¹ KX-TG5672/KX-TG5673 only

4.4. Settings

4.4.1. Connecting the AC Adaptor and Telephone Line Cord

Connect the telephone line cord until it clicks into the base unit (❶) and telephone line jack (❷). Connect the AC adaptor cord by pressing the plug firmly (❸).

- Use only the included Panasonic AC adaptor PQLV1W.

Note:

- The AC adaptor must remain connected at all times. (It is normal for the adaptor to feel warm during use.)
- The AC adaptor should be connected to a vertically oriented or floor-mounted AC outlet. Do not connect the AC adaptor to a ceiling-mounted AC outlet, as the weight of the adaptor may cause it to become disconnected.
- The unit will not work during a power failure. We recommend connecting a standard telephone to the same telephone line or to the same telephone jack using a Panasonic T-adaptor. Emergency power can be supplied to the unit by connecting a Panasonic battery back-up power supply KX-TCA200.

If you subscribe to a DSL service

Please attach a noise filter (contact your DSL provider) to the telephone line between the base unit and the telephone line jack in the event of the following:

- Noise is heard during conversations.
- Caller ID features do not function properly.

4.4.2. Connecting the Charger (KX-TG5672/KX-TG5673 only)

- Use only the included Panasonic AC adaptor KX-TCA1-2.

4.4.3. Programmable Settings

You can customize the unit by programming the following features using the handset. To access the features, there are 2 methods: scrolling through the display menus or using the direct commands.

- Mainly the direct command method is used in this Service Manual.

4.4.3.1. Programming by Scrolling through the Display Menus

1 [MENU]

2 Press [▲] or [▼] to select the desired menu. → [Select]

- If there are sub-menu(s), press [▲] or [▼] to select the desired item. → [Select]

Example: To access the handset ringer tone setting

Press [▲] or [▼] to select "**Ringer setting**". → [Select]

Then press [▲] or [▼] to select "**Ringer tone**". → [Select]

3 Press [▲] or [▼] to select the desired setting.

- This step may vary depending on the feature being programmed.

4 [Save] → [OFF]

Main menu	Sub-menu 1	Sub-menu 2

^{*1} If you program these settings using one of the handsets, you do not need to program the same item using another handset (KX-TG5672/KX-TG5673 only).

^{*2} KX-TG5672/KX-TG5673 only

4.4.3.2. Programming Using the Direct Commands

1 [MENU]

2 Enter the desired feature code.

3 Enter the desired setting code.

- This step may vary depending on the feature being programmed.

4 [Save] → [OFF]

Note:

- In the following table:
 - < > shows the default setting.
 - If “System setting” column is checked, you do not need to program the same item using another handset (KX-TG5672/KX-TG5673 only).
- If you make a mistake or enter the wrong code, press [OFF], then start again by pressing [MENU].

*1 If you subscribe to Caller ID service and want to view the caller's information after lifting up the handset to answer a call, turn off this feature.

*2 KX-TG5672/KX-TG5673 only

*3 You can select whether or not key tones are heard when keys are pressed. Includes confirmation tones and error tones.

*4 If you subscribe to a distinctive ring service (such as IDENT-A-RING), select a tone (tone 1 to 3). If you select a melody, you cannot distinguish lines by their ringers.

*5 The flash time depends on your telephone exchange or host PBX. Consult your PBX supplier if necessary. The setting should stay at "700ms" unless pressing **[FLASH]** fails to pick up the call waiting call.

*6 Generally, the line mode setting should not be adjusted. If "Line in use" is not displayed when another phone connected to the same line is in use, you need to change the line mode to "A".

*7 This feature allows the unit to automatically adjust the date and time setting when caller information is received. To use this feature, set the date and time first.

Customer support

The handset can display the Internet address where you can download operating instructions or get further information for this product using your computer.

[MENU] → "Customer support" → **[Select]** → **[OFF]**

4.5. Troubleshooting

If the handset display shows error messages, see “**Troubleshooting (Handset LCD)** (P.12)” for the Cause & Solution.

General use

Problem	Cause/solution
The unit does not work.	• Make sure the battery is installed correctly and fully charged. • Check the connections. • Unplug the base unit's AC adaptor to reset the unit. Reconnect the adaptor and try again. • The handset has not been registered to the base unit. Register the handset.
I cannot hear a dial tone.	• Confirm the telephone line cord is properly connected. • Disconnect the unit from the telephone line and connect a known working telephone. If the working telephone operates properly, contact our service personnel to have the unit repaired. If the working telephone does not operate properly, contact your telephone company.

Programmable settings

Problem	Cause/solution
I cannot program items.	• While another user is listening to messages or the answering system is answering a call, you cannot program items. Try again later.
While programming, the handset starts to ring.	• A call is being received. Answer the call and start again after hanging up.

Battery recharge

Problem	Cause/solution
I charged the battery fully, but  continues to flash, or  is displayed.	• Clean the charge contacts and charge again. • The battery may need to be replaced with a new one.
The handset display is blank.	• Confirm that the battery is properly installed. • Fully charge the battery.

Making/answering calls, intercom

Problem	Cause/solution
Static is heard, sound cuts in and out. Interference from other electrical units.	● Move the handset and the base unit away from other electrical appliances. ● Move closer to the base unit. ● Raise the base unit antennas. ● Turn on the clarity booster feature. ● If your unit is connected to a telephone line with DSL service, we recommend connecting a noise filter between the base unit and the telephone line jack. Contact your DSL provider for details.
The handset and base unit do not ring.	● The ringer volume is turned off. Adjust it.
I cannot make a call.	● The dialing mode may be set incorrectly. Change the setting. ● The base unit or another handset is in use. Try again later.
I cannot redial by pressing [REDIAL] .	● If the last number dialed was more than 48 digits long, the number will not be redialed correctly. Dial the number manually.
I cannot have a conversation using the headset.	● Make sure that an optional headset is connected properly. ● If "SP-phone" is displayed on the handset, press [↶] to switch to the headset.
I cannot make long distance calls.	● Make sure that you have long distance service.
I cannot page the handset or base unit.	● The called handset is too far from the base unit. ● The called unit is in use. Try again later.
The Slow Talk feature does not work.	● If you are on a conference call, you cannot use the Slow Talk feature. ● If another handset is having an intercom call with the base unit, you cannot use the Slow Talk feature.*1 ● If someone is operating the answering system, you cannot use the Slow Talk feature.

*1 KX-TG5672/KX-TG5673 only

Phonebook

Problem	Cause/solution
Copying stopped with an item displayed.*1	● The destination handset may have lost communication with the base unit, or the destination unit user may have pressed [↶] or [📞]. The displayed phonebook item was not copied to the unit. Press [OFF]. Confirm that the destination unit is not in use and try again.

*1 KX-TG5672/KX-TG5673 only

Caller ID

Problem	Cause/solution
The handset does not display the caller's name and/or phone number.	• You have not subscribed to Caller ID service. Contact your telephone company to subscribe. • If your unit is connected to any additional telephone equipment such as a Caller ID box or cordless telephone jack, disconnect the unit from the equipment and plug the unit directly into the wall jack. • If your unit is connected to a telephone line with DSL service, we recommend connecting a noise filter between the base unit and the telephone line jack. Contact your DSL provider for details. • The name display service may not be available in some areas. Contact your telephone company for details. • Other telephone equipment may be interfering with this unit. Disconnect the other equipment and try again. • The caller requested not to send caller information. • If a call is being transferred to you, the caller information is not displayed.
The handset or base unit does not announce the displayed caller names.	• The handset or base unit's ringer volume is turned off. Adjust it. • The Talking Caller ID feature is turned off. Turn it on. • The ring count for the answering system is set to "2" or "Toll saver". Select a different setting. • If the base unit and another handset are having an intercom call, your handset does not announce caller information.*1
The caller list/incoming phone numbers are not edited automatically.	• The Caller ID number auto edit feature is turned off. Turn it on and try again. • You need to call back the edited number to activate Caller ID number auto edit.
I cannot dial the phone number edited in the caller list.	• The phone number you dialed might have an incorrectly edited pattern (for example, the long distance "1" or the area code is missing). Edit the phone number with another pattern.
The 2nd caller's information is not displayed during an outside call.	• In order to use Caller ID, Call Waiting, or Call Waiting Caller ID (CWID), you must first contact your telephone company and subscribe to the desired service. After subscribing, you may need to contact your telephone company again to activate this specific service, even if you already subscribed to both Caller ID and Call Waiting with Caller ID services (CWID).

*1 KX-TG5672/KX-TG5673 only

Answering system

Problem	Cause/solution
I cannot listen to messages from a remote location.	• A touch tone phone is required for remote operation. • Enter the remote code correctly. • The answering system is off. Turn it on.
The unit does not record new messages.	• The answering system is off. Turn it on. • The recording time is set to "Greeting only". Select a different setting. • The message memory is full. Erase unnecessary messages. • If you subscribe to the Voice Mail service, messages are recorded by the telephone company not your telephone.
I cannot operate the answering system.	• Someone is operating the answering system. • If someone is talking on a conference call, you cannot operate the answering system. Try again later.^{*1}
The message indicator on the handset flashes.	• New messages have been recorded. Listen to the new messages.

5 DISASSEMBLY INSTRUCTIONS

5.1. Base Unit

Fig. 1

Fig. 2

Shown in Fig.-	To Remove -	Remove -
1	Cabinet Cover	Screws (2.6 × 12).....(A) × 5
	Main P. C. Board	Tapes, Solders and Cable
		Main P. C. Board
2	Operational P. C. Board	Tape
		Screws (2.6 × 8).....(B) × 8
		Operational P. C. Board

5.2. Handset

Fig. 3

Fig. 5

Insert a JIG (PQDJ10006Y) between the Cabinet Body and the Cabinet Cover, then pull it along the gap to open the Cabinet.

Likewise, open the other side of the Cabinet.

* Be careful not to damage LED. Refer to Fig. 5.

Remove the Cabinet Cover by pushing it upward.

Fig. 4

Shown in Fig.-	To Remove -	Remove -
3	Cabinet Cover	Screws (2 × 14).....(C) × 2
4		Follow the procedure.
5	Main P. C. Board	Tape and Solders
		Screws (2 × 9).....(D) × 3
		Main P. C. Board

5.3. Charger Unit

	Main P.C.Board	Main P.C.Board

6 HOW TO REPLACE THE HANDSET LCD

①

Remove the tape, and then peel off the FFC (Flexible Flat Cable) of LCD in the direction of the arrow not to damage the foil on the P.C. Board.

②

Fit the Heatseal of a New LCD to the P.C. Board.

③

Press the Heatseal with the Tip of Soldering Iron about 5 to 8 seconds (in case of 60W soldering iron).

④

Stick the Tape* over the Heatseal.
* Use the Tape which was removed first.

7 TROUBLESHOOTING GUIDE

FLOW CHART

Cross Reference:

Check Power (P.27)
Error Message Table (P.27)
Check Playback (P.29)
Check Record (P.28)
Check Sp-phone Transmission (P.29)
Check Sp-phone Reception (P.30)
Check Battery Charge (P.30)
Check Link (P.31)
Check the RF part (P.32)
Check Handset Transmission (P.39)
Check Handset Reception (P.39)
Check Caller ID (P.39)

Note:

(*1) When a user claims that the unit disconnects a call right after the greeting message and no incoming messages can be recorded, this symptom can not be reappeared with TEL simulator in the service center. So in that case try **Check Record** (P.28) item (C), (D).

7.1. Check Power

BASE UNIT

Is the AC Adaptor inserted into AC outlet? (*1)

Cross Reference:

Power Supply Circuit (P.60)

Reset Circuit (P.62)

Note:

Flash Memory is IC601.

DSP is IC501.

(*1) Refer to “**SPECIFICATION**” on cover page for part number and supply voltage of AC adaptor.

7.2. Error Message Table

Display	Symptom	Remedy
E1	The initialization was tried, but it could not be done.	1. Check the peripheral circuit of Flash Memory visually.
E3 E9	When the adjustment data was checked, an error was detected. (The adjustment data may not be written.)	2. Confirm that the voltage is added to the power supply pin. If no voltage is detected, replace the Flash Memory because it might be defect. 3. Solder the Flash Memory again.

Note:

Flash Memory is IC601.

DSP is IC501.

7.3. Check Record

BASE UNIT

A) Not record Greeting Message

B) Not record Incoming Message

C) How to change the Auto Disconnect activation (time)

Some Telephone Company lines (fiber or cable) ON Hook and OFF Hook voltages are lower than conventional lines, which may cause a malfunction of Auto Disconnect detection. To solve this problem, try changing the Auto Disconnect activation through the procedures below.

Auto Disconnect detect	CPC detect	PROCEDURE at Stand-by mode
Enable*1		"STOP"+"GREETING CHECK"+"["<<"]" simultaneously
Enable*1 [default]	Disable	"STOP"+"GREETING CHECK"+"VOL. [▲]" simultaneously
Disable*2		"STOP"+"GREETING CHECK"+"VOL. [▼]" simultaneously

Note:

*1 Both Auto Disconnect and CPC don't detect for the first 2 seconds.

*2 If the "Disable" is selected, even if the parallel-connected telephone is OFF HOOK, the line isn't disconnected.

D) How to change the VOX level

It makes easier to detect a small voice (caller) by raising the sensitivity of VOX level. Therefore, the recording of TAM is not turned off during a detection.

VOX Level sensitivity	PROCEDURE
Normal [default]	"STOP"+"INTERCOM" + "VOL. [▲]" simultaneously
10 dB Up	"STOP"+"INTERCOM" + "VOL. [▼]" simultaneously

Note:

Flash Memory is IC601.

DSP is IC501.

7.7. Check Battery Charge

BASE UNIT

HANDSET

CHARGER UNIT

Note:

Flash Memory is IC601.

DSP is IC501.

(*1) Refer to "SPECIFICATION" on cover page for part number and supply voltage of AC adaptor.

7.8. Check Link

BASE UNIT

Note:

Flash Memory is IC601.

DSP is IC501.

(*1) Refer to **Finding out the Defective part** (P.32).

HANDSET

Cross Reference:

Check the RF part (P.32)

7.9. Check the RF part

7.9.1. Finding out the Defective part

1. Prepare Regular HS(*1) and Regular BU(*2).
2. a. Re-register regular HS (Normal mode) to Base Unit (to be checked).
If this operation fails in some ways, the Base Unit is defective.
- b. Re-register Handset (to be checked) to regular BU (Normal mode).
If this operation fails in some ways, the Handset is defective.

After All the Checkings or Repairing

1. Re-register the checked Handset to the checked Base Unit, and Regular HS to Regular BU.

Note:

- (*1) HS: Handset
(*2) BU: Base Unit

7.9.1.1. Registering a Handset

The included handset and base unit are preregistered. If for some reason the handset is not registered to the base unit, register the handset. Lift the handset from the base unit or charger before registering.

KX-TG5671

- 1 Handset:**
[MENU] → [0][0]
- 2 Base unit:**
Press and hold [INTERCOM] until the CHARGE indicator flashes.
 - After the CHARGE indicator starts flashing, the rest of the procedure must be completed within 1 minute.
- 3 Handset:**
Press [OK], then wait until the handset beeps.

KX-TG5672/KX-TG5673

Important:

- If you accidentally assign another handset's extension number to the base unit, the originally assigned handset stops functioning. Confirm the extension number of the handset by placing it on the base unit or charger. Lift the handset from the charger before registering.

- 1 Handset:**
[MENU] → [0][0]
- 2 Base unit:**
Press and hold [INTERCOM] until the CHARGE indicator flashes, then press [↵], [↵], or [↵].
 - After the CHARGE indicator starts flashing, the rest of the procedure must be completed within 1 minute.
- 3 Handset:**
Press [OK], then wait until the handset beeps.

KX-TG5672/KX-TG5673 only

If you have not canceled the handset's registration at the previous base unit, the handset number remains in that base unit's memory. To erase the handset number from the previous base unit, follow the next procedure.

[Example: Erasing H3]

- (1) Register the handset already registered in H1 again in H3.
- (2) Re-register the handset back to H1 leaving H3 empty.

7.9.2. RF Check Flowchart

Each item (1 ~ 6) of RF Check Flowchart corresponds to **Check Table for RF part** (P.35).

Please refer to the each item.

7.9.3. Check Table for RF part

No.	Item	BU (Base Unit) Check	HS (HandSet) Check
1	Link Confirmation Normal HS, BU Mode [Normal Mode]	1. Register Regular HS to BU (to be checked). 2. Press [Talk] key of the Regular HS to establish link.	1. Register HS (to be checked) to Regular BU. 2. Press [Talk] key of the HS to establish link.
2	Control signal confirmation HS, BU Mode: [Test Burst Mode] (*1)	Check DSP interface. (*2)	Check DSP interface. (*2)
3	X'tal Frequency confirmation (*7) HS, BU Mode: [Adjustment] (*3)	Check X'tal Frequency. (13.824000MHz $\pm$ 270Hz)	Check X'tal Frequency. (13.824000MHz $\pm$ 100Hz)
4	TX Power confirmation Regular HS, BU Mode: [RX-CW Mode.] (*4) HS, BU (to be checked) Mode: [Test Burst Mode.] (*1)	1. Place the Regular HS about 15cm away from the BU. 2. Confirm that RSSI of the Regular HS is approximately 2V by Oscilloscope. (*5)	1. Place the HS about 15cm away from the Regular BU. 2. Confirm that RSSI of the Regular BU is approximately 2V by Oscilloscope. (*6)
5	RX Sensitivity confirmation Regular HS, BU Mode: [Test Burst Mode.] (*1) HS, BU (to be checked) Mode: [RX-CW Mode.] (*4)	1. Place the Regular HS about 15cm away from the BU. 2. Confirm that RSSI of the BU is approximately 2V by Oscilloscope. (*5)	1. Place the HS about 15cm away from the Regular BU. 2. Confirm that RSSI of the HS is approximately 2V by Oscilloscope. (*6)
6	Range Confirmation Normal HS, BU Mode: [Normal Mode]	1. Register Regular HS to BU (to be checked). 2. Press [Talk] key of the Regular HS to establish link. 3. Compare the range of the BU (being checked) with that of the Regular BU.	1. Register HS (to be checked) to Regular BU. 2. Press [Talk] key of the HS to establish link. 3. Compare the range of the HS (being checked) with that of the Regular HS.

Note:

7.9.4. TEST RANGE Check

Circuit block which range is defective can be found by the following check.

Item	BU (Base Unit) Check	HS (HandSet) Check
Range Confirmation TX TEST (TX Power check) HS, BU Mode: [Test Link Mode] (*1)	1. Register Regular HS to BU (to be checked). 2. Set BU to "Test Link mode". 3. Set Regular HS to "Test Link mode". *Set TX Power and RX Sensitivity of the BU and the Regular HS by CHART1. * At distance of about 20m between HS and BU, Link OK = TX Power of the BU is OK. No Link = TX Power of the BU is NG.	1. Register HS (to be checked) to Regular BU. 2. Set Regular BU to "Test Link mode". 3. Set HS to "Test Link mode". *Set TX Power and RX Sensitivity of the HS and the Regular BU by CHART1. * At distance of about 20m between HS and BU, Link OK = TX Power of the HS is OK. No Link = TX Power of the HS is NG.
Range Confirmation RX TEST (RX sensitivity check) HS, BU Mode: [Test Link Mode] (*1)	1. Register Regular HS to BU (to be checked). 2. Set BU to "Test Link mode". 3. Set Regular HS to "Test Link mode". *Set TX Power and RX Sensitivity of the BU and Regular HS by CHART1. * At distance of about 20m between HS and BU, Link OK= RX Sensitivity of the BU is OK. No Link = RX Sensitivity of the BU is NG.	1. Register HS (to be checked) to Regular BU. 2. Set Regular BU to "Test Link mode". 3. Set HS to "Test Link mode". * Set TX Power and RX Sensitivity of Checking_HS and Regular_BU by CHART1. * At distance of about 20m between HS and BU, Link OK= RX Sensitivity of the HS is OK. No Link = RX Sensitivity of the HS is NG.

CHART1: Setting of TX Power and RX Sensitivity in Range Confirmation TX TEST, RX TEST

	BU (to be checked)		Regular_HS	
	TX Power	RX Sens.	TX Power	RX Sens.
BU (Base Unit) TX Power Check	High	High	High	Low
BU (Base Unit) RX Sensitivity Check	High	High	Low	High

	HS (to be checked)		Regular_BU	
	TX Power	RX Sens.	TX Power	RX Sens.
HS (Handset) TX Power Check	High	High	High	Low
HS (Handset) RX Sensitivity Check	High	High	Low	High

Note:

(*1) **ADJUSTMENT AND TEST MODE** (P.40)

7.9.5. RF-DSP Interface Signal Wave Form

<Test Burst Mode>

SYN_CLK & SYN_DATA

(Length variable)

This wave form can be seen only at the Handset, because DSP of the BU, IC501, writes these signals just once. Therefore, check the DC Voltage of IC801(pin11) is 0.4-2.3V at the BU.

(Length variable)

<Test Burst Mode>

TX & RX

7.10. Check Handset Transmission

Cross Reference:

SIGNAL ROUTE (P.81).

7.11. Check Handset Reception

Cross Reference:

SIGNAL ROUTE (P.81).

Note:

When checking the RF part, Refer to **Check the RF part** (P.32)

7.12. Check Caller ID

BASE UNIT

Cross Reference:

Telephone Line Interface (P.63).

Calling Line Identification (Caller ID)/Call Waiting Caller ID (P.66).

Note:

- Make sure the format of the Caller ID or Call Waiting Caller ID service of the Telephone company that the customer subscribed to.
- Also we recommend to confirm that the customer is really a subscriber of the service.

8 ADJUSTMENT AND TEST MODE

8.1. Test Mode Flow Chart for Base Unit

8.1.1. Test Burst Mode

Note:

(*) LCD displays the Channel number.

(*) Refer to **Check Table for RF part** (P.35) and **RX-CW Test Mode** (P.45) for proper Handset settings.

8.1.2. RX-CW Test Mode

Note:

(*1) LCD displays the Channel number.

(*2) Refer to **Check Table for RF part** (P.35) and **Test Burst Mode** (P.44) for proper Handset settings.

8.1.3. Test Link Mode

Note:

(*1) LCD displays the Channel number.

(*2) LCD displays the number of selected power.

(*3) Refer to **Check Table for RF part** (P.35) and **Test Link Mode** (P.46) for proper Handset settings.

8.1.4. Adjustment Mode

Cross Reference

Check and Adjust X501 (Base Unit) Frequency (P.48)

Note:

(*1) This is an adjustment value (hex.).

8.2. Test Mode Flow Chart for Handset

8.2.1. Test Burst Mode

Note:

(*1) LCD displays the Channel number.

(exception: default/ CH00 = 1ch.)

(*2) Refer to **Check Table for RF part** (P.35) and **RX-CW Test Mode** (P.41) for proper Base Unit settings.

8.2.2. RX-CW Test Mode

Note:

(*1) LCD displays the Channel number.

(exception: default/ CH00 = 1ch.)

(*2) Refer to **Check Table for RF part** (P.35) and **Test Burst Mode** (P.40) for proper Base Unit settings.

8.2.3. Test Link Mode

Note:

(*1) LCD displays the Channel number.

(exception: default/ CH00 = 1ch.)

(*2) for factory use only.

(*3) Refer to **Check Table for RF part** (P.35) and **Test Link Mode** (P.42) for proper Base Unit settings.

8.2.4. Adjustment Mode

Cross Reference

(*1) Adjust Battery Low Detector Voltage (Handset) (P.48)

Note:

(*2) These are the default values.

(*3) These values may not be fixed depending on the battery strength.

8.3. X501 (Base Unit), X201 (Handset) Check

Equipment: Frequency counter

Check Point for measurement: BCK

Checking tolerance: 13.824MHz $\pm$ 270Hz (Base Unit)/13.824MHz $\pm$ 100Hz (Handset)

8.3.1. Check and Adjust X501 (Base Unit) Frequency

1. Set up Base Unit in TEST mode.
2. Press following keys in order to Adjust Crystal mode. [INTERCOM], [INTERCOM], [INTERCOM], [1], [4]. Check BCK frequency.
3. If the BCK frequency is out of the checking tolerance ($\pm$ 270Hz), adjust to Adjustment tolerance ($\pm$ 30Hz) by pressing [$\blacktriangle$] or [$\blacktriangledown$] key.
Adjustment Tolerance: 13.824MHz $\pm$ 30Hz
4. Press [INTERCOM] key to write the new frequency factor in Memory.
5. Turn the power off. Then this value is available.

When you have replaced IC501 and IC601, adjust X501 by the procedure above.

Cross Reference:

Adjustment Mode (P.43)

8.3.2. Check and Adjust X201 (Handset) Frequency

1. Set DC power supply to 3.9V.
2. Set up Handset in TEST mode (Adjustment flow).
3. Press [1] key to Adjust Crystal mode ("Clock Adj." is displayed on LCD). Check BCK frequency.
4. If the BCK frequency is out of the checking tolerance ($\pm$ 100Hz), adjust to Adjustment tolerance ($\pm$ 30Hz) by pressing [$\blacktriangle$] or [$\blacktriangledown$] key.
Adjustment Tolerance: 13.824MHz $\pm$ 30Hz
5. Press [TALK] key to write the new frequency factor in EEPROM.
6. Turn the power off. Then this value is available.

When you have replaced IC201 and IC241, adjust X201 by the procedure above.

Cross Reference:

Adjustment Mode (P.47)

8.4. Adjust Battery Low Detector Voltage (Handset)

After Handset's DSP (IC201) or EEPROM (IC241) replacement, Re-writing Battery Low voltage to EEPROM is required.

With following Handset Adjustment Flow, adjust DC power supply and DC voltmeter by the procedure below.

1. Set DC power supply to 3.9V.
2. Set up Handset in TEST mode (Adjustment flow).
3. Press [1] key and [OFF] key to Adjust Batt Low mode. ("Bat Adj." is displayed on LCD)
4. Change the voltage of the DC power supply to 3.50V accurately. Check the voltage at P.C. board pads because some voltage drops occur due to the usage of long or thin cables.
5. Press [TALK] key to write voltage value in EEPROM.
6. Turn the power off. Then this value is available.

Note:

Refer to **Handset Reference Drawing** (P.50) for connection of DC power supply and voltmeter.

Cross Reference:

Adjustment Mode (P.47)

(*1) is referred to No.3 of Check Table for RF part (P.35)

50

8.8. How to Clear User Setting

Units are reset to the Factory settings by this operation (Erase recorded Voice messages, stored Phone numbers, Caller list and etc.).

This operation should not be performed for a usual repair.

8.8.1. Base Unit

Note:

(*1) Telephone line must be connected.

8.8.2. Handset

Note:

(*1) Be sure to short the battery terminals of the Handset with a lead wire, etc. for 2 seconds for discharge after removing the battery.

9 DESCRIPTION

9.1. Frequency

The frequency range of 5.76GHz-5.84GHz is used. Transmitting and receiving channel between Base Unit and Handset is same frequency. Refer to **Frequency Table** (P.51).

9.2. FHSS (Frequency Hopping Spread Spectrum)

This telephone is using an IC chip which has similar specification to WDCT (World Digital Cordless Telephone) and is the telephone system that can use multiple portable unit simultaneously. The explanation of this system is mentioned below. This system uses a Time Division Multiple Access/Time Division Duplex (**TDMA/TDD**) scheme:

transmitting and receiving frequencies of the Base Unit and Handset are shared in the same frequency. The construction of RX/TX frequency data is shown below. It consists of 4 slots from the Base Unit to the Handset, and 4 slots from the Handset to the Base Unit, total 8 slots in 10ms. By this slot system, simultaneous air link and communication between 4 Handsets and the Base Unit can be realized. One communication between Handset and the Base Unit is done by one slot from the Base Unit to Handset, and another slot from Handset to the Base Unit.

DSS makes spectrum spread by multiplying carrier signal by PN code. The purpose to make spectrum spread is to reduce power density per time and per band. On the other hand, **FHSS** makes spectrum spread by changing channel every 10ms according to Hopping table. Also the purpose to make spectrum spread is to reduce power density per time and per band.

9.2.1. TDD Frame Format

Sync Field (72bit): Preamble 56bit + SyncWord 16bit

Base Unit (Handset) adjusts the timing of reception so that reception of Base Unit (Handset) can correspond to transmission of Handset (Base Unit).

It is necessary for sync-field that Handset gets synchronization.

A - field (64bit): Each kinds of DATA: ch data, line condition, etc.

B - field (320bit + 80bit): Sound data + parity

Z - field (4bit): Parity Check

9.2.2. TDMA system

This system is the cycles of 10ms, and has four duplex paths, so it is possible to perform four duplex communications simultaneously.

In 1 slot 1.25ms, the 10ms of voice data is transmitted.

Each slot makes every frame frequency hop. (100hops/sec.)

Although each slot (UpLink3 and UpLink4) uses different frequency, UpLink3 and DownLink3 use the same frequency.

• 2 - Handsets Link

Traffic Bearer

A link is established between Base Unit and Handset.

The state where duplex communication is performed.

The hopping pattern of a 3000hops (30 seconds) cycle.

Dummy Bearer

The Base Unit sends Dummy-data to the all stand-by state Handsets.

The Handsets receive that data for keeping synchronization and monitoring request from the Base Unit.

Dummy Bearer doesn't contain B-field (sound) data.

9.3. Signal Flowchart in the Whole System

Reception

CN101 of the Base Unit is connected to the TEL line, and signal is enter through the bridge diode D101. While talking, the relay (Q141) is turned ON and amplified at the Q171, then led to DSP (IC501). The DSP encodes ADPCM and TDD/TDMA with FHSS to TXMOD. The TXMOD signal is enter to IC701 of RF PART, and modulated to 2.4GHz. The 2.4GHz signal is up-converted to 5.8GHz RF signal by IC801. The RF signal is amplified by the power amplifier (IC851) and fed to Antennas.

As for the Handset, RF signal from the antenna is amplified by LNA (IC851). The amplified signal is down-converted to 2.4GHz signal by IC801 and led to IC701. The 2.4GHz is down-converted to IF signal in IC701. The IF signal passing through internal filter is demodulated into RXDATA, then enter to DSP (IC201). The DSP performs TDD/TDMA and ADPCM decoding to convert the RXDATA into the voice signal, then it is output to the speaker.

Transmission

The voice signal entering from the Handset microphone is led to DSP (IC201). The DSP encodes ADPCM and TDD/TDMA with FHSS to TXMOD. The TXMOD signal is enter to IC701 of RF PART, and modulated to 2.4GHz. The 2.4GHz signal is up-converted to 5.8GHz RF signal by IC801. The RF signal is amplified by the power amplifier (IC851) and fed to Antenna.

As for the Base Unit, RF signal from the Antennas is amplified by LNA (IC851). The amplified signal is down-converted to 2.4GHz signal by IC801 and led to IC701. The 2.4GHz is down-converted to IF signal in IC701. The IF signal passing through internal filter is demodulated into RXDATA, then enter to DSP (IC501). The DSP performs TDD/TDMA and ADPCM decoding to convert the RXDATA into the voice signal. The voice signal is amplified at the TX amplifier (Q161), then output to the TEL line CN101 through the relay (Q141) and bridge (D101).

10 EXPLANATION OF LINK DATA COMMUNICATION

10.1. Calling

When calling, a communication request DATA (CC-SETUP) is transmitted from the Handset, and a permitting DATA (CC-CONNECT) is returned from the Base Unit to it. At that time the audio path opens.

10.2. To Terminate Communication

When the OFF button on the Handset is pressed during communication, a LINK terminating DATA (CC-RELEASE) is sent to terminate the communication. Then DATA (CC-RELEASE-COM) is returned from Base Unit. Handset receives it and reset the link.

10.3. Ringing

When the bell signal is detected, the Base Unit sends "GR-PAGE-REQ (Bell start)". Then receiving the bell data from the Base Unit causes to ring the bell of the Handset.

11 BLOCK DIAGRAM (BASE UNIT_MAIN)

KX-TG5671/5672/5673 BLOCK DIAGRAM (Base Unit_Main)

12 CIRCUIT OPERATION (BASE UNIT_MAIN)

General Description:

(DSP, Flash Memory) is a digital speech/signal processing system that implements all the functions of speech compression, record and playback, and memory management required in a digital telephone answering machine.

The DSP system is fully controlled by a host processor DSP. The host processor provides activation and control of all that functions as follows.

12.1. DSP (Digital Speech/Signal Processing: IC501)

- **Voice Message Recording/Play back**

The DSP system use a proprietary speech compression technique to record and store voice message in Flash Memory. An error correction algorithm is used to enable playback of these messages from the Flash Memory.

- **DTMF Detection/Generator**

The DTMF detection is implemented by the DSP system in software. The DTMF detection is performed during Record, Play back, and Line Monitoring modes of operation.

When the DTMF data from the Handset is received, the DTMF signal is output.

- **Synthesized Voice (Pre-recorded message)**

The DSP implements synthesized Voice, utilizing the built in speech detector and a Flash Memory, which stored the vocabulary.

- **Caller ID and Call Waiting CID demodulation**

The DSP implements monitor and demodulate the FSK signals that provide CID information from the Central Office.

- **Analog Switching**

The voice signal from telephone line is transmitted to the speaker or the voice signal from speakerphone microphone is transmitted to the Telephone line, etc. They are determined by the signal path route operation of voice signal.

- **Block Interface Circuit**

RF part, LED, Key scan, Speaker, Microphone, Telephone line, LCD.

12.2. Flash Memory (IC601)

Following information data is stored.

- **Voice signal**

ex: Pre-recorded Greeting message, Incoming message

- **Settings**

ex: message numbers, ID code, Flash Time, Tone/Pulse

12.3. Power Supply Circuit

Function:

The power supply voltage from AC adaptor is converted to the desired voltage of each block.

Circuit Operation:

- Q300 and IC300: 4.0V DCDC Converter
- IC331: 3.3V Regulator

12.4. Reset Circuit

Function:

This circuit is used to initialize the microcomputer when it incorporates an AC adaptor.

Circuit Operation:

When the AC Adaptor is inserted into the unit, then the voltage is shifted by IC331 and power is supplied to the DSP. The set starts to operate when VCC goes up to 3.0V or more in the circuit voltage diagram.

Note:

(*1) The initializing time of the DSP chip is 28ms under normal conditions.

12.5. Telephone Line Interface

Telephone Line Interface Circuit:

Function

- Bell signal detection
- ON/OFF hook and pulse dial circuit
- Side tone circuit

Bell signal detection and OFF HOOK circuit:

In the idle mode, Q141 is open to cut the DC loop current and decrease the ring load. When ring voltage appears at the Tip (T) and Ring (R) leads (When the telephone rings), the AC ring voltage is transferred as follows:

T → L101 → R111 → C111 → Q111 → DSP pin 3 [BELL]

When the CPU (DSP) detects a ring signal, Q141 turns on, thus providing an off-hook condition (active DC current flow through the circuit). Following signal flow is the DC current flow.

T → L101 → D101 → Q141 → Q161 → R163 → D101 → L102 → P101 → R

ON HOOK Circuit:

Q141 is open, Q141 is connected as to cut the DC loop current and to cut the voice signal. The unit is consequently in an on-hook condition.

Pulse Dial Circuit:

Pin 59 of DSP turns Q141 ON/OFF to make the pulse dialing.

Side Tone Circuit:

Basically this circuit prevents the TX signal from feeding back to RX signal. As for this unit, TX signal feed back from Q161 is canceled by the canceller circuit of DSP.

12.6. Auto Disconnect Circuit

Function:

This circuit is used to detect the fact that another telephone connected to the same line is OFF-HOOK while the unit is in a receiving status or OGM transmitting status.

Circuit Operation:

The voltage of pin 90 of IC501 is monitored. If a parallel-connected telephone is put into OFF-HOOK status, the presence/absence of a parallel connection is determined when the voltage changes by 0.2V or more. When the set detects the parallel-connected telephone is OFF-HOOK status, the line is disconnected.

You can enable or disable the Auto Disconnect function.

See **Check Record** (P.28)

12.7. Parallel Connection Detect Circuit

Function:

In order to disable call waiting and stutter tone functions when using telephones connected in parallel, it is necessary to have a circuit that judges whether a telephone connected in parallel is in use or not. This circuit determines whether the telephone connected in parallel is on hook or off hook by detecting changes in the T/R voltage.

Circuit Operation:

Parallel connection detection when on hook:

When on hook, the voltage is monitored at pin 86 of IC501. There is no parallel connection if the voltage is 1.65 V or higher, while a parallel connection is deemed to exist if the voltage is lower.

Parallel connection detection when off hook:

When off hook, the voltage is monitored at pin 90 of IC501; the presence/absence of a parallel connection is determined when the voltage changes by 0.2 V or more.

12.8. Calling Line Identification (Caller ID)/Call Waiting Caller ID

Function:

Caller ID

The caller ID is a chargeable ID which the user of a telephone circuit obtains by entering a contract with the telephone company to utilize a caller ID service. For this reason, the operation of this circuit assumes that a caller ID service contract has been entered for the circuit being used. The data for the caller ID from the telephone exchange is sent during the interval between the first and second rings of the bell signal. The data from the telephone exchange is a modem signal which is modulated in an FSK (Frequency Shift Keying) * format. Data "1" is a 1200 Hz sine wave, and data "0" is a 2200 Hz sine wave. There are two types of the message format which can be received: i.e. the single message format and plural message format. The plural message format allows to transmit the name and data code information in addition to the time and telephone number data.

*: Also the telephone exchange service provides other formats.

● Single message format

● Plural message format

Call Waiting Caller ID

Calling Identity Delivery on Call Waiting (CIDCW) is a CLASS service that allows a customer, while off-hook on an existing call, to receive information about a calling party on a waited call. The transmission of the calling information takes place almost immediately after the customer is alerted to the new call so he/she can use this information to decide whether to take the new call.

Function:

The telephone exchange transmits or receives CAS and ACK signals through each voice RX/TX route. Then FSK data and MARK data pass the following route.

Telephone Line → CN101(T, R) → C121, C122 → R121, R122 → IC501 (93, 94).

If the unit deems that a telephone connected in parallel is in use, ACK is not returned even if CAS is received, and the information for the second and subsequent callers is not displayed on the portable Handset display.

Call Waiting Format

13 BLOCK DIAGRAM (BASE UNIT_RF PART)

KX-TG5671/5672/5673 BLOCK DIAGRAM (Base Unit_RF Part)

14 BLOCK DIAGRAM (HANDSET_RF PART)

KX-TGA560 BLOCK DIAGRAM (Handset_RF Part)

15 CIRCUIT OPERATION (RF PART)

General Description:

RF part includes Transmitter and Receiver functions. Digital signals (Mainly voice data) that come from DSP, are modulated and are transmitted. On the other hand, received signals are demodulated and go out to DSP.

15.1. Power Supply Circuit

As indicated below, the various voltages are supplied to each block.

V_PA, about 4.0V at Base Unit or 3.3V at Handset, is supplied to the Power amplifier in 5.8GHz PA circuit.

IC841 is 3.0V Regulators, and IC761 is a 2.5V Regulator. They output Vcc_5.8GHz, and Vcc_2.4GHz respectively by order of RADIO_EN signal or CON_EN signal. V_RF is approximately 4.0V (Base Unit) or 3.6V (Handset).

<Base Unit>

<Handset>

15.2. 2.4GHz Mod/Demod Circuit

IC701 incorporates all of the modulation and demodulation functions. TX Digital data (TX_DATA) from DSP is supplied to pin 27 of IC701, and then 2.4GHz TX modulated signal is output from pin1. This TX signal goes into the 5.8GHz Converter circuit. 2.4GHz RX signal from 5.8GHz Converter circuit is passed through matching circuit and supplied to pin4 of IC701, then demodulated signal (RX_DATA) comes out from pin 16. At the same time, RSSI (Received Signal Strength Indicator) outputs from the pin 14. Reference clock (13.824MHz) from DSP block is supplied to pin 11 of IC701. VCC_2.4G supplies 2.5V regulated voltage.

Note:

The exposed GND_PLATE on the bottom of the IC701 supplies the circuit ground(s) for the entire chip. It is very important that a good solder connection is made between this GND_PLATE and the ground plane of the PCB underlying the IC701.

15.3. 5.8GHz Converter Circuit

This block converts frequency of TX signal and RX signal.

IC801 includes TX-MIXER, RX-MIXER, PLL and VCO modules internally.

The VCO module is tuned by PLL synthesizer module, and generates 3.4GHz Local signal. Reference clock (13.824MHz) from DSP block is supplied to pin7 of IC701.

2.4GHz TX signal from 2.4GHz Mod/Demod circuit is supplied to pin 17 of IC801, and internal TX-MIXER multiplies it by 3.4GHz Local signal from internal VCO module, and up-converts into 5.8GHz TX signal. This 5.8GHz TX signal is output from pin 2, and goes into the 5.8GHz PA circuit.

5.8GHz RX signal from 5.8GHz LNA circuit supplied to pin 5 of IC801, and internal RX-MIXER multiplies it by 3.4GHz Local signal from internal VCO module, and down-converts into 2.4GHz RX signal. This 2.4GHz RX signal is output from pin 15, and goes into the 2.4GHz Mod/Demod circuits.

Note:

The exposed GND_PLATE on the bottom of the IC801 supplies the circuit ground(s) for the entire chip. It is very important that a good solder connection is made between this GND_PLATE and the ground plane of the PCB underlying the IC801.

15.4. 5.8GHz PA (Power Amplifier), 5.8GHz LNA (Low Noise Amplifier) and Antenna Switch Circuit

PA block amplifies power of 5.8GHz TX signal.

5.8GHz TX signal from 5.8GHz Converter circuit is filtered by 5.8GHz-BPF FL811, and amplified by Power amplifier (PA) block of IC851. After that, it is supplied to Antenna Switch block of IC851. V_PA is approximately 4.0V at Base Unit, and 3.3V at Handset.

LNA block amplifies receiving 5.8GHz signal.

5.8GHz RX signal from Antenna Switch block of IC851 amplified by LNA (Low Noise Amplifier) block of IC851 and filtered by HPF (FL821), and then supplied to 5.8GHz Converter circuit.

Antenna Switch block selects the TX 5.8GHz signal or RX 5.8G signal, and connect to Antenna terminal.

Note:

The exposed GND_PLATE on the bottom of the IC851 supplies the circuit ground(s) for the entire chip. It is very important that a good solder connection is made between this GND_PLATE and the ground plane of the PCB underlying the IC851.

<Base Unit>

IC851 includes Switches for High frequency signals, and controlled by ANT0 signal and ANT 1 signal from DSP.

DSP is checking RSSI (Received Signal Strength Indicator) signal, and selects better condition Antenna from two antennas.

At the TX mode 5.8GHz TX signal from 5.8GHz PA block leads to selected Antenna terminal, at the RX mode 5.8GHz RX signal from selected Antenna terminal leads to 5.8GHz LNA block.

<Handset>

IC851 includes Switch for High frequency signals, and controlled by PA_CONT signal and RX_EN signal from DSP. At the TX mode 5.8GHz TX signal from 5.8GHz PA block leads to Antenna terminal, at the RX mode 5.8GHz RX signal from Antenna terminal leads to 5.8GHz LNA block.

16 BLOCK DIAGRAM (HANDSET)

KX-TGA560 BLOCK DIAGRAM (Handset)

17 CIRCUIT OPERATION (HANDSET)

17.1. Construction

The circuit mainly consists of DSP and RF part as shown in the block diagram.

17.1.1. DSP: IC201

Function

- Battery Low, Power down detect circuit
- Ringer Generation
- Interface circuit

RF part, Speaker, Mic, LED, Key scan, LCD, Headset

Initialize

Note:

(*1) The initializing time of the DSP chip is 20ms under normal conditions.

17.1.2. RF part

Mainly voice signal is modulated to RF, or it goes the other way.

17.1.3. EEPROM: IC241

All setting data is stored.

ex: ID code, user setting (Phonebook, Caller ID data)

17.2. Power Supply Circuit

Voltage is supplied separately to each block.

Block Diagram (Handset Power)

17.3. Charge Circuit

When the Handset is put on the cradle of the Base Unit or the charger, the power is supplied from CHARGE+ and CHARGE- terminals to charge the battery via D353 and R366 or Q361. The voltage between CHARGE+ and CHARGE- flows R231 → Q231 → pin38 of IC201, where the charge is detected. Then IC201 calculates the battery consumption amount from the previous charge, and it controls Q361/Q362/Q363 by pin80 of IC201 until charging is complete. When charging is complete, the control pattern is switched to Trickle charging form from Operational charging form.

Charging-form

Pin 88 of IC201 monitors the battery voltage and detect BATT LOW at 3.50V.

17.4. Ringer and Handset SP-Phone

17.5. Sending Signal

The voice signal from the microphone is input to DSP (90, 91). CN331 is the headset jack. When the headphone is connected, the Q331 detect it. The input from the microphone of the Handset (MIN, MIP) is cut and the microphone signal from the headset is input to DSP (95). Also the power for the microphone is supplied from DSP (92) and the power is turned OFF on standby.

17.6. Reception Signal

The voice signal from the Base Unit is output to DSP (98). This signal is led to the headset jack (CN331). The signal through the headset jack and the other signal output from DSP (97) drives the speaker. When the headset is inserted to the jack, the voice signal is cut at the jack, so the sound does not come out from the speaker, but from the headset only.

18 CIRCUIT OPERATION (CHARGER UNIT)

The voltage from the AC adaptor is supplied to the charge circuits. Main charge (130 ~ 220mA at the Battery) of maximum 7-hours is started soon after the Handset is placed on the Charger Unit. Then it changes to Trickle charge to prevent from overcharging.

Charging form

Charging-form

• Main charge

130 ~ 220mA

• Trickle charge

130 ~ 220mA

The route for this is as follows: DC+pin of CN1→R1 ~ R12→CHARGE+pad→Handset→CHARGE-pad→DC-pin of CN1.

19 SIGNAL ROUTE

Each signal route is as follows.

SIGNAL ROUTE	IN	→	ROUTE	→	OUT

10	GND_LNA2	GND
11	NC	—
12	LNA_OUT	O

Pin	Description	I/O
13	LNA_GAIN	I
14	LNA_EN	I
15	ANTSEL_B	I
16	ANTSEL_A	I
17	PA_EN	I
18	PA_IN	I
19	VDD_PA	VDD
20	GND_ISO	GND
21	PA_OUT	VDD/O
22&23	GND_ISO	GND
24	TRSW_IN	I
	GND_PLATE	GND

Backside Terminal: GND

23 HOW TO REPLACE THE FLAT PACKAGE IC

Even if you do not have the special tools (for example, a spot heater) to remove the Flat IC, with some solder (large amount), a soldering iron and a cutter knife, you can easily remove the ICs that have more than 100 pins.

23.1. PREPARATION

- PbF (: Pb free) Solder
- Soldering Iron

Tip Temperature of 700°F ± 20°F (370°C ± 10°C)

Note: We recommend a 30 to 40 Watt soldering iron. An expert may be able to use a 60 to 80 Watt iron where someone with less experience could overheat and damage the PCB foil.

- Flux

Recommended Flux: Specific Gravity → 0.82.

Type → RMA (lower residue, non-cleaning type)

Note: See **ABOUT LEAD FREE SOLDER (PbF: Pb free)** (P.4)

23.2. FLAT PACKAGE IC REMOVAL PROCEDURE

1. Put plenty of solder on the IC pins so that the pins can be completely covered.

Note:

If the IC pins are not soldered enough, you may give pressure to the P.C. board when cutting the pins with a cutter.

2. Make a few cuts into the joint (between the IC and its pins) first and then cut off the pins thoroughly.

3. While the solder melts, remove it together with the IC pins.

When you attach a new IC to the board, remove all solder left on the land with some tools like a soldering wire. If some solder is left at the joint on the board, the new IC will not be attached properly.

23.3. FLAT PACKAGE IC INSTALLATION PROCEDURE

1. Temporarily fix the FLAT PACKAGE IC, soldering the two marked pins.

● - - - - - Temporary soldering point.

*Check the accuracy of the IC setting with the corresponding soldering foil.

2. Apply flux to all pins of the FLAT PACKAGE IC.

- - - - - Flux

3. Solder the pins, sliding the soldering iron in the direction of the arrow.

Soldering Iron

Specified Solder

23.4. BRIDGE MODIFICATION PROCEDURE

1. Lightly resolder the bridged portion.
2. Remove the remaining solder along the pins using a soldering iron as shown in the figure below.

24 CABINET AND ELECTRICAL PARTS (BASE UNIT)

Ref.No.	Part No.	Figure
A	XTW26+T12PFJ	 φ2.6 × 12mm
B	XTW26+T8PFJ	 φ2.6 × 8mm
F	XTW26+T12PFJ	 φ2.6 × 12mm
G	XTW26+T12PFJ	 φ2.6 × 12mm
H	XTW26+T12PFJ	 φ2.6 × 12mm
I	XTW26+T8PFJ	 φ2.6 × 8mm

Note:

(*1) for KX-TG5671

25 CABINET AND ELECTRICAL PARTS (HANDSET)

Note:

(*1) Attach the cushion (No. 126) to the exact location described above.

(*2) This cable is fixed by welding. Refer to **HOW TO REPLACE THE HANDSET LCD** (P.25).

29 REPLACEMENT PARTS LIST

Note:

1. RTL (Retention Time Limited)

The marking (RTL) indicates that the Retention Time is limited for this item.

After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability depends on the type of assembly and the laws governing parts and product retention.

At the end of this period, the assembly will no longer be available.

2. Important safety notice

Components identified by the Δ mark indicates special characteristics important for safety. When replacing any of these components, only use specified manufacture's parts.

3. The S mark means the part is one of some identical parts. For that reason, it may be different from the installed part.

4. ISO code (Example: ABS-94HB) of the remarks column shows quality of the material and a flame resisting grade about plastics.

5. RESISTORS & CAPACITORS

Unless otherwise specified;

All resistors are in ohms (Ω) K=1000 Ω , M=1000k Ω

All capacitors are in MICRO FARADS (μ F) P= μ F

*Type & Wattage of Resistor

Type

ERC:Solid	ERX:Metal Film	PQ4R:Chip
ERD:Carbon	ERG:Metal Oxide	ERS:Fusible Resistor
ERJ:Chip	ER0:Metal Film	ERF:Cement Resistor

Wattage

10,16:1/8W	14,25:1/4W	12:1/2W	1:1W	2:2W	3:3W
------------	------------	---------	------	------	------

*Type & Voltage Of Capacitor

Type

ECFD:Semi-Conductor	ECED,ECKD,ECBT,F1K,ECUV: Ceramic

29.2.1. Cabinet and Electrical Parts

Ref. No.	Part No.	Part Name & Description	Remarks
101	PQGP10274X6	PANEL, LCD (for KX-TGA560S)	AS-HB
101	PQGP10274X8	PANEL, LCD (for KX-TGA560B)	AS-HB

Ref. No.	Part No.	Part Name & Description	Remarks
102	PQHS10660Y	TAPE, DOUBLE SIDED (PANEL)	
103	PQKM10729Y1	CABINET BODY (for KX-TGA560S)	ABS-HB
103	PQKM10729Y2	CABINET BODY (for KX-TGA560B)	ABS-HB
104	PQGT18456Z	NAME PLATE (for KX-TGA560S)	
104	PQGT18464Z	NAME PLATE (for KX-TGA560B Made in Malaysia)	
104	PQGT18518Z	NAME PLATE (for KX-TGA560B Made in China)	
105	PQHS10658Z	SPACER, RECEIVER	
106	PQHG10720Z	RUBBER PARTS, RECEIVER	
107	LOAD02A00023	RECEIVER	
108	PQHR11105Z	GUIDE, RECEIVER	ABS-HB
109	PQHS10670Y	SPACER, CUSHION LCD	
110	PQBC10425Z2	PUSH BUTTON, NAVI KEY	ABS-HB
111	PQSX10329Z	KEYBOARD SWITCH (for KX-TGA560S)	
111	PQSX10329Y	KEYBOARD SWITCH (for KX-TGA560B)	
112	PQWE10033Z	BATTERY TERMINAL	ABS-HB
113	PQJT10225Z	CHARGE TERMINAL (L)	
114	PQJT10226Z	CHARGE TERMINAL (R)	
115	PQHR10778Z	GUIDE, SP HOLDER	ABS-HB
116	PQHG10703Z	RUBBER PARTS, SPEAKER	
117	LOAD02A00026	SPEAKER	
118	PQKE10395Z1	COVER, EARPHONE (for KX-TGA560S)	
118	PQKE10395Z3	COVER, EARPHONE (for KX-TGA560B)	
119	PQMC10496Z	MAGNETIC SHIELD, ANTENNA	
120	PQKE10394Z2	COVER, LED CAP (for KX-TGA560S)	PC+ABS-HB
120	PQKE10394Z5	COVER, LED CAP (for KX-TGA560B)	PC+ABS-HB
121	PQHR11081Y	GUIDE, LED CAP	ABS-HB
122	PQHR11080Z	OPTIC CONDUCTIVE PARTS, LED LENS	PMMA-HB
123	PQKF10715Z1	CABINET COVER (for KX-TGA560S)	ABS-HB
123	PQKF10715Z4	CABINET COVER (for KX-TGA560B)	ABS-HB
124	PQHX11414Z	PLASTIC PARTS, BATTERY LABEL	
125	HHR-PI04	BATTERY	
126	PQHE10160Z	SPACER, BATTERY	
127	PQKK10597Z1	LID, BATTERY COVER (for KX-TGA560S)	ABS-HB
127	PQKK10597Z4	LID, BATTERY COVER (for KX-TGA560B)	ABS-HB
128	PQYNTG5631SR	LID, BATTERY COVER ASS'Y (for KX-TGA560S)	ABS-HB
128	PQYNTG5633BR	LID, BATTERY COVER ASS'Y (for KX-TGA560B)	ABS-HB

29.2.2. Main P.C.Board Parts

Note:

(*1) When you have replaced IC201 or IC241, adjust X201.

Refer to **Check and Adjust X201 (Handset) Frequency (P.48)** and **Adjust Battery Low Detector Voltage (Handset) (P.48)**.

(*2) When replacing the Handset LCD, see **HOW TO REPLACE THE HANDSET LCD (P.25)**.

Memo

A0449860

30 FOR SCHEMATIC DIAGRAM

30.1. Base Unit (SCHEMATIC DIAGRAM (BASE_UNIT_MAIN))

30.1.1. Acoustic Testing Mode

Press “STOP”, “▶▶” and “^” simultaneously, and insert the plug of AC adaptor.

- No beep sound.

It is easier to measure the transmit level with acoustic testing mode.

Notes:

1. DC voltage measurements are taken with voltmeter from the negative voltage line.

Important Safety Notice:

Components identified by ⚠ mark have special characteristics important for safety. When replacing any of these components, use only the manufacturer's specified parts.

2. This schematic diagram may be modified at any time with the development of new technology.

30.2. Handset (SCHEMATIC DIAGRAM (HANDSET_MAIN))

Notes:

1. DC voltage measurements are taken with an oscilloscope or a tester with a ground.
2. The schematic diagrams and circuit board may be modified at any time with the development of new technology.

30.3. Charger Unit (SCHEMATIC DIAGRAM (CHARGER_UNIT))

Notes:

1. DC voltage measurements are taken with voltmeter from the negative voltage line.

Important Safety Notice:

Components identified by ⚠ mark have special characteristics important for safety. When replacing any of these components, use only the manufacturer's specified parts.

2. This schematic diagram may be modified at any time with the development of new technology.
